Wavelet Theory and Its Applications Randy K. Young, 2012-12-06 The continuous wavelet transform has deep mathematical roots in the work of Alberto P Calderon His seminal paper on complex method of interpolation and intermediate spaces provided the main tool for describing function spaces and their approximation properties The Calderon identities allow one to give integral representations of many natural operators by using simple pieces of such operators which are more suited for analysis These pieces which are essentially spectral projections can be chosen in clever ways and have proved to be of tremendous utility in various problems of numerical analysis multidimensional signal processing video data compression and reconstruction of high resolution images and high quality speech A proliferation of research papers and a couple of books written in English there is an earlier book written in French have emerged on the subject These books so far are written by specialists for specialists with a heavy mathematical flavor which is characteristic of the Calderon Zygmund theory and related research of Duffin Schaeffer Daubechies Grossman Meyer Morlet Chui and others Randy Young s monograph is geared more towards practitioners and even non specialists who want and probably should be cognizant of the exciting proven as well as potential benefits which have either already emerged or are likely to emerge from wavelet theory

Finite Frames Peter G. Casazza, Gitta Kutyniok, 2012-09-14 Hilbert space frames have long served as a valuable tool for signal and image processing due to their resilience to additive noise quantization and erasures as well as their ability to capture valuable signal characteristics More recently finite frame theory has grown into an important research topic in its own right with a myriad of applications to pure and applied mathematics engineering computer science and other areas The number of research publications conferences and workshops on this topic has increased dramatically over the past few years but no survey paper or monograph has yet appeared on the subject Edited

by two of the leading experts in the field Finite Frames aims to fill this void in the literature by providing a comprehensive systematic study of finite frame theory and applications With carefully selected contributions written by highly experienced researchers it covers topics including Finite Frame Constructions Optimal Erasure Resilient Frames Quantization of Finite Frames Finite Frames and Compressed Sensing Group and Gabor Frames Fusion Frames Despite the variety of its chapters source and content the book's notation and terminology are unified throughout and provide a definitive picture of the current state of frame theory With a broad range of applications and a clear full presentation this book is a highly valuable resource for graduate students and researchers across disciplines such as applied harmonic analysis electrical engineering quantum computing medicine and more It is designed to be used as a supplemental textbook self study guide or reference book

Recent Advances in Operator Theory, Operator Algebras, and their Applications Dumitru Gaspar, Israel Gohberg, Dan Timotin, Florian H. Vasilescu, Laszlo Zsido, 2006-03-30 The Romanian conferences in operator theory as they are now commonly called have started in the year 1976 as an annual workshop on operator theory held at the University of Timi soara originally only with Romanian attendance The meeting soon evolved into an international conference with an increasingly larger participation It has been organized jointly initially by the Department of Mathematics of INCREST and by the Faculty of Sciences of the University of Timi soara then since 1990 by the Institute of Mathematics of the Romanian Academy and the Faculty of Mathematics of the West University of Timi soara The venue was usually Timi soara and occasionally Herculane Bucharrest or Predeal Since 1986 the conference has been regularly held biannually at the beginning of the summer The 19th Conference on Operator Theory OT 19 took place between June 27th and July 2nd 2002 at the West University of Timi soara It is a pleasure to acknowledge the considerable financial support received through the programme EURROMMAT of the European Community under contract ICA1 CT 2000 70022 Partial support has also been provided by the Romanian Ministry of Education Research and Youth grants CERES 152 2001 and 153 2001 The full programme of the conference is included in the sequel It is worth mentioning also a special event that has taken place during the conference professor Israel Gohberg has been awarded the title of Doctor Honoris Causa of the West University of Timi soara

Semigroups of Operators: Theory and Applications A.V. Balakrishnan, 2012-12-06 These Proceedings comprise the bulk of the papers presented at the International Conference on Semigroups of Operators Theory and Control held 14-18 December 1998 Newport Beach California U S A The intent of the Conference was to highlight recent advances in the theory of Semigroups of Operators which provides the abstract framework for the time domain solutions of time invariant boundary value initial value problems of partial differential equations There is of course a firewall between the abstract theory and the applications and one of the Conference aims was to bring together both in the hope that it may be of value to both communities In these days when all scientific activity is judged by its value on dot com it is not surprising that mathematical analysis that holds no promise of an immediate commercial product line or even a software tool box is not high in research priority We are particularly pleased therefore that the National Science Foundation provided generous financial support without which this Conference would have been impossible to organize Our special thanks to Dr Kishan Baheti Program Manager
