The Sustainable Management of Land Systems Sérgio António Neves Lousada, Alfredo E. S. Borba, Julián Mora Aliseda, 2025-10-27 The sustainable management of land systems refers to the responsible and efficient use of land resources to meet present needs while ensuring their availability for future generations. It involves considering the environmental, social, and economic aspects of land use to maintain ecosystem health, biodiversity, and the well-being of communities. Policy and governance, Education and awareness. Some key principles and approaches related to the sustainable management of land systems are: Land use planning, Conservation and restoration, Sustainable agriculture, Integrated water management, Soil conservation, Stakeholder participation, Monitoring and assessment, Climate change adaptation and mitigation, Policy and governance, Education and awareness. Overall, the sustainable management of land systems requires a holistic and integrated approach that considers ecological, social, and economic factors. By adopting sustainable land management practices, we can preserve natural resources, protect biodiversity, support livelihoods, and ensure a sustainable future for generations to come. The sustainable management of land systems indeed encourages researchers to contribute valuable knowledge and insights to address the challenges and opportunities associated with land management. Researchers play a crucial role in advancing understanding, developing innovative solutions, and informing policy and practice in the field. We encourage innovative, differentiated papers that use a variety of research methods, including empirical and theoretical approaches, and allow us to define guidelines and policy-oriented development. Here are some ways in which researchers can contribute to the sustainable management of land systems, that is, some of the topics that can be developed but not limited to:

1. Scientific inquiry
2. Technology and innovation: remote sensing, geographic information systems (GIS)
3. Policy and governance support
4. Sustainable Development Goals (SDGs) and the Convention on Biological Diversity (CBD)
5. Collaborative projects
6. Capacity building and knowledge dissemination
7. Long-term monitoring and assessment
8. Transdisciplinary research

By encouraging and supporting research in the sustainable management of land systems, we can harness the power of knowledge and innovation to promote sustainable practices, inform decision-making, and achieve our sustainability goals.
