Xml Databases And The Semantic Web:

XML Databases and the Semantic Web Bhavani Thuraisingham, 2002-03-27 Efficient access to data sharing data extracting information from data and making use of the information have become urgent needs for today's corporations. With so much data on the Web, managing it with conventional tools is becoming almost impossible. New tools and techniques are necessary to provide interoperability as well as warehousing between XML Databases and the Semantic Web. Bhavani M. Thuraisingham, 2002 [Visioning and Engineering the Knowledge Society - A Web Science Perspective](#) Miltiadis D. Lytras, Ernesto Damiani, John M. Carroll, Robert D. Tennyson, David Avison, Ambjörn Naeve, Adrian Dale, Paul Lefrere, Janice Sipior, Felix Tan, Gottfried Vossen, 2009-09-29 This book, in conjunction with the volume CCIS 49, constitutes the refereed proceedings of the Second World Summit WSKS 2009 held in Chania, Crete, Greece, in September 2008. The 62 revised full papers presented were carefully reviewed and selected from 256 submissions. The papers deal with information technologies, knowledge management systems, e-business and business organizational and inter-organizational information systems for the Knowledge Society, knowledge learning, education, learning technologies and e-learning for the Knowledge Society, social and humanistic computing for the Knowledge Society, emerging technologies for the society and the humanity, culture and cultural heritage, technology for culture management, management of tourism and entertainment, tourism networks in the Knowledge Society, e-government and e-democracy in the Knowledge Society, innovation, sustainable development and strategic management for the Knowledge Society, service science, management engineering and technology, intellectual and human capital development in the Knowledge Society, advanced applications for environmental protection and green economy, management future prospects for the Knowledge Society, from foresight studies to projects and public policies, technologies and business models for the creative industries. *Semantic Web and Databases* Christoph Bussler, Val Tannen, Irini Fundulaki, 2005-02-04 This book constitutes the thoroughly refereed postproceedings of the Second International Workshop on Semantic Web and Databases SWDB 2004 held in Toronto, Canada, in August 2004 as a satellite workshop of VLDB 2004. The 14 revised full papers presented together with 2 papers by the invited keynote speakers were carefully selected during two rounds of reviewing and improvement from 47 submissions. Among the topics addressed are data semantics, semantic Web services, service-oriented computing, workflow composition, XML semantics, relational tables, ontologies, semantic Web algebra, heterogeneous data sources, context mediation, OWL ontology engineering, data integration, semantic Web queries, database queries and peer-to-peer warehouses. [Social Networks and the Semantic Web](#) Peter Mika, 2007-10-23 Science is like a tree; contrary to popular belief, both trees and science grow at their edges, not at their core. For science, this means that most of the fruitful and exciting developments are not happening at the core of established fields but are instead happening at the boundaries between such fields. This has been particularly true for Computer Science. The most interesting database developments don't happen inside the Database community but rather where databases hit Biology.

Similarly the most interesting developments in Artificial Intelligence in recent years have happened where AI met the Web. The young field of Semantic Web research has been one of the results of a number of different sub-fields of Computer Science being exposed to the challenges of the Web: databases, computational linguistics, knowledge representation, knowledge-based systems and service-oriented computing are just some of the sub-fields that are all making contributions to the Semantic Web vision, namely a Web that consists not only of links between web pages full of pictures and text but of a Semantic Web that consists of links between computer-interpretable data. Such a Semantic Web would make it possible to query and reason over integrated data sets consisting of separate pieces of information that were never intended to be linked together but that can nevertheless be fruitfully combined and integrated, sometimes even by a third party who neither wrote nor owns any of the original pieces of data, just as is possible with web pages on the current Web.

The Semantic Web Bo Leuf, 2006-02-22

The Semantic Web is an idea of World Wide Web inventor Tim Berners-Lee that the Web as a whole can be made more intelligent and perhaps even intuitive about how to serve a user's needs. Although search engines index much of the Web's content, they have little ability to select the pages that a user really wants or needs. Berners-Lee foresees a number of ways in which developers and authors singly or in collaborations can use self-descriptions and other techniques so that the context understanding programs can selectively find what users want. The Semantic Web: Crafting Infrastructure for Agency presents a more holistic view of the current state of development and deployment. This is a comprehensive reference to the rapidly developing technologies which are enabling more intelligent and automated transactions over the Internet and a visionary overview of the implications of deploying such a layer of infrastructure. A thorough examination of the Semantic Web including the following topics: web information management, languages and protocols, application and tools, and collaboration and agency. A unique volume of practical information in depth, analysis, conceptual overviews, and contextual material from professionals in the field. Features appendices of technical terms and glossary. Semantic Web resources, intellectual property issues, and lists of elements. This is essential reading for engineers, web developers, and industry professionals wishing to enhance their knowledge of recent developments. Management staff, lecturers, postgraduate and undergraduate students will also find this book appealing.

The Semantic Web Vipul Kashyap, Christoph Bussler, Matthew Moran, 2008-08-15

The Semantic Web is a vision, the idea of having data on the Web defined and linked in such a way that it can be used by machines not just for display purposes but for automation, integration, and reuse of data across various applications. However, there is a widespread misconception that the Semantic Web is a rehash of existing AI and database work. Kashyap, Bussler, and Moran dispel this notion by presenting the multi-disciplinary technological underpinnings such as machine learning, information retrieval, service-oriented architectures, and grid computing. Thus, they combine the informational and computational aspects needed to realize the full potential of the Semantic Web vision.

Richard Benjamins,Mark Musen,2005-10-17 A little over a decade has passed since the release of the rst Netscape browser In 1995 the World Wide Web was viewedlargelyas an academiccuriosity Now of course the Web is an integral part of the fabric of modern society It is impossible to imagine science education commerce or government functioning without the Web We take the Web for granted and often assume that Internet connectivity is guaranteed to all of us as a birthright Although the Web indeed has become world wide and has lost a bit of its original aura as a consequence of its ubiquity a burgeoning community of researchers and practitioners continues to work toward the next generation of the Web a Web where information will be stored in a machine processable form and where intelligent computer based agents will access and automatically combine myriad services on the Internet of the kind that are now available only to people interacting directly with their Web browsers **Semantics in Business Systems** Dave McComb,2003-11-25 Semantics in Business Systems begins with a description of what semantics are and how they affect business systems It examines four main aspects of the application of semantics to systems specifically How do we infer meaning from unstructured information how do application systems make meaning as they operate how do practitioners uncover meaning in business settings and how do we understand and communicate what we have deduced This book illustrates how this applies to the future of application system development especially how it informs and affects Web services and business rule based approaches and how semantics will play out with XML and the semantic Web The book also contains a quick reference guide to related terms and technologies It is part of Morgan Kaufmann s series of Savvy Manager s Guides Presents an easy and enjoyable introduction to semantics in the context of business IT systems Articulates the business value of semantics while providing relevant introductory technical background Describes the semantic underpinnings of data modeling business rules enterprise integration and Web services Contains a handy quick reference guide to technologies and terminology For more information links and discussions go to

www.savvymanagers.com Handbook of Semantic Web Technologies John Domingue, Dieter Fensel, James A. Hendler, 2011-06-19 After years of mostly theoretical research Semantic Web Technologies are now reaching out into application areas like bioinformatics eCommerce eGovernment or Social Webs Applications like genomic ontologies semantic web services automated catalogue alignment ontology matching or blogs and social networks are constantly increasing often driven or at least backed up by companies like Google Amazon YouTube Facebook LinkedIn and others The need to leverage the potential of combining information in a meaningful way in order to be able to benefit from the Web will create further demand for and interest in Semantic Web research This movement based on the growing maturity of related research results necessitates a reliable reference source from which beginners to the field can draw a first basic knowledge of the main underlying technologies as well as state of the art application areas This handbook put together by three leading authorities in the field and supported by an advisory board of highly reputed researchers fulfils exactly this need It is the first dedicated reference work in this field collecting contributions about both the technical foundations of the Semantic Web as well as their main usage in other scientific fields like life sciences engineering business or education **Berkshire Encyclopedia of Human-computer Interaction** William Sims Bainbridge, 2004 Presents a collection of articles on human computer interaction covering such topics as applications methods hardware and computers and society **Semantics of a Networked World. Semantics for Grid Databases** Mokrane Bouzeghoub, Carole Goble, Vipul Kashyap, Stefano Spaccapietra, 2004-10-14 The explosion in data exchange fostered by the success of the Web has restated semantics as a kernel issue in the development of services providing data and formation to users and applications worldwide This newly designated conference series on Semantics for the Networked World uni es into a single framework the previous series on Database Semantics and Visual Database Systems that the IFIP WG 2.6 has been organizing since 1985 Whereas the intent of the conference series is to explore interesting research issues related to semantics the theme for the 2004 edition is Semantics for Grid Databases Grid computing a new field concentrating on flexible secure coordinated resource sharing among dynamic collections of individuals institutions and resources also referred to as virtual organizations has gathered momentum in the context of providing shared infrastructures for large scale scientific computations and data analysis Similarly P2P computing has attracted substantial attention Currently attention is devoted to the provision of middleware services to make computational resources interoperable at the technical level and to increase the efficiency of use of physical resources However as Grid and P2P computing infrastructures are being increasingly adopted they are likely to have typical problems of information overload that manifest themselves in any large scale infrastructure for information and application sharing e.g. the WWW The need for resource discovery application and service interoperability integration and composition manifest themselves in these infrastructures The ability to interoperate at the semantic level will largely determine the continued success and utilization of these infrastructures **Enabling Collaboration on Semiformal**

Mathematical Knowledge by Semantic Web Integration C. Lange, 2011-10-14 Mathematics is becoming increasingly collaborative but software does not sufficiently support that Social Web applications do not currently make mathematical knowledge accessible to automated agents that have a deeper understanding of mathematical structures Such agents exist but focus on individual research tasks such as authoring publishing peer review or verification instead of complex collaboration workflows This work effectively enables their integration by bridging the document oriented perspective of mathematical authoring and publishing and the network perspective of threaded discussions and Web information retrieval This is achieved by giving existing representations of mathematical and relevant related knowledge about applications projects and people a common Semantic Web foundation Service integration is addressed from the two perspectives of enriching published documents by embedding assistive services and translating between different knowledge representations inside knowledge bases A usability evaluation of a semantic wiki that coherently integrates knowledge production and consumption services points out the remaining challenges in making such heterogeneously integrated environments support realistic workflows The results of this thesis will soon also enable collaborative acquisition of new mathematical knowledge as well as the contributions of existing knowledge collections of the Web of Data **Database and Expert Systems**
