Abstractions and Embodiments Janet Abbate, Stephanie Dick, 2022-08-30 Cutting edge historians explore ideas communities and technologies around modern computing to explore how computers mediate social relations Computers have been framed both as a mirror for the human mind and as an irreducible other that humanness is defined against depending on different historical definitions of humanness They can serve both liberation and control because some people's freedom has historically been predicated on controlling others Historians of computing return again and again to these contradictions as they often reveal deeper structures Using twin frameworks of abstraction and embodiment a reformulation of the old mind/body dichotomy this anthology examines how social relations are enacted in and through computing The authors examining Abstraction revisit central concepts in computing including algorithm program clone and risk In doing so they demonstrate how the meanings of these terms reflect power relations and social identities The section on Embodiments focuses on sensory aspects of using computers as well as the ways in which gender race and other identities have shaped the opportunities and embodied experiences of computer workers and users Offering a rich and diverse set of studies in new areas the book explores such disparate themes as disability the influence of the punk movement working mothers as technical innovators and gaming behind the Iron Curtain Abstractions and Embodiments reimagines computing history by questioning canonical interpretations foregrounding new actors and contexts and highlighting neglected aspects of computing as an embodied experience It makes the profound case that both technology and the body are culturally shaped and that there can be no clear distinction between social intellectual and technical aspects of computing Contributors Janet
