Yuasa NP, NPIL, SWL, FXII, RE, EN, ENL, UXL and UXF installation, Commissioning and Maintenance Guide

1.0 Storage

If the batteries are **not** to be installed immediately, keep them boxed and store in a cool, clean and dry place.

If the batteries are to be stored for six months or more they will need a supplementary charge prior to installation as outlined in Section 3.

2.0 Unpacking and Inspection

DANGER

Batteries are electrically live at all times. Do not short circuit the battery terminals.

Inspect the battery consignment for obvious signs of transit damage. Ensure the consignment has all items listed on the advice note or invoice, i.e. batteries, cables, shrouds etc.

Unpack each battery taking care not to drop on the terminals. Inspect each battery for physical damage such as cracks or distortion of the case and terminals.

Measure the battery open circuit terminal voltage which should be > 2.1 volts/cell (12.6 volts for a 6 cell battery). If any batteries are lower they will need a supplementary charge prior to installation.

3.0 Supplementary Charge

To ensure maximum service life a supplementary charge may be required prior to installation. Apply a supplementary charge if:

1. The batteries have been in storage 6 months or more.
2. The battery open circuit voltage is under 2.1 volts per cell.
