 1 Undermining Repairs Bridge Inspection Practices George Hearn, National Cooperative Highway Research
 Program, 2007 This synthesis reports bridge inspection practices in the United States and selected foreign countries The
 synthesis is a collection of information on formal inspection practices of departments of transportation DOTs These are
 primarily visual inspections and they provide data to bridge registries and databases For U S inspection practices this
 synthesis reports on inspection personnel inspection types and inspection quality control and quality assurance Staff titles
 and functions in inspection programs are reported together with qualifications and training of personnel formation of
 inspection teams and assignment of teams to bridges Inspection types are described in terms of their scope methods and
 intervals Quality control and quality assurance programs are reviewed in terms of the procedures employed staff involved
 quality measurements obtained and the use of quality findings in DOT inspection programs Foreign practices are presented
 in the same organization of inspection personnel types and quality programs Comparisons of U S and foreign inspection
 practices are included Information was obtained from a questionnaire sent to U S state transportation departments similar
 questionnaires modified individually for transportation agencies in selected foreign countries and formal documents used by
 transportation departments and agencies These documents primarily included bridge inspection manuals inspection training
 manuals and technical memoranda but also included blank forms for inspections DOTs job descriptions for inspectors and
 descriptions of inspection training courses Overall this synthesis includes information from forty U S state transportation
 departments and from roads agencies in eight foreign nations Denmark France Finland Germany Norway South Africa
 Sweden and the United Kingdom The synthesis also includes in an appendix information from a few provincial and municipal
 transport agencies in Canada Underwater Bridge Maintenance and Repair Ronald L. Purvis, 1994 This synthesis on
 underwater bridge maintenance and repair will be of special interest to bridge maintenance engineers and others involved

with repair of bridge elements located below the waterline and in the splash zone Procedures for correctly assessing the problem and engineering the repair within the constraints of individual situations including bridge scour considerations are described Protection maintenance and repair of concrete masonry steel and timber bridge foundation elements are also addressed This synthesis updates the maintenance and repair portion of NCHRP Synthesis 88 Underwater Inspection and Repair of Bridge Substructures This report of the Transportation Research Board identifies and describes current practices and innovative repair techniques for problems associated with settlement scour and deterioration of underwater bridge elements The synthesis considers various types of protection maintenance and repair work on bridge substructures both underwater and in the splash zone and includes techniques and their effectiveness Current research in the topic area and critical research needs are also identified A limited bibliography is also provided

Image-Based Damage Assessment for Underwater Inspections Michael O'Byrne, Bidisha Ghosh, Franck Schoefs, Vikram Pakrashi, 2018-07-18 Inspection is crucial to the management of ageing infrastructure Visual information on structures is regularly collected but very little work exists on its organised and quantitative analysis even though image processing can significantly enhance these inspection processes and transfer real financial and safety benefits to the managers owners and users Additionally new opportunities exist in the fast evolving sectors of wind and wave energy to add value to image based inspection techniques This book is a first for structural engineers and inspectors who wish to harness the full potential of cameras as an inspection tool It is particularly directed to the inspection of offshore and marine structures and the application of image based methods in underwater inspections It outlines a set of best practice guidelines for obtaining imagery then the fundamentals of image processing are covered along with several image processing techniques which can be used to assess multiple damage forms crack detection corrosion detection and depth analysis of marine growth on offshore structures The book provides benchmark performance measures for these techniques under various visibility conditions using an image repository which will help inspectors to envisage the effectiveness of the techniques when applied MATLAB scripts and access to the underwater image repository are included so readers can run these techniques themselves Practising engineers and managers of infrastructure assets are guided in image processing based inspection Researchers can use this book as a primer and it also suits advanced graduate courses in infrastructure management or on applied image processing
