Water, Sanitation and Hygiene Standards for Schools in Low-cost Settings John Adams, Jamie Bartram, Jackie Sims, Yves Chartier, World Health Organization, 2009 Diseases related to inadequate water sanitation and hygiene are a huge burden in developing countries It is estimated that 88% of diarrhoeal disease is caused by unsafe water supply and inadequate sanitation and hygiene WHO 2004c Many schools serve communities that have a high prevalence of diseases related to inadequate water supply sanitation and hygiene and where child malnutrition and other underlying health problems are common Schools particularly those in rural areas often completely lack drinking water and sanitation and handwashing facilities alternatively where such facilities do exist they are often inadequate in both quality and quantity Schools with poor water sanitation and hygiene conditions and intense levels of person to person contact are high risk environments for children and staff and exacerbate children s particular susceptibility to environmental health hazards Children s ability to learn may be affected by inadequate water sanitation and hygiene conditions in several ways These include helminth infections which affect hundreds of millions of school age children long term exposure to chemical contaminants in water e g lead and arsenic diarrhoeal diseases and malaria infections all of which force many schoolchildren to be absent from school Poor environmental conditions in the classroom can also make both teaching and learning very difficult Girls and boys are likely to be affected in different ways by inadequate water sanitation and hygiene conditions in schools and this may contribute to unequal learning opportunities Sometimes girls and female teachers are more affected than boys because the lack of sanitary facilities means that they cannot attend school during menstruation The international policy environment increasingly reflects these issues Providing adequate levels of water supply sanitation and hygiene in schools is of direct relevance to the United Nations UN Millennium Development Goals of achieving universal primary education promoting gender equality and reducing child mortality It is also supportive of other goals especially those on major diseases and infant mortality p iii
