in Mexico Hilda R. Guerrero García Rojas, 2018-05-23 Mexico is currently facing severe problems with water availability wastage and contamination The most contaminated and over exploited water resources are concentrated in the most populated areas of the country where water is scarcer and its quality makes it unsuitable for a variety of uses including human consumption At the same time it is indisputable that water quality is a determining factor in public health and ecosystems The significant growth in population and industry results in a high demand for water along with contaminating discharges few of which are treated and the impact upon the ecosystems is evident This book addresses all these topics in a single volume taking into account the challenges presented by the economic institutional and environmental considerations in Mexico s water policy framework India's Water Future in a Changing Climate Kuppannan Palanisami, Udaya Sekhar Nagothu, 2024-04-18 This book comprehensively addresses the most challenging water issues in India in a changing climate for the first time and suggests potential solutions It has been observed that over the past two decades water usage has significantly increased in India due to population growth economic development and an increase in multiple uses of water including irrigation hydropower industries domestic consumption fisheries eco system needs and the environment India s water future is mainly influenced by rising food demand to feed the increasing population emerging climate change impacts on agriculture and the water sector the increasing cost of interventions poor cost recovery the low level of technology adoption and weak water policy Artificial recharge of the groundwater aquifers improved water use efficiency and the groundwater energy agriculture nexus are important for the future of India s water planning and are well addressed in this book Also covered are climate smart practices wastewater reuse methods and digital water and agriculture tools The book further analyses improved irrigation modernization plans and explores the potential for micro irrigation expansion including canal and tank irrigation systems in the country Overall this book is one of the first of its kind to present India s future water and irrigation issues with field based solutions providing lessons learnt from successful national and international case studies The volume is a useful resource for a wide range of readers including policy makers planners donors implementing agencies and researchers in the water sector **The Oxford Handbook of Food, Water and Society** Tony Allan, Brendan

Bromwich, Martin Keulertz, Anthony Colman, 2019-09-27 Food water and society what is managed by whom and with what impacts Our food supply chains are at risk Water resources sometimes scarce often damaged and always under valued are among the major reasons why food and water security rank high every year in the World Economic Forum s major global risk analysis A stable and sustainable food system is critical to society s survival This Handbook shows that keeping the food system stable comes at the expense of the environment especially of water resources and those who consume and manage them The way the food system operates reflects hard political realities Rather than pay for the environmental costs of sustainable production society expects food at ever lower prices Governments reflect their electorates in this regard Given that farm production may account for as little as 10% of the food value chain in wealthy economies it is striking that governments have been unwilling or unable to put in place the essential laws and accountability that would enable famers to ensure both production and stewardship Corporate food traders food manufacturers and retailers on the other hand operate in markets that make profits and pay taxes But these corporations are not contractually bound to utilize highly nutritious sustainably produced food commodities The articles in this Oxford Handbook have been written by water and food system scientists and professionals including farmers rarely heard voices who understand the problems of food producers food manufacturers and regulating markets and public policy The articles address the blind spots of society and its public policymakers demonstrating the importance of informing society about the consequences of its food preferences and the heroic challenges it is beginning to face The damage we are doing to our water and soil ecosystems is as important as the damage we do to the atmosphere Impressed by the technical and organizational advances of the past two centuries the contributors featured in this book also take note of where economic inefficiencies and cultural deadlock in a 4 000 year old system are putting our critical food supply chains at risk

Water Resources Joseph Holden, 2019-11-01 Now in its second edition *Water Resources An Integrated Approach* provides students with a comprehensive overview of natural processes associated with water and the modifications of these processes by humans through climate change and land management water related health issues engineering approaches to water and socio economic processes of huge importance to water resources The book contains chapters written by 24 specialist contributors providing expert depth of coverage to topics The text introduces the basic properties of water and its importance to society and the nature of the different regional imbalances between water resource availability and demand It guides the reader through the changing water cycle impacted by climate and land management water flows in river basins surface water quality groundwater and aquatic ecosystems and covers the role of water in human health and associated hazards before turning to engineering solutions to water and wastewater treatment and reuse The book deals with physical and social management strategies required for water resource planning the economics of water and treatment of issues associated with conflict over water The concept of virtual water is covered before the text concludes with a chapter considering the challenges of predicting future water issues in a rapidly changing

world and where environmental systems can behave in a non linear way The need to work across disciplines to address challenges that are connected at both local and global scales is highlighted Water Resources also includes global examples from both the developing and developed world There are 58 case study boxes Each chapter is supplemented with these case studies and with reflective questions project ideas and further reading as well as links to a glossary of terms The book is richly illustrated throughout with over 160 full colour diagrams and photographs The text provides a novel interdisciplinary approach to water in a changing world from an environmental change perspective and interrelated social political and economic dimensions It will be an indispensable guide to undergraduates studying water resources and management geography of water and water in the environment

The State of Food and Agriculture 2020 Food and Agriculture Organization of the United Nations ,2020-11-26 Intensifying water constraints threaten food security and nutrition Thus urgent action is needed to make water use in agriculture more sustainable and equitable Irrigated agriculture remains by far the largest user of freshwater but scarcity of freshwater is a growing problem owing to increasing demand and competition for freshwater resources At the same time rainfed agriculture is facing increasing precipitation variability driven by climate change These trends will exacerbate disputes among water users and inequality in access to water especially for small scale farmers the rural poor and other vulnerable populations The State of Food and Agriculture 2020 presents new estimates on the pervasiveness of water scarcity in irrigated agriculture and of water shortages in rainfed agriculture as well as on the number of people affected It finds major differences across countries and also substantial spatial variation within countries This evidence informs a discussion of how countries may determine appropriate policies and interventions depending on the nature and magnitude of the problem but also on other factors such as the type of agricultural production system and countries level of development and their political structures Based on this the publication provides guidance on how countries can prioritize policies and interventions to overcome water constraints in agriculture while ensuring efficient sustainable and equitable access to water

Water Law, Policy and Economics in Italy Paolo Turrini, Antonio Massarutto, Marco Pertile, Alessandro de Carli, 2021-05-12 This book provides the first comprehensive overview of the most important water related issues that centre on Italy analysed from several disciplinary perspectives such as hydrology economics law sociology environmental sciences and policy studies in order to promote full understanding of the challenges the country is facing and the ways it could best tackle them Despite the misconception that Italy is a water scarce country is in fact quite rich in water resources Such resources however are unevenly distributed over the Italian territory Italy's northern regions rely on quite an abundant quantity of freshwater whereas in the southern area water endowment is limited Moreover climatic differences between North and South contribute to widen the divide This disparity has notable consequences of socio economic character some of which in turn feed back into the environmental conditions of Italian regions pollution floods landslides and droughts are among the problems affecting the country There are numerous features

of water use and consumption that distinguish Italy from other comparable countries such as the significant role played by agriculture a water intensive activity a lead position in the consumption of bottled water lower than average prices of water and a far from optimal efficiency of waterworks All such aspects and many others make Italy an essential case study

Economics for a Fragile Planet Edward Barbier, 2022-03-31 In a world of growing environmental risks and ecological scarcities ensuring a safe Anthropocene for humankind is essential Managing an increasingly fragile planet requires new thinking on markets institutions and governance built on five principles ending the underpricing of nature fostering collective action accepting absolute limits attaining sustainability and promoting inclusivity Rethinking economics and policies in this way can help to overcome the global challenges posed by climate change biodiversity loss freshwater scarcity and deteriorating marine and coastal habitats It requires decoupling wealth creation from environmental degradation through business policy and financial actions aimed at better stewardship of the biosphere In this book renowned environmental economist Edward Barbier offers a blueprint for a greener and more inclusive economy and outlines the steps we must take now to build a post COVID world that limits environmental threats while sustaining per capita welfare **OECD**

Environmental Performance Reviews: Chile 2016 OECD, Economic Commission for Latin America and the Caribbean, 2016-07-21 This report is the second Environmental Performance Review of Chile It evaluates progress towards sustainable development and green growth with a focus on climate change and biodiversity conservation and sustainable use

Challenges of the New Water Policies for the XXI Century Enrique Cabrera,Ricardo Cobacho,2004-11-23 The concept of sustainable development appeared almost twenty years ago adapting traditional policies to new circumstances and promoting progress capable of satisfying the necessities of both present and future generations It is widely believed that the need for a proper and sustainable management of water will be a problem which will confront society in the 21st century In this publication the main political aspects are successively developed including the EU Water Framework Directive the globalization and privatization of fresh water and the case of the new Australian structure for water regulation The second part of the book is devoted to more practical aspects from the real effects of climate change to the various implications of water sustainability on agriculture and cities devoting particular attention to the experience of the Environment Agency in UK Finally the last chapter delves into the economic aspects of the different approaches and the points to take into account when they are to be translated to the final water tariff

Irrigation Water Pricing François Molle,Jeremy Berkoff,2007-01-01 Much hope has been vested in pricing as a means of helping to regulate and rationalize water management notably in the irrigation sector The pricing of water has often been applied universally using general and ideological policies and not considering regional environmental and economic differences Almost 15 years after the emphasis laid at the Dublin and Rio conferences on treating water as an economic good a comprehensive review of how such policies have helped manage water resources an irrigation use is necessary The case studies presented here offer a reassessment of current policies by evaluating their objectives and constraints and often

demonstrating their failure by not considering the regional context They will therefore contribute to avoiding costly and misplaced reforms and help design water policies that are based on a deeper understanding of the factors which eventually dictate their effectiveness *Regulatory Frameworks for Water Resources Management* Salman M. A. Salman, Daniel D. Bradlow, 2006-01-01 This title examines how regulatory frameworks have addressed the various basic issues related to water resources management and provides a comparative analysis of those issues It elicits and discusses what it considers are the essential elements for a regulatory framework for water resources management and identifies some emerging trends

The Business of Water and Sustainable Development Jonathan Chenoweth, Juliet Bird, 2018-05-08 This title examines the role of privatization technology and multi sectoral partnerships to provide answers to one of the most pressing environmental and social problems of the twenty first century how to provide access to safe drinking water and adequate sanitation for some 2 billion of the world s poor in the next 15 years Pricing Irrigation Water Yacov Tsur, 2010-09-30 As globalization links economies the value of a country s irrigation water becomes increasingly sensitive to competitive forces in world markets Water policy at the national and regional levels will need to accommodate these forces or water is likely to become undervalued The inefficient use of this resource will lessen a country s comparative advantage in world markets and slow its transition to higher incomes particularly in rural households While professionals widely agree on what constitutes sound water resource management they have not yet reached a consensus on the best ways of implementing policies Policymakers have considered pricing water a debated intervention in many variations Setting the price right some say may guide different types of users in efficient water use by sending a signal about the value of this resource Aside from efficiency itself an important policy objective equity accessibility and implementation costs associated with the right pricing must be considered Focusing on the examples of China Mexico Morocco South Africa and Turkey Pricing Irrigation Water provides a clear methodology for studying farm level demand for irrigation water This book is the first to link the macroeconomics of policies affecting trade to the microeconomics of water demand for irrigation and in the case of Morocco to link these forces to the creation of a water user rights market This type of market reform the contributors argue will result in growing economic benefits to both rural and urban households Sustainable Management of Water in Agriculture Issues and Policies - The Athens Workshop OECD, 1998-07-17 This Athens Workshop helped to illustrate what needs to be done to manage water sustainably in agriculture in particular through reviewing the experiences in OECD countries
