Toward A Cognitive Semantics Concept Structuring Systems Language Speech And Communication Volume 1:

Toward a Cognitive Semantics Leonard Talmy, 2000-09-11 V 1 concept structuring systems V 2 Typology and process in concept structuring Toward a Cognitive Semantics Leonard Talmy, 2000-09-11 In this two volume set Talmy approaches the question of how language organizes conceptual material both at a general level and by analyzing a crucial set of particular conceptual domains space and time motion and location causation and force interaction and attention and viewpoint One of a two volume set defining the field of cognitive semantics Leonard Talmy approaches the question of how language organizes conceptual material both at a general level and by analyzing a crucial set of particular conceptual domains space and time motion and location causation and force interaction and attention and viewpoint Talmy maintains that these are among the most fundamental parameters by which language structures conception By combining these conceptual domains into an integrated whole Talmy shows we advance our understanding of the overall conceptual and semantic structure of natural language Volume one examines the fundamental systems by which language shapes concepts

Toward a Cognitive Semantics Leonard Talmy, 2000-09-11 V 1 concept structuring systems V 2 Typology and process in concept structuring **Toward a Cognitive Semantics** Leonard Talmy, 2000 Structuring the Lexicon Dagmar Divjak, 2010 Structuring the Lexicon presents a cognitively realistic clustered model for near synonymy that explicitly addresses the question of how semantic knowledge is distributed along the continuum from grammar to lexicon Usage based in nature it proposes **Conceptual Transfer as an Areal Factor** Stefanie Siebenhütter, 2019-11-18 By analyzing conceptual transfer this volume offers new insight in areal linguistics Mainland Southeast Asia unifies great linguistic richness consisting of numerous languages and countless varieties of genetically diverse language families Nevertheless the area is known as a prime example for linguistic convergence Exemplified by spatial reference in Thai Khmer Lao and Vietnamese this study reveals conceptual borrowing due to language contact as an areal defining feature The results from the field based data analysis may help answer what extent cultural impact can be used as evidence for the existence of linguistic areas A speaker's cultural background might have a stronger impact on the choice of spatial language encoding than expected Method and structure of argumentation can provide a model for similar questions addressing the existence of linguistic areas as well as to other cognitive dimensions within the Southeast Asian area under consideration Therefore the study can be seen as a significant contribution to analyze possibly existing conceptual areas empirically and exemplarily Additionally the investigation can serve as an important complement to empirical assumptions of conceptual transfer *Presumptive Meanings* Stephen C. Levinson, 2000-04-24 This is the first extended discussion of preferred interpretation in language understanding integrating much of the best research in linguistic pragmatics from the last two decades When we speak we mean more than we say In this book Stephen C Levinson explains some general processes that underlie presumptions in communication This is the first extended discussion of preferred interpretation in language understanding integrating much

of the best research in linguistic pragmatics from the last two decades Levinson outlines a theory of presumptive meanings or preferred interpretations governing the use of language building on the idea of implicature developed by the philosopher H P Grice Some of the indirect information carried by speech is presumed by default because it is carried by general principles rather than inferred from specific assumptions about intention and context Levinson examines this class of general pragmatic inferences in detail showing how they apply to a wide range of linguistic constructions This approach has radical consequences for how we think about language and communication

Sentence Comprehension David J. Townsend, Thomas G. Bever, 2001 Using sentence comprehension as a case study for all of cognitive science David Townsend and Thomas Bever offer an integration of two major approaches the symbolic computational and the associative connectionist The symbolic computational approach emphasizes the formal manipulation of symbols that underlies creative aspects of language behavior The associative connectionist approach captures the intuition that most behaviors consist of accumulated habits The authors argue that the sentence is the natural level at which associative and symbolic information merge during comprehension The authors develop and support an analysis by synthesis model that integrates associative and symbolic information in sentence comprehension This integration resolves problems each approach faces when considered independently The authors review classic and contemporary symbolic and associative theories of sentence comprehension and show how recent developments in syntactic theory fit well with the integrated analysis by synthesis model They offer analytic experimental and neurological evidence for their model and discuss its implications for broader issues in cognitive science including the logical necessity of an integration of symbolic and connectionist approaches in the field

Toward a Cognitive Semantics Leonard Talmy, 2000 Design Patterns in Fluid Construction Grammar Luc Steels, 2011 Construction Grammar is enthusiastically embraced by a growing group of linguists who find it a natural way to formulate their analyses But so far there is no widespread formalization of construction grammar with a solid computational implementation Fluid Construction Grammar attempts to fill this gap It is a fully operational computational framework capturing many key concepts in construction grammar The present book is the first extensive publication describing this framework In addition to general introductions it gives a number of concrete examples through a series of linguistically challenging case studies including phrase structure case grammar and modality The book is suited both for linguists who want to know what Fluid Construction Grammar looks like and for computational linguists who may want to use this computational framework for their own experiments or applications
