K. Otto, 2012-10-23 Psychology is of interest to academics from many fields as well as to the thousands of academic and clinical psychologists and general public who can't help but be interested in learning more about why humans think and behave as they do. This award-winning twelve-volume reference covers every aspect of the ever-fascinating discipline of psychology and represents the most current knowledge in the field. This ten-year revision now covers discoveries based in neuroscience, clinical psychology's new interest in evidence-based practice and mindfulness, and new findings in social, developmental, and forensic psychology. *Neurolaw* Sjors Ligthart, Dave van Toor, Tijs Kooijmans, Thomas Douglas, Gerben Meynen, 2021-05-05 This edited book provides an in-depth examination of the implications of neuroscience for the criminal justice system. It draws together experts from across law, neuroscience, medicine, psychology, criminology, and ethics and offers an important contribution to current debates at the intersection of these fields. It examines how neuroscience might contribute to fair and more effective criminal justice systems and how neuroscientific insights and information can be integrated into criminal law in a way that respects fundamental rights and moral values. The book's first part approaches these questions from a legal perspective, followed by ethical accounts in part two. Its authors address a wide range of topics and approaches, some more theoretical like those regarding the foundations of punishment, others are more practical like those concerning the use of brain scans in the courtroom. Together they illustrate the thoroughly interdisciplinary nature of the debate in which science, law, and ethics are closely intertwined. It will appeal in particular to students and scholars of law, neuroscience, criminology, socio-legal studies, and philosophy. Warburton, Stephen M. Stahl, 2016-04-28 The association between violence and mental illness is well studied yet remains highly controversial Currently there does appear to be a trend of increasing violence in hospital settings including both civilly and forensically committed populations In fact physical aggression is the primary reason for admission to many hospitals Given that violence is now often both a reason for admission and a barrier to discharge there is a pressing need for violence to be re conceptualized as a primary medical condition not as the by product of one Furthermore treatment settings need to be enhanced to address the new types of violence exhibited in inpatient environments and this modification needs to be geared toward balancing safety with treatment This book focuses on violence from assessment through underlying neurobiology to treatment and other recommendations for practice This will be of interest to forensic psychiatrists general adult psychiatrists psychiatric residents psychologists psychiatric social workers and rehabilitation therapists
