

Half-Life Lab

Before this begins, find your other group and pass this document to a third, preexisting, group of your choice or print this page.

Purpose

The purpose of this hands-on lab is to model the concept of half-life using a simple, inexpensive radioactive source.

Materials

- 100 M&M's candies, pretzels, or other small, countable items with two distinct sides
- container or other small bag/pot to hold

Procedure

1. Place 100 candies in the clear bag, closed end up. The candies will stand for atoms of a hypothetical radioactive element.
2. Cover the bag and shake it vigorously for three seconds. This is one time interval.
3. Remove the lid and shake out any candies pointed that face that are thus "decaying" (pointed side down). These candies represent the atoms that "disintegrated" during the time interval. Count and record the number until the number of "disposed" atoms and the number of remaining, not disposed, atoms.
4. Continue repeating steps two and three until all atoms have "disintegrated" or you have reached 10 seconds in the time limit.
5. Repeat the entire experiment (steps 1-4) at least 5 times and record all data.
