Cognitive Lexicography Carolin Ostermann, 2015-07-31 English lexicography and linguistics have always shared close ties yet the potential of cognitive linguistics for lexicography has only been hesitantly acknowledged in the literature This is what cognitive lexicography attempts to change by using insights gained in cognitive semantic research for the development of new dictionary features After a short survey of the history and practice of English monolingual learner lexicography as well as an outline of the relationship between linguistics and lexicography three new dictionary features are developed They cover three different cognitive semantic theories as well as three different parts of the monolingual dictionary entry each time for a new set of lexemes Frame semantics conceptual metaphor theory as well as cognitive conceptions of polysemy are used to create a new example section for agentive nouns a new defining structure for emotion terms and a new microstructural arrangement for particle entries Dictionary analyses on all as well as user studies on two of the features complement these suggestions The monograph thus presents a new approach to lexicography that incorporates into its description of lexical items how humans perceive and conceptualise language *A Study on Form-meaning Relation from the Neuro-cognitive Perspective* Zhang Shiqian, 2025-03-17 Under the perspective of the Embodied Language of Cognition Glenberg 1997 Barsalou 1999 Anderson 2003 this book proposes a theoretical framework hypothesis the form meaning relation in language shall be a three dimensional interactive relation between body the sensory motor system brain the mental network of the experiential knowledge form the language expression system rather than be a two dimensional relation between meaning and form The main objective of the present book is to test the feasibility of the body brain form approach i e whether it can effectively explain the cognitive operation and the usage distribution of the language system Taking the obtaining event as an example this book builds a corpus of obtaining verbs and constructions and uses the Body Brain Form approach to explain the three dimensional construal processes from the source of specific meanings i e the sensory motor practices to specific constructions with brain experiential knowledge being the joint between the two The quantitative analysis proves the rationality and accuracy of this approach in predicting the usage distribution of different obtaining constructions Besides the Cognitive Event Frame Cheng 2019 2020 is also adopted to formulate the core and elaborated conceptual contents of different events proving the efficiency and flexibility of this approach in formulizing the contents of the experiential knowledge network **Natural Language Understanding and Cognitive Robotics** Masao Yokota, 2019-12-06 In the not so distant future we can expect a world where humans and robots coexist and interact with each other For this to occur we need to understand human traits such as seeing hearing thinking speaking etc and institute these traits in robots The most essential feature necessary for robots to achieve is that of integrative multimedia understanding IMU which occurs naturally in humans It allows us to assimilate pieces of information expressed through different modes such as speech pictures gestures etc The book describes how robots acquire traits like natural language understanding NLU as the central part of

IMU Mental image directed semantic theory MIDST is its core and is based on the hypothesis that NLU is essentially the processing of mental image associated with natural language expressions namely mental image based understanding MBU MIDST is intended to model omnisensory mental image in human and to afford a knowledge representation system in order for integrative management of knowledge subjective to cognitive mechanisms of intelligent entities such as humans and robots based on a mental image model visualized as Loci in Attribute Spaces and its description language Lmd mental image description language to be employed for predicate logic with a systematic scheme for symbol grounding This language works as an interlingua among various kinds of information media and has been applied to several versions of the intelligent system interlingual understanding model aiming at general system IMAGES Its latest version i e conversation management system CMS simulates MBU and comprehends the user s intention through dialogue to find and solve problems and finally provides a response in text or animation The book is aimed at researchers and students interested in artificial intelligence robotics and cognitive science Based on philosophical considerations the methodology will also have an appeal in linguistics psychology ontology geography and cartography Key Features Describes the methodology to provide robots with human like capability of natural language understanding NLU as the central part of IMU Uses methodology that also relates to linguistics psychology ontology geography and cartography Examines current trends in machine translation

Law and Cognitive Linguistics Mateusz Zeifert, 2024-10-10 This book advances the prototype theory of categorisation within a legal context The work adopts a multidisciplinary approach and draws on insights from cognitive psychology cognitive linguistics and analytic philosophy to discuss semantic problems present in law Designed as a bridge between cognitive linguistics and legal theory it argues that categorisation is a crucial cognitive operation for the application of law and that theories of categorisation are relevant to legal theory It makes the case that the prototype approach is better suited than more formal approaches usually utilised in jurisprudence to explaining many familiar linguistic problems found in law such as vagueness polysemy the flexibility of meaning the generality of language context dependence of meaning linguistic indeterminacy and so on The book focuses on problems of semantic analysis in law both in concrete cases that is particular cases before courts and at the theoretical level on methods of statutory interpretation It will be a valuable resource for academics and researchers working in the areas of Law and Language Legal Theory Legal Philosophy and Legal Linguistics

Cognitive Support for Learning Piet A. M. Kommers,2004 This book addresses the various aspects of computational support systems for learners nowadays It highlights in particular those learning aspects that rely heavily upon one s imagination of knowledge and new ideas The question is how learners may become more effective through the use of highly graphical computer systems that now conquer almost every desk As an extrapolation of the constructionistic paradigm learning is seen here as a process of conceptual design Witnessing the prudent introduction of CADD software Computer Aided Drafting and Design it is obvious that users are generally scrupulous to accept the computer in the ideational stages of design This book presents both existing conceptual techniques and those estimated to arrive in the few coming years

Current Trends in Knowledge Acquisition Bob Wielinga,1990 Knowledge acquisition has become a major area of artificial intelligence and cognitive science research The papers in this book show that the area of knowledge acquisition for knowledge based systems is still a diverse field in which a large number of research topics are being addressed However several main themes run through the papers First the issues of integrating knowledge from different sources and K A tools is a salient topic in many papers A second major topic in the papers is that of knowledge modelling Research in knowledge based systems emphasises the use of generic models of reasoning and its underlying knowledge An important trend in the area of knowledge modelling aims at the formalisation of knowledge models Where the field of knowledge acquisition was without tools and techniques years ago now there is a rapidly growing body of techniques and tools Apart from the integrated workbenches already mentioned above several papers in this book present new tools Although knowledge acquisition and machine learning have been considered as separate subfields of AI there is a tendency for the two fields to come together This publication combines machine learning techniques with more conventional knowledge elicitation techniques A framework is presented in which reasoning problem solving and learning together form a knowledge intensive system that can acquire knowledge from its own experience
