Memory Machines Belinda Barnet, 2013-07-15 This book explores the history of hypertext an influential concept that forms the underlying structure of the World Wide Web and innumerable software applications Barnet tells both the human and the technological story by weaving together contemporary literature and her exclusive interviews with those at the forefront of hypertext innovation tracing its evolutionary roots back to the analogue machine imagined by Vannevar Bush in 1945

The Computable City Michael Batty, 2024-03-26 How computers simulate cities and how they are also being embedded in cities changing our behavior and the way in which cities evolve At every stage in the history of computers and communications it is safe to say we have been unable to predict what happens next When computers first appeared nearly seventy five years ago primitive computer models were used to help understand and plan cities but as computers became faster smaller more powerful and ever more ubiquitous cities themselves began to embrace them As a result the smart city emerged In *The Computable City* Michael Batty investigates the circularity of this peculiar evolution how computers and communications changed the very nature of

our city models which in turn are used to simulate systems composed of those same computers Batty first charts the origins of computers and examines how our computational urban models have developed and how they have been enriched by computer graphics He then explores the sequence of digital revolutions and how they are converging focusing on continual changes in new technologies as well as the twenty first century surge in social media platform economies and the planning of the smart city He concludes by revisiting the digital transformation as it continues to confound us with the understanding that the city now a high frequency twenty four hour version of itself changes our understanding of what is possible

The Cultural Logic of Computation David Golumbia,2009-08-30 Advocates of computers make sweeping claims for their inherently transformative power new and different from previous technologies they are sure to resolve many of our existing social problems and perhaps even to cause a positive political revolution In *The Cultural Logic of Computation* David Golumbia who worked as a software designer for more than ten years confronts this orthodoxy arguing instead that computers are cultural all the way down that there is no part of the apparent technological transformation that is not shaped by historical and cultural processes or that escapes existing cultural politics From the perspective of transnational corporations and governments computers benefit existing power much more fully than they provide means to distribute or contest it Despite this our thinking about computers has developed into a nearly invisible ideology Golumbia dubs computationalism an ideology that informs our thinking not just about computers but about economic and social trends as sweeping as globalization Driven by a programmer s knowledge of computers as well as by a deep engagement with contemporary literary and cultural studies and poststructuralist theory *The Cultural Logic of Computation* provides a needed corrective to the uncritical enthusiasm for computers common today in many parts of our culture

New Media and the Nation in Malaysia Susan Leong,2013-10-08 In the four decades or so since its invention the internet has become pivotal to how many societies function influencing how individual citizens interact with and respond to their governments Within

Southeast Asia while most governments subscribe to the belief that new media technological advancement improves their nation's socio-economic conditions they also worry about its cultural and political effects This book examines how this set of dynamics operates through its study of new media in contemporary Malaysian society Using the social imaginary framework and adopting a socio-historical approach the book explains the varied understandings of new media as a continuing process wherein individuals and their societies operate in tandem to create negotiate and enact the meaning ascribed to concepts and ideas In doing so it also highlights the importance of non-users to national technological policies Through its examination of the ideation and development of Malaysia's Multimedia Super Corridor mega project to date and reference to the seminal socio-political events of 2007-2012 including the 2008 General Elections Bersih and Hindraf rallies this book provides a clear explanation for new media's prominence in the multi-ethnic and majority Islamic society of Malaysia today It is of interest to academics working in the field of Media and Internet Studies and Southeast Asian Politics **Alternative**

Historiographies of the Digital Humanities Dorothy Kim, Adeline Koh, 2021 *Alternative Historiographies of the Digital Humanities* examines the process of history in the narrative of the digital humanities and deconstructs its history as a straight line from the beginnings of humanities computing By discussing alternative histories of the digital humanities that address queer gaming feminist game studies praxis Cold War military industrial complex computation the creation of the environmental humanities monolingual discontent in DH the hidden history of DH in English studies radical media praxis cultural studies and DH indigenous futurities Pacific Rim post-colonial DH the issue of scale and DH the radical indigenous feminist histories of the digital database and the possibilities for an antifascist DH this collection hopes to re-set discussions of the DH straight white origin myths Thus this collection hopes to re-examine the silences in such a straight and white masculinist history and how power comes into play to shape this straight white DH narrative Page 4 of cover *50 Ways to Understand Communication* Arthur Asa Berger, 2006-02-16 Is consciousness like an iceberg Does advertising lead to the commodification of humans What is the hidden meaning of fairy tales In *50 Ways to Understand Communication* Arthur Asa Berger familiarizes readers with important concepts written by leading communication and cultural theorists such as Saussure Lévi-Strauss de Certeau Lasswell McLuhan Postman and many others Organized in fifty short segments this concise guide covers a wide range of important ideas from psychoanalysis and semiology to humor otherness and nonverbal communication Berger's clear explanations and examples surround this assortment of influential writing walking the uninitiated through these sometimes dense theoretical works His selections and commentary will challenge readers to reconsider the role of communication in our culture This engaging accessible book is essential for students of communication and anyone interested in how we communicate in a world of rapidly changing media *The Net Effect* Thomas Streeter, 2011 This book about America's romance with computer communication looks at the Internet not as a harbinger of the future or the next big thing but as an expression of the times Streeter demonstrates that our ideas about what connected

computers are for have been in constant flux since their invention In the 1950s they were imagined as the means for fighting nuclear wars in the 1960s as systems for bringing mathematical certainty to the messy complexity of social life in the 1970s as countercultural playgrounds in the 1980s as an icon for what's good about free markets in the 1990s as a new frontier to be conquered and by the late 1990s as the transcendence of markets in an anarchist open source utopia The Net Effect teases out how culture has influenced the construction of the internet and how the structure of the internet has played a role in cultures of social and political thought cover A Companion to Digital Literary Studies Ray Siemens, Susan Schreibman, 2013-03-20 This Companion offers an extensive examination of how new technologies are changing the nature of literary studies from scholarly editing and literary criticism to interactive fiction and immersive environments A complete overview exploring the application of computing in literary studies Includes the seminal writings from the field Focuses on methods and perspectives new genres formatting issues and best practices for digital preservation Explores the new genres of hypertext literature installations gaming and web blogs The Appendix serves as an annotated bibliography

Automate This Christopher Steiner, 2012-08-30 The rousing story of the last gasp of human agency and how today's best and brightest minds are endeavoring to put an end to it It used to be that to diagnose an illness interpret legal documents analyze foreign policy or write a newspaper article you needed a human being with specific skills and maybe an advanced degree or two These days high level tasks are increasingly being handled by algorithms that can do precise work not only with speed but also with nuance These bots started with human programming and logic but now their reach extends beyond what their creators ever expected In this fascinating frightening book Christopher Steiner tells the story of how algorithms took over and shows why the bot revolution is about to spill into every aspect of our lives often silently without our knowledge The May 2010 Flash Crash exposed Wall Street's reliance on trading bots to the tune of a 998 point market

drop and 1 trillion in vanished market value But that was just the beginning In Automate This we meet bots that are driving cars penning haiku and writing music mistaken for Bach s They listen in on our customer service calls and figure out what Iran would do in the event of a nuclear standoff There are algorithms that can pick out the most cohesive crew of astronauts for a space mission or identify the next Jeremy Lin Some can even ingest statistics from baseball games and spit out pitch perfect sports journalism indistinguishable from that produced by humans The interaction of man and machine can make our lives easier But what will the world look like when algorithms control our hospitals our roads our culture and our national security What happens to businesses when we automate judgment and eliminate human instinct And what role will be left for doctors lawyers writers truck drivers and many others Who knows maybe there s a bot learning to do your job this minute
