Fix Not Secure warnings in Google Chrome and other browsers for free

How many times have you heard about major companies being hacked and private data being accessed? It's scary isn't it? Everyone is becoming more aware of the need for increased security when online. We now live in an internet world where trust is everything. If you run a website then act now. Visitors to your site need to know they can trust you and your website. Visitors now know that they can easily check whether your site is secure by looking up at the address bar of their browser. If a web page is secure they will see the comforting padlock icon. Google Chrome used by around 60% of all surfers goes one step further and adds the word Secure just to reinforce the fact. Insecure pages don't have that padlock and Google Chrome may even state Not Secure. How would that kill the trust of your visitors? The industry standard for establishing a secure and encrypted link to a website is called SSL Secure Sockets Layer. This encryption ensures that all data moving between a web browser and a website server is private. You can tell if a website uses a secure connection because the URL begins with HTTPS. That S stands for secure so HTTPS is the secure version of HTTP. To create this type of security you need at least one certificate issued by a certificate authority and installed on your server. This used to cost a significant amount of money. However in this book I will show you how to get a free certificate and install it so that your site is secure. In the process you'll also add your site to Cloudflare, a content delivery network that speeds up and helps protect your website from hackers and spammers. In this book you will learn what SSL is and why it is important for a website to have that HTTPS prefix. That Google actually counts SSL on a site as a ranking factor. How HTTPS works and how to set it up on your website. That some web hosts may have already set up an HTTPS version of your site using something called AutoSSL. How to check if your site already has a secure version. Why sites can have both HTTP AND HTTPS versions and why this is a bad idea. What to look for in a web host to make the transition to HTTPS simple and pain free. What Cloudflare is and why you should be using it. How to setup a free account on Cloudflare and then add your site to Cloudflare. How to change the DNS at your registrar. About the various types of SSL offered by Cloudflare. About origin certificates. How to exclude your site from AutoSSL and stop your cPanel from auto generating certificates for you. You'll see an example of why this can be a good idea. How to create a free origin certificate at Cloudflare and how to install it on your server. How to secure your WordPress dashboard. How to get back into your dashboard if you accidentally get locked out in the process. How to set up redirects so that all of the old HTTP web pages automatically redirect to the secure HTTPS version. This type of redirect also alerts Google that the page has permanently moved to HTTPS. How to avoid a problem caused by a specific WordPress caching plugin and how to fix the problem if you still need to. How to check your SSL is working on all pages of your website. What mixed content is, how to find it and how to fix it. That there are other places you may need to update links including the robots.txt and hard coded links you may have inserted in the past.

How to update Google Analytics if you use it How to update things in Google Search Console Webmaster Tools if you use this service The book was created to be hands on so I show you every step of the process using one of my own sites as an example You can follow along as we go if you like By the end of this book you will be able to move your site over to HTTPS using free SSL certificates *WordPress Security* Jesse Friedman,2014 **Advance WP Mastery** Laura Maya,2021-07-10 Advance WordPress Mastery Transform Your WordPress Website into a Lean Mean Marketing Machine Do You Want To Take Your Website Business To The Next Level With WordPress WordPress has come a long way from being a basic blogging tool to a global platform endorsed by the biggest brands and the most popular celebrities Its features are particularly useful for small businesses as it allows them to put up attractive and high functioning websites without the need for a big budget or an expert developer And it works seamlessly for big websites as well WordPress is the best known and most widely used content management system CMS for creating websites As the Coronavirus circles the world it is impacting the WordPress industry overall The web development industry boomed as well as the eCommerce industry Businesses that stayed alive needed cheaper ways to communicate and turned to websites and many people who lost their jobs started their own companies Many of those people needed online stores providing a WordPress specialists have a unique opportunity to help these traditional brick and mortar businesses prepare themselves for the online world during this crisis Thanks to the platform s free and simple content management system it made it possible for anyone regardless of levels of technical knowledge to create impressive websites The power of WordPress is the flexibility it offers through third party plugins and themes to quickly get something online that can actually help an owner s bottom line right now And business owners are ready to pay for it Web developers are charging anywhere between 5 to 5K for a fully functional WordPress site that generates great results With all its themes plugins and add ons it can be a little bit overwhelming to understand how the platform works and how you can leverage its full potential to get optimum results Well we have put together all the resources you need to get started with WordPress quickly and easily Just grab our comprehensive step by step Advance WordPress Mastery eguide To put it further into perspective let s take a look at some stats 41% of the web is built on WordPress Looking at websites built with a CMS alone WordPress powers a whopping 64.1% Over 455 million websites use WordPress There are 24.8 million live WordPress sites 409 million people view 15.5 billion pages every month 41.7 million posts are published every month on WordPress This eguide will explain everything you need to know about WordPress and website creation From how to install WordPress customize site settings to post and page editors block WordPress editor and Gutenberg WordPress editor We have included every single thing Its features are particularly useful for small businesses as it allows them to put up attractive and high functioning websites without the need for a big budget or an expert developer And it works seamlessly for big websites as well [Wordpress & Elementor Mastery Book](#) Alfred Mark Ph D,2021-04-14 Do You want to build a responsive website and have heard about WordPress but don t know where to start Well look no further than the WordPress Here Is A Preview Of
