Topological Methods in Algebraic Geometry Friedrich Hirzebruch,1978 Topological Methods in Algebraic Geometry Friedrich Hirzebruch,1995-02-15 In recent years new topological methods especially the theory of sheaves founded by J LERAY have been applied successfully to algebraic geometry and to the theory of functions of several complex variables H CARTAN and J P SERRE have shown how fundamental theorems on holomorphically complete manifolds STEIN manifolds can be formulated in terms of sheaf theory These theorems imply many facts of function theory because the domains of holomorphy are holomorphically complete They can also be applied to algebraic geometry because the complement of a hyperplane section of an algebraic manifold is holomorphically complete J P SERRE has obtained important results on algebraic manifolds by these and other methods Recently many of his results have been proved for algebraic varieties defined over a field of arbitrary characteristic K KODAIRA and D C SPENCER have also applied sheaf theory to algebraic geometry with great success Their methods differ from those of SERRE in that they use techniques from differential geometry harmonic integrals etc but do not make any use of the theory of STEIN manifolds M F ATIYAH and W V D HODGE have dealt successfully with problems on integrals of the second kind on algebraic manifolds with the help of sheaf theory I was able to work together with K KODAIRA and D C SPENCER during a stay at the Institute for Advanced Study at Princeton from 1952 to 1954 Topological Methods in Algebraic Geometry Friedrich Hirzebruch,2013-11-11 **Topological Methods in**

Deshpande, 2009 *Topological Methods in Algebraic Transformation Groups* Kraft, 2012-12-06 In recent years there has been increasing interest and activity in the area of group actions on affine and projective algebraic varieties Techniques from various branches of mathematics have been important for this study especially those coming from the well developed theory of smooth compact transformation groups It was timely to have an interdisciplinary meeting on these topics We organized the conference Topological Methods in Algebraic Transformation Groups which was held at Rutgers University 4 8 April 1988 Our aim was to facilitate an exchange of ideas and techniques among mathematicians studying compact smooth transformation groups algebraic transformation groups and related issues in algebraic and analytic geometry The meeting was well attended and these Proceedings offer a larger audience the opportunity to benefit from the excellent survey and specialized talks presented The main topics concerned various aspects of group actions algebraic quotients homogeneous spaces and their compactifications The meeting was made possible by support from Rutgers University and the National Science Foundation We express our deep appreciation for this support We also thank Annette Neuen for her assistance with the technical preparation of these Proceedings *Geometric and Topological Methods for Quantum Field Theory* Sylvie Paycha, Bernardo Uribe, 2007 This volume based on lectures and short communications at a summer school in Villa de Leyva Colombia July 2005 offers an introduction to some recent developments in several active topics at the interface between geometry topology and quantum field theory It is aimed at graduate students in physics or mathematics who might want insight in the following topics covered in five survey lectures Anomalies and noncommutative geometry Deformation quantisation and Poisson algebras Topological quantum field theory and orbifolds These lectures are followed by nine articles on various topics at the borderline of mathematics and physics ranging from quasicrystals to invariant instantons through black holes and involving a number of mathematical tools borrowed from geometry algebra and analysis *Topological methods in algebraic geometry [Neue topologische Methodend in der algebraischen Geometrie, engl.] New appendix and transl. from the 2.
