Topology Control In Wireless Ad Hoc And Sensor Networks:

Topology Control in Wireless Ad Hoc and Sensor Networks Paolo Santi, 2005-08-05 Topology control is fundamental to solving scalability and capacity problems in large scale wireless ad hoc and sensor networks. Forthcoming wireless multi hop networks such as ad hoc and sensor networks will allow network nodes to control the communication topology by choosing their transmitting ranges. Briefly topology control TC is the art of coordinating nodes' decisions regarding their transmitting ranges to generate a network with the desired features. Building an optimized network topology helps surpass the prevalent scalability and capacity problems. Topology Control in Wireless Ad Hoc and Sensor Networks makes the case for topology control and provides an exhaustive coverage of TC techniques in wireless ad hoc and sensor networks considering both stationary networks to which most of the existing solutions are tailored and mobile networks. The author introduces a new taxonomy of topology control and gives a full explication of the applications and challenges of this important topic. Topology Control in Wireless Ad Hoc and Sensor Networks Defines topology control and explains its necessity considering both stationary and mobile networks. Describes the most representative TC protocols and their performance. Covers the critical transmitting range for stationary and mobile networks topology optimization problems such as energy efficiency and distributed topology control. Discusses implementation and open issues including realistic models and the effect of multi hop data traffic. Presents a case study on routing protocol design to demonstrate how TC can ease the design of cooperative routing protocols. This invaluable text will provide graduate students in Computer Science, Electrical and Computer Engineering, Applied Mathematics and Physics researchers in the field of ad hoc networking and professionals in wireless telecoms as well as networking system developers with a single reference resource on topology control.

Improved Robustness of Topology Control and Routing Algorithms for Ad-hoc Wireless Sensor Networks Kevin M. Lillis, 2008 *Ad Hoc and Sensor Wireless Networks: Architectures, Algorithms and Protocols* Hai Liu, Yiu-Wing Leung, Xiaowen Chu, 2009-01-15 This Ebook brings together the latest developments and studies of Mobile Ad Hoc Networks, MANETs and Wireless Sensor Networks (WSNs) which should provide a seedbed for new breakthroughs. It focuses on the most representative topics in MANETs and WSNs. **Topology Control in Wireless Sensor Networks** Miguel A. Labrador, Pedro M. Wightman, 2009-02-27 The field of wireless sensor networks continues to evolve and grow in both practical and research domains. More and more wireless sensor networks are being used to gather information in real life applications. It is common to see how this technology is being applied in irrigation systems, intelligent buildings, bridges, security mechanisms, military operations, transportation related applications etc. At the same time, new developments in hardware, software and communication technologies are panding these possibilities. As in any other technology, research brings new developments and refinements and continuous improvements of current approaches that push the technology even further. Looking toward the future, the technology seems even more promising in two directions. First, a few years from now, more powerful wireless

sensor devices will be available and wireless sensor networks will have applicability in an endless number of scenarios as they will be able to handle traffic loads not possible today make more computations store more data and live longer because of better energy sources Second a few years from now the opposite scenario might also be possible The availability of very constrained nanotechnology made wireless sensor devices will bring a whole new world of applications as they will be able to operate in environments and places unimaginable today These two scenarios at the same time will both bring new research challenges that are always welcome to researchers
