Would Trotsky Wear A Bluetooth Technological Utopianism Under Socialism 1917 1989:

Would Trotsky Wear a Bluetooth? Paul R. Josephson, 2010 After visiting Russia in 1921 the journalist Lincoln Steffens famously declared I have seen the future and it works Steffens referred to the social experiment of technological utopianism he found in the Soviet Union where subway cars and farm tractors would carry the worker and peasant figuratively and literally into the twentieth century Believing that socialism and technology together created a brave new world Boleslaw Bierut of Poland and Kim Il Sung of North Korea and other leaders joined Russia's Vladimir Lenin and Leon Trotsky in embracing big technology with a verve and conviction that rivaled the western world's Paul R Josephson here explores these utopian visions of technology and their unanticipated human and environmental costs He examines the role of technology in communist plans and policies and the interplay between ideology and technological development He shows that while technology was a symbol of regime legitimacy and an engine of progress the changes it spurred were not unequivocally positive Instead of achieving a worker's paradise socialist technologies exposed the proletariat to dangerous machinery and deadly pollution rather than freeing women from exploitation in family and labor they paradoxically created for them the dual and exhausting burdens of mother and worker The future did not work The fall of the Soviet Union in 1991 marked the end of communism's self proclaimed glorious quest to reach and surpass the West Josephson's intriguing study of how technology both helped and hindered this effort asks new and important questions about the crucial issues inextricably linked with the development and diffusion of technology in any sociopolitical system

of overfishing sees the future of fisheries hinging on holistic approaches involving fish fisher and environment Nature Most
current fishing practices are neither economically nor biologically sustainable Every year the world spends 80 billion buying
fish that cost 105 billion to catch even as heavy fishing places growing pressure on stocks that are already struggling with
warmer more acidic oceans How have we developed an industry that is so wasteful Carmel Finley explores how government
subsidies propelled the expansion of fishing from a coastal in shore activity into a global industry Looking across politics
economics and biology *All the Boats on the Ocean* casts a wide net to reveal how the subsidy driven expansion of fisheries in
the Pacific during the Cold War led to the growth of fisheries science and the creation of international fisheries management
In a world where this technologically advanced industry has enabled nations to colonize the oceans fish literally have no

place left to hide and the future of the seas and their fish stocks is uncertain Finley is an engaging writer weaving together historical economic and societal threads in a narrative that anchors global developments in the accounts of local actors Science The most comprehensive and empirically grounded account yet of how the modern transnational fishery regime emerged Oregon Historical Quarterly Finley links the fisheries story to the great transformation of global ecology in the postwar period by way of the technology policy and politics of food production a significant original book Arthur McEvoy Southwestern Law School author of *The Fisherman's Problem Ecology and Law in the California Fisheries 1850-1980* The Routledge Handbook of the Cold War Artemy M.
