Julia Schneider

Toronto Transformations In A City And Its Region Metropolitan Portraits:

Toronto E. C. Relph, 2014 *Toronto* Edward Relph, 2013-08-22 Extending a hundred miles across south central Ontario Toronto is the fifth largest metropolitan area in North America with the highest population density and the busiest expressway At its core old Toronto consists of walkable neighborhoods and a financial district deeply connected to the global economy Newer parts of the region have downtown centers linked by networks of arterial roads and expressways employment districts with most of the region's jobs and ethnically diverse suburbs where English is a minority language About half the population is foreign born the highest proportion in the developed world Population growth because of immigration almost three million in thirty years shows few signs of abating but recently implemented regional strategies aim to contain future urban expansion within a greenbelt and to accommodate growth by increasing densities in designated urban centers served by public transit Toronto Transformations in a City and Its Region traces the city's development from a British colonial outpost established in 1793 to the multicultural polycentric metropolitan region of today Though the original grid survey and much of the streetcar city created a century ago have endured they have been supplemented by remarkable changes over the past fifty years in the context of economic and social globalization Geographer Edward Relph's broad stroke portrait of the urban region draws on the ideas of two renowned Torontonians Jane Jacobs and Marshall McLuhan to provide an interpretation of how its current forms and landscapes came to be as they are the values they embody and how they may change once again

Beyond Rust Allen Dieterich-Ward, 2016 Beyond Rust chronicles the rise fall and rebirth of metropolitan Pittsburgh an industrial region that once formed the heart of the world's steel production and is now touted as a model for reviving other hard hit cities of the Rust Belt Writing in clear and engaging prose historian and area native Allen Dieterich Ward provides a new model for a truly metropolitan history that integrates the urban core with its regional hinterland of satellite cities white collar suburbs mill towns and rural mining areas Pittsburgh reached its industrial heyday between 1880 and 1920 as vertically integrated industrial corporations forged a regional community in the mountainous Upper Ohio River Valley Over subsequent decades metropolitan population growth slowed as mining and manufacturing employment declined Faced with economic and environmental disaster in the 1930s Pittsburgh's business elite and political leaders developed an ambitious program of pollution control and infrastructure development The public private partnership behind the Pittsburgh Renaissance as advocates called it pursued nothing less than the selective erasure of the existing social and physical environment in favor of a modernist functionally divided landscape a goal that was widely copied by other aging cities and one that has important ramifications for the broader national story Ultimately the Renaissance vision of downtown skyscrapers sleek suburban research campuses and bucolic regional parks resulted in an uneven transformation that tore the urban fabric while leaving deindustrializing river valleys and impoverished coal towns isolated from areas of postwar growth Beyond Rust is among the first books of its kind to continue past the collapse of American manufacturing in

the 1980s by exploring the diverse ways residents of an iconic industrial region sought places for themselves within a new economic order

Streetcars and the Shifting Geographies of Toronto Brian Doucet, Michael Doucet, 2022-03-01 When looking at old pictures of Toronto it is clear that the city's urban economic and social geography has changed dramatically over the generations. Historic photos of Toronto's streetcar network offer a unique opportunity to examine how the city has been transformed from a provincial industrial city into one of North America's largest and most diverse regions. Streetcars and the Shifting Geographies of Toronto studies the city's urban transformations through an analysis of photographs taken by streetcar enthusiasts beginning in the 1960s. These photographers did not intend to record the urban form, function, or social geographies of Toronto; they were accidental archivists whose main goal was to photograph the streetcars themselves. But today their images render visible the ordinary day-to-day life in the city in a way that no others did. These historic photographs show a Toronto before gentrification, globalization, and deindustrialization. Each image has been rephotographed to provide fresh insights into a city that is in a constant state of flux. With gorgeous illustrations, this unique book offers an understanding of how Toronto has changed and the reasons behind these urban shifts. The visual exploration of historic and contemporary images from different parts of the city helps to explain how the major forces shaping the city affect its form, functions, neighbourhoods, and public spaces.

Transforming Distressed Global Communities Fritz Wagner, Riad Mahayni, Andreas Piller, 2016-03-09 Many of our global cities are distressed and facing a host of issues: economic collapse in the face of rising expectations, social disintegration, and civil unrest, and ecological degradation and the threats associated with climate change, including more frequent and more severe natural disasters. Our long-held assumptions about man and nature and how they interact are defunct. We realize now that we can no longer continue to build without addressing the long-term impacts of our actions and their spillovers. Energy and natural resources are finite. The way we configure economies has come into question. In the developed world, especially in the United States, infrastructure and the notions that underpin it are outdated. Meanwhile, the developing world is experiencing major rapid transformations in lifestyles and economies that are affecting billions of people and requiring a whole new way of planning human settlements. Cities are the key to our future; they represent the most effective vehicle for positive advancements in the human condition and environmental change. This volume argues for the need to redesign and re-plan our cities in holistic ways that reflect our new understanding and relate to their diversity and multi-dimensionality. Presenting a range of case studies from around the world, this volume examines how these distressed cities are dealing with these issues in planning for their future. Alongside these empirical chapters are philosophical essays that consider the future of distressed cities. Bringing together a team of leading scholars, United Nations agencies, non-governmental organizations, private consulting firms, international organizations, and foundations, and policy officials, this volume provides a unique and comprehensive overview on how to transform distressed communities into more livable places.

Pictures of a Gone City Richard A. Walker, 2018-06-01 The

San Francisco Bay Area is currently the jewel in the crown of capitalism the tech capital of the world and a gusher of wealth from the Silicon Gold Rush It has been generating jobs spawning new innovation and spreading ideas that are changing lives everywhere It boasts of being the Left Coast the Greenest City and the best place for workers in the USA So what could be wrong It may seem that the Bay Area has the best of it in Trump s America but there is a dark side of success overheated bubbles and spectacular crashes exploding inequality and millions of underpaid workers a boiling housing crisis mass displacement and severe environmental damage a delusional tech elite and complicity with the worst in American politics This sweeping account of the Bay Area in the age of the tech boom covers many bases It begins with the phenomenal concentration of IT in Greater Silicon Valley the fabulous economic growth of the bay region and the unbelievable wealth piling up for the 1% and high incomes of Upper Classes in contrast to the fate of the working class and people of color earning poverty wages and struggling to keep their heads above water The middle chapters survey the urban scene including the greatest housing bubble in the United States a metropolis exploding in every direction and a geography turned inside out Lastly it hits the environmental impact of the boom the fantastical ideology of TechWorld and the political implications of the tech led transformation of the bay region

Avery Index to Architectural Periodicals. 2d Ed., Rev. and Enl Avery Library, 1997

Toronto Jennifer McMorran, Alain Rondeau, 1999 The collection of articles in this book offers a penetrating shaft into the still burgeoning subject of light propagation and localization in photonic crystals and disordered media While the subject has its origins in physics it has broad significance and applicability in disciplines such as engineering chemistry mathematics and medicine Unlike other branches of physics where the phenomena under consideration require extreme conditions of temperature pressure energy or isolation from competing effects the phenomena related to light localization survive under the most ordinary of conditions This provides the science described in this book with broad applicability and vitality However the greatest challenge to the further development of this field is in the reliable and inexpensive synthesis of materials of the required composition architecture and length scale where the proper balance between order and disorder is realized Similar challenges have been faced and overcome in fields such as semiconductor science and technology The challenge of photonic crystal synthesis has inspired a variety of novel fabrication protocols such as self assembly and optical interference lithography that offer much less expensive approaches than conventional semiconductor microlithography Once these challenges are fully met it is likely that light propagation and localization in photonic microstructures will be at the heart of a 21st century revolution in science and technology

From the Introduction Sajeew John University of Toronto Ontario Canada One of the first books specifically focused on disorder in photonic structures Optical Properties of Photonic Structures Interplay of Order and Disorder explores how both order and disorder provide the key to the different regimes of light transport and to the systematic localization and trapping of light Collecting contributions from leaders of research activity in the field the book covers many important directions methods and approaches It describes various one two and

three dimensional structures including opals aperiodic Fibonacci type photonic structures photonic amorphous structures photonic glasses Levy glasses and hypersonic magnetophotonic and plasmonic photonic crystals with nanocavities quantum dots and lasing action The book also addresses practical applications in areas such as optical communications optical computing laser surgery and energy

Reinventing a Small, Worldly City Ana Gonçalves,2016-11-10 Focusing on Cardiff the capital city of Wales in the UK this book reflects on a contemporary small European city its development characteristics and present struggles Following a century in which it was dubbed the world's coaltropolis the decline in demand for coal meant that Cardiff endured an acute process of de industrialisation In seeking to address this and the related high levels of unemployment it has experienced a process of cultural and social reinvention since the 1980s and more significantly after Wales turned into a devolved nation in the late 1990s Cardiff's development from a small port into a capital city is examined and special attention is paid to the city's cultural and social transformation in recent decades that has relied on the expansion of specific cultural clusters and tourism which have been decisive for the transformation of its cultural identity and in shaping the city's individual and collective memories and identities Cardiff epitomises a quintessential case of urban reinvention cultural regeneration and social transformation lying between two apparently contradictory paradigms the need to respond to global demands and the effort to maintain its cultural distinctiveness and Welsh roots Therefore it sets the scene for a wider reflection on small cities especially in the European setting and what generally characterises these cities their liveability cultural creativity and community empowerment as well as the fact that they facilitate mobility and social interaction These worldly cities the book contends present interesting opportunities and challenges at the urban economic social and cultural levels that rely on more human scale people based approaches to cities thus defying existing urban hierarchies and categorisations
