Apffel-Marglin, David Shearer, 2017-07-18 A fascinating description of how utilizing the biochar embedded in terra preta the recently rediscovered sacred soil of the pre Columbian peoples of the Amazon rainforest can cut our dependency on petrochemicals restore the health of our soils remove carbon from our overheating atmosphere and restore the planet to pre industrial levels of atmospheric carbon by 2050 The authors show that the rediscovery of terra preta is an opportunity to move beyond the West's tradition of plunder and genocide of the native civilizations of the Americas by offering an invitation to embrace the deeper mystery of the indigenous methods of inquiry and to participate in an animate cosmos that gave rise to such a powerful soil technology Sacred Soil in recognizing the need for biocultural regeneration takes a multi disciplinary approach to the phenomenon of biochar soils utilizing mythopoeic historical anthropological and scientific perspectives to embrace the deep past the vexed present and the prospectus for our future Coming at this crucial juncture in human history the potential resting in biochar is also an open doorway into the indigenous ways of knowing that enabled the pre Columbian Amazonian high civilizations to support a population of millions while leaving their lands more fertile than when they arose
