

## CAUTION

Reflex Sight windage and elevation adjusters have stops at the extremes of adjustment. If adjustment screws become difficult to turn their limits are being approached. Do not continue to adjust or damage may result. Adjustments beyond the center of the range should not be necessary if properly installed on a serviceable weapon.

## Operation - Normal Conditions

The Reflex Sight dot is illuminated by fluorescent fiber optics which do not require battery power. There is no **ON** or **OFF** switch. Ambient light energizes the fluorescent fiber optic coil at the front of the Reflex Sight. The fiber optic coil is located behind a polycarbonate collector lens. See Figure 9.

FIGURE 9 - COLLECTOR LENS

2. The fluorescent fiber will instantly respond to changes in light in the target area and change the dot brightness to maintain good aiming contrast. The fluorescent fiber responds to low light at dawn and dusk. It also brightens the night dot, along with Tritium, under full moon conditions. With no visible light source, the dot is still visible due to Tritium illumination. The result is a well-defined, hard edged, and clearly visible aiming point in day, night, and artificial light conditions.
