The Closed World Paul N. Edwards, 1996 The Closed World offers a radically new alternative to the canonical histories of computers and cognitive science Arguing that we can make sense of computers as tools only when we simultaneously grasp their roles as metaphors and political icons Paul Edwards shows how Cold War social and cultural contexts shaped emerging computer technology and were transformed in turn by information machines The Closed World explores three apparently disparate histories the history of American global power the history of computing machines and the history of subjectivity in science and culture through the lens of the American political imagination In the process it reveals intimate links between the military projects of the Cold War the evolution of digital computers and the origins of cybernetics cognitive psychology and artificial intelligence Edwards begins by describing the emergence of a closed world discourse of global surveillance and control through high technology military power The Cold War political goal of containment led to the SAGE continental air defense system Rand Corporation studies of nuclear strategy and the advanced technologies of the Vietnam War These and other centralized computerized military command and control projects for containing world scale conflicts helped closed world discourse dominate Cold War political decisions Their apotheosis was the Reagan era plan for a Star Wars space based ballistic missile defense Edwards then shows how these military projects helped computers become axial metaphors in psychological theory Analyzing the Macy Conferences on cybernetics the Harvard Psycho Acoustic Laboratory and the early history of artificial intelligence he describes the formation of a cyborg discourse By constructing both human minds and artificial intelligences as information machines cyborg discourse assisted in integrating people into the hyper complex technological systems of the closed world Finally Edwards explores the cyborg as political identity in science fiction from the disembodied panoptic AI of 2001 A Space Odyssey to the mechanical robots of Star Wars and the engineered biological androids of Blade Runner where Information Age culture and subjectivity were both reflected and constructed

Inside Technology series No Use Thomas M. Nichols, 2014 For more than forty years the United States has maintained a public commitment to nuclear disarmament and every president from Ronald Reagan to Barack Obama has gradually reduced the size of America's nuclear forces Yet even now over two decades after the end of the Cold War the United States maintains a huge nuclear arsenal on high alert and ready for war The Americans like the Russians the Chinese and other major nuclear powers continue to retain a deep faith in the political and military value of nuclear force and this belief remains enshrined at the center of U S defense policy regardless of the radical changes that have taken place in international politics In *No Use* national security scholar Thomas

M Nichols offers a lucid accessible reexamination of the role of nuclear weapons and their prominence in U S security strategy Nichols explains why strategies built for the Cold War have survived into the twenty first century and he illustrates how America s nearly unshakable belief in the utility of nuclear arms has hindered U S and international attempts to slow the nuclear programs of volatile regimes in North Korea and Iran From a solid historical foundation Nichols makes the compelling argument that to end the danger of worldwide nuclear holocaust the United States must take the lead in abandoning unrealistic threats of nuclear force and then create a new and more stable approach to deterrence for the twenty first century

The Missile Next Door Gretchen Heefner, 2012-09-10 In the 1960s the Air Force buried 1 000 ICBMs in pastures across the Great Plains to keep U S nuclear strategy out of view As rural civilians of all political stripes found themselves living in the Soviet crosshairs a proud Plains individualism gave way to an economic dependence on the military industrial complex that still persists today

Engaging the Enemy Kimberly Marten Zisk, 1993-05-17 Did a doctrine race exist alongside the much publicized arms competition between East and West Using recent insights from organization theory Kimberly Marten Zisk answers this question in the affirmative Zisk challenges the standard portrayal of Soviet military officers as bureaucratic actors wedded to the status quo she maintains that when they were confronted by a changing external security environment they reacted by producing innovative doctrine The author s extensive evidence is drawn from newly declassified Soviet military journals and from her interviews with retired high ranking Soviet General Staff officers and highly placed Soviet Russian civilian defense experts According to Zisk the Cold War in Europe was powerfully influenced by

the reactions of Soviet military officers and civilian defense experts to modifications in U S and NATO military doctrine Zisk also asserts that contrary to the expectations of many analysts civilian intervention in military policy making need not provoke pitched civil military conflict Under Gorbachev s leadership for instance great efforts were made to ensure that defensive defense policies reflected military officers input and expertise Engaging the Enemy makes an important contribution not only to the theory of military organizations and the history of Soviet military policy but also to current policy debates on East West security issues Kimberly Marten Zisk is Assistant Professor of Political Science and Faculty Associate of the Mershon Center at the Ohio State University The Cold World They Made Ron Robin,2016-09-19 Ron Robin looks at the original power couple of strategic studies who during the most dangerous military standoff in history gained access to the deepest corridors of power The Wohlstetters legacy was kept alive by disciples in George W Bush s administration and their signature brilliance and hubris continue to shape U S policy today *Desiring the Bomb* Calum Lister Matheson,2018-11-13 A timely interdisciplinary study that applies psychoanalysis and the rhetorical tradition of the sublime to examine the cultural aftermath of the Atomic Age Every culture throughout history has obsessed over various end of the world scenarios The dawn of the Atomic Age marked a new twist in this tale For the first time our species became aware of its capacity to deliberately destroy itself Since that time the Bomb has served as an organizing metaphor a symbol of human annihilation a stand in for the unspeakable void of extinction and a discursive construct that challenges the limits of communication itself The parallel fascination with and abhorrence of nuclear weapons has metastasized into a host of other end of the world scenarios from global pandemics and climate change to zombie uprisings and asteroid collisions *Desiring the Bomb* Communication Psychoanalysis and the Atomic Age explores these world ending fantasies through the lens of psychoanalysis to reveal their implications for both contemporary apocalyptic culture and the operations of language itself What accounts for the enduring power of the Bomb as a symbol What does the prospect of annihilation suggest about language and its limits Thoroughly researched and accessibly written this study expands on the theories of Kenneth Burke Jacques Lacan Sigmund Freud and many others from a variety of disciplines to arrive at some answers to these questions Calum L Matheson undertakes a series of case studies including the Trinity test site nuclear war games urban shelter schemes and contemporary survivalism and argues that contending with the anxieties individual social cultural and political born of the Atomic Age depends on rhetorical conceptions of the real an order of experience that cannot be easily negotiated in language Using aspects of media studies rhetorical theory and psychoanalysis the author deftly engages the topics of Atomic Age survival extinction religion and fantasy along with their enduring cultural legacies to develop an account of the Bomb as a signifier and to explore why some Americans have become fascinated with fantasies of nuclear warfare and narratives of postapocalyptic rebirth Cult of the Irrelevant Michael C. Desch,2021-09-28 How professionalization and scholarly rigor made social scientists increasingly irrelevant to US national security policy To mobilize America s intellectual resources to meet the security challenges of the

post 9 11 world US Secretary of Defense Robert M Gates observed that we must again embrace eggheads and ideas But the gap between national security policymakers and international relations scholars has become a chasm In *Cult of the Irrelevant* Michael Desch traces the history of the relationship between the Beltway and the Ivory Tower from World War I to the present day Recounting key Golden Age academic strategists such as Thomas Schelling and Walt Rostow Desch s narrative shows that social science research became most oriented toward practical problem solving during times of war and that scholars returned to less relevant work during peacetime Social science disciplines like political science rewarded work that was methodologically sophisticated over scholarship that engaged with the messy realities of national security policy and academic culture increasingly turned away from the job of solving real world problems In the name of scientific objectivity academics today frequently engage only in basic research that they hope will somehow trickle down to policymakers Drawing on the lessons of this history as well as a unique survey of current and former national security policymakers Desch offers concrete recommendations for scholars who want to shape government work The result is a rich intellectual history and an essential wake up call to a field that has lost its way

Countdown Sarah Scoles,2024-02-06 For fans of *Oppenheimer* a riveting investigation into the modern nuclear weapons landscape Nuclear weapons are today as important as they were during the Cold War and some experts say we could be as close to a nuclear catastrophe now as we were at the height of that conflict Despite that conversations about these bombs generally often happen in past tense In *Countdown* science journalist Sarah Scoles uncovers a different atomic reality the nuclear age s present Drawing from years of on the ground reporting at the nation s nuclear weapons labs Scoles interrogates the idea that having nuclear weapons keeps us safe deterring attacks and preventing radioactive warfare She deftly assesses the existing nuclear apparatus in the United States taking readers beyond the news headlines and policy speak to reveal the state of nuclear weapons technology as well as how people currently working within the U S nuclear weapons complex have come to think about these bombs and the idea that someone someday might use them Through a sharp surprising and undoubtedly urgent narrative Scoles brings us out of the Cold War and into the twenty first century opening readers eyes to the true nature of nuclear weapons and their caretakers while also giving us the context necessary to understand the consequences of their existence for worse and for better for now and for the future
