Wheat Similarity Tricum Aestivum And Triticum Durum:

Variability Correlation and Path Analysis in Triticum Aestivum and Triticum Durum Wheat S R. Dhonde, R V (Gd) Thete, 1992 *Classification of Soft Durum Wheat (Triticum Turgidum Subsp. Durum) and Genetic Analysis of End-Use Quality Traits in Hard Red Spring Wheat (Triticum Aestivum L.) Using a GBS Approach* Jeffrey David Boehm (Jr.), 2017 Wheat Triticum aestivum L is a worldwide staple crop with distinct market classes and culinary end uses that are in part determined by its kernel texture characteristics Soft Svevo a new durum cultivar Triticum turgidum subsp durum featuring soft kernel texture was developed by the Ph1b mediated homoeologous transfer of the Puroindoline genes at the Hardness Ha locus from the D genome of Triticum aestivum Our first objective was to classify the size of the 5DS 5BS Chinese Spring translocation present in Soft Svevo Genotyping of near isogenic pairs of hard and soft durum wheats and subsequent BLASTn results for tagged markers indicate the 5DS 5BS translocation was nearly reciprocal as a 24 36 Mbp terminal distal segment of chromosome 5DS was gained whereas a 20 01 Mbp terminal distal segment of chromosome 5BS was lost Our second and third objectives were to classify the end use quality of 46 new soft durum wheat lines relative to soft and hard wheat end use quality traits Results revealed that the soft durum lines had high break and total flour yield low starch damage and cookie measurements similar to that of soft wheat checks but that the gluten strength gluten quality and pup loaf volume did not compare favorably to hard wheat checks Our fourth objective was to identify new QTLs for 16 end use quality traits in a set of 132 hard red spring wheat RILs segregating for Puroindoline alleles at the Ha locus and high and low molecular weight glutenin alleles at the Glu A1 Glu B1 Glu A3 Glu B3 and Glu D3 loci Multiple QTL mapping performed in rQTL identified 29 major QTLs explaining greater than 15% of the phenotypic variance each with 10 of those being reported for the first time The classification and development of new soft durum germplasm will serve to broaden durum wheat s end use functionality and help in determining a market fit for new commercial applications Moreover the discovery of the major end use quality QTLs being reported herein will improve forward genetics breeding strategies via the implementation of GBS markers for the selection of favorable end use quality alleles in newly developed hard red spring wheat cultivars Classification of Triticum Species and of Wheat Varieties Grown in the United States Leland Wilson Briggie, Louis Powers Reitz, 1963 **Durum Wheat Breeding** Conxita Royo, Natale Di Fonzo, 2005-11-07 Is your knowledge about this important grain crop up to date This comprehensive two volume resource reviews the latest advances in scientific and technical knowledge for durum wheat breeding With a scope of coverage that includes genetics and molecular biology plant and crop physiology and breeding strategies and methodology Dur *Durum Wheat (Triticum Durum Desf.)* International Organization for Standardization, 1994 Bread-making quality of wheat Bob Belderok, J. Mesdag, Dingena A. Donner, 2000-09-30 Wheat is the world s most important agricultural commodity In Europe where wheat is the main staple bread wheat Triticum aestivum covers the majority of land on which wheat is cropped Wheat breeders and technologists have contributed greatly to the

continued success of bread wheat and its products The bread making quality of a wheat variety can be described in relation to the processing its kernels must undergo to make a good bread Bread wheat kernels must be suitable for proper milling into a flour that can produce a dough capable of becoming fine bread The type of bread varies depending on local bread making practices Part I of this book contains a study of the anatomy and chemical composition of wheat kernels and of the fundamental difference between soft and hard kernelled varieties It relates these characteristics to the processes of milling dough making and manufacturing of bread and to biscuit and pasta making The genetic basis for these characteristics is illustrated and assay methods for characterizing wheat varieties ranging from Saunders chewing test to the most recent developments in glutenin and gliadin research are evaluated Part II briefly describes country by country how bread making quality has been integrated into wheat breeding programmes throughout Europe and how breeders have attempted to resolve the conflict between yield and quality It describes how quality wheats travelled around the world from their endogenic source in Eastern Europe to North America and back again to Europe This explains how specific genetic material can appear in the pedigrees of varieties grown in a wide range of agro ecological zones In addition to giving an interesting historical survey the book points the way forward for breeders efforts in the future Bread Making Quality updates and interprets knowledge in a way that makes it particularly accessible for food technologists breeders students and teachers

Combining Ability in Durum Wheat, Triticum Durum Desf Jimmy Newton Widner,1968 **Molecular and Physiological Characterisation of Alternative Dwarfing Genes Rht12 and Rht13 in Bread Wheat (Triticum Aestivum) and Rht18 in Durum Wheat (T. Turgidum Spp. Durum)** Leah Maree Maddocks,2008 **Impact of the D Genome and Quantitative Trait Loci on Quantitative Traits in a Spring Bread Wheat by Spring Durum Wheat Cross** Jay Robert Kalous,2014 Desirable agronomic traits are similar for common hexaploid 6X bread wheat Triticum aestivum 2n 6x 42 genome AABBDD and tetraploid 4X durum wheat T turgidum durum 2n 4x 28 genome AABB However bread and durum wheat are genetically isolated from each other due to an unequal number of genomes that cause sterility when crossed Previous work allowed identification of a 6X and 4X parent that when crossed resulted in a large number of recombinant progeny at both ploidy levels In this study interspecific recombinant inbred line populations at both 4X and 6X ploidy with 88 and 117 individuals respectively were developed from a cross between Choteau spring wheat 6X and Mountrail durum wheat 4X Lines within each population contained a mixture of alleles from each parent for loci in the A and B genomes The presence of the D genome in the 6X population resulted in increased yield tiller number and seed size The D genome also resulted in a decrease in stem solidness lower test weight and fewer seed per spike Similar results were found with a second RIL population containing 152 lines from 18 additional 6X by 4X crosses Several additional QTL for agronomic and quality traits were identified in both the 4X and 6X populations Positive durum alleles increasing kernel weight in hexaploids on chromosomes 3B and 7A may be useful for introgression by bread wheat breeders Science and Practice in
