Becoming the Supervisor Hugh R. Alley, 2020-05-07 Becoming a Supervisor tells the story of Trevor who works as one of the production team in a small company that makes toy boats He is thrust into the role of supervisor unexpectedly when his general manager reacts to his constant suggestions of how things could be better When the GM becomes ill Trevor struggles to take up the slack for several months until a new GM arrives The core of the book follows Trevor s growth under the coaching of Julie his new GM As Trevor deals with one challenge after another Julie guides him on a journey to learn the core skills needed by all front line leaders The reader takes away four key ideas 1 Front line leadership skills are not too complicated to learn 2 These skills are something that they can develop in themselves regardless of what their organization does 3 Tools and skills are there to help solve real business problems implementing the tools is not a strategy 4 In your role as supervisor directing or responsible for others you have to look after the mission of the company AND look after your people doing only one is not an option Essentially this book is intended to give hope to a new supervisor or team lead They will finish the book knowing that the skills they need can be learned and aren t that difficult to acquire It is designed to introduce the central skills that any supervisor has to be able to master at least with a basic working competency instructing leading and making improvements in their own area It introduces some of the more widely used tools that a new supervisor may need More importantly it ties these tools and skills to solving particular problems Readers will understand that the tools are not important for their own sake but only to the extent that the tools serve the larger objective of the organization This book is designed to give the reader an entertaining and hopeful story about the very difficult transition from worker to supervisor from being one of the crew to directing the crew It is an emotionally tough transition and the idea that someone could see a model of how it can work out will be helpful to folks new in a leadership role Finally the book provides a reference to other sources of information that will let the reader extend their learning about each of the tools or skills

How the Brain Processes Multimodal Technical Instructions Dirk Remley, 2016-12-05 While Aristotle acknowledges the connection between rhetoric biology and cognitive abilities scholarship continues to struggle to integrate the fields of rhetoric and neurobiology Drawing on recent work in neuro-rhetoric this book offers a model that integrates multimodal rhetorical theory and multisensory neural processing theory pertaining to cognition and learning Using existing theories from multimodal rhetoric and specific findings from neurobiological studies the author develops a model that integrates concepts from both fields bridging if not uniting them He also discusses possible applications of the new model with specific case studies related to training and instruction These applications include various media used in instructional and training contexts such as print slide shows videos simulations and hands on training The book thus introduces concepts of cognitive neuroscience to multimodal rhetorical theory and facilitates theorization combining multimodal rhetoric and multisensory cognition and serves as a vehicle by which readers can better understand the links between multimodal rhetoric and cognitive neuroscience associated with technical communication Integrating case studies from industry and practice the text makes explicit connections between academic scholarship and workplace preparation It also describes how interdisciplinary research can contribute to pharmaceutical research as well as the development of productive instructional materials Rhetoric is affected by how the brain of any member of a given audience can process information This book can promote further research qualitative and quantitative to develop a better understanding of the relationship between multimodal messages and how the brain processes such information
