Mathematics and Statistics for Science James Sneyd, Rachel M. Fewster, Duncan McGillivray, 2022-06-27 Mathematics and statistics are the bedrock of modern science No matter which branch of science you plan to work in you simply cannot avoid quantitative approaches And while you won't always need to know a great deal of theory you will need to know how to apply mathematical and statistical methods in realistic scenarios That is precisely what this book teaches It covers the mathematical and statistical topics that are ubiquitous in early undergraduate courses but does so in a way that is directly linked to science Beginning with the use of units and functions this book covers key topics such as complex numbers vectors and matrices differentiation both single and multivariable integration elementary differential equations probability random variables inference and linear regression Each topic is illustrated with widely used scientific equations such as the ideal gas law or the Nernst equation and real scientific data often taken directly from recent scientific papers The emphasis throughout is on practical solutions including the use of computational tools such as Wolfram Alpha or R not theoretical development There is a large number of exercises divided into mathematical drills and scientific applications and full solutions to all the exercises are available to instructors Mathematics and Statistics for Science covers the core methods in mathematics and statistics necessary for a university degree in science highlighting practical solutions and scientific applications Its pragmatic approach is ideal for students who need to apply mathematics and statistics in a real scientific setting whether in the physical sciences life sciences or medicine

Mathematical Geosciences Joseph L. Awange, Béla Paláncz, Robert H. Lewis, Lajos Völgyesi, 2023-04-07 This second edition of *Mathematical Geosciences* book adds five new topics Solution equations with uncertainty which proposes two novel methods for solving nonlinear geodetic equations as stochastic variables when the parameters of these equations have uncertainty characterized by probability distribution The first method an algebraic technique partly employs symbolic computations and is applicable to polynomial systems having different uncertainty distributions of the parameters The second method a numerical technique uses stochastic differential equation in its form Nature Inspired Global Optimization where Meta heuristic algorithms are based on natural phenomenon such as Particle Swarm Optimization This approach simulates e.g. schools of fish or flocks of birds and is extended through discussion of geodetic applications Black Hole Algorithm which is based on the black hole phenomena is added and a new variant of the algorithm code is introduced and illustrated based on examples The application of the Gröbner Basis to integer programming based on numeric symbolic computation is introduced and illustrated by solving some standard problems An extension of the applications of integer programming solving phase ambiguity in Global Navigation Satellite Systems GNSSs is considered as a global quadratic mixed integer programming task which can be transformed into a pure integer problem with a given digit of accuracy Three alternative algorithms are suggested two of which are based on local and global linearization via McCormick Envelopes and Machine learning techniques MLT that offer effective tools for stochastic process modelling The Stochastic Modelling section is extended by the stochastic modelling via MLT and their effectiveness is compared with that of the modelling via stochastic differential equations SDE Mixing MLT with SDE also known as frequently Neural Differential Equations is also introduced and illustrated by an image classification via a regression problem
