Age ,1910 **Order Statistics** Herbert A. David,Haikady N. Nagaraja,2004-03-22 This volume provides an up to date coverage of the theory and applications of ordered random variables and their functions Furthermore it develops the distribution theory of OS systematically Applications include procedures for the treatment of outliers and other data analysis techniques Even when chapter and section headings are the same as in OSII there are appreciable changes mostly additions with some obvious deletions Parts of old Ch 7 for example are prime candidates for omission Appendices are designed to help collate tables computer algorithms and software as well as to compile related monographs on the subject matter Extensive exercise sets will continue many of them replaced by newer ones Helical Wormlike Chains in Polymer Solutions Hiromi Yamakawa,Takenao Yoshizaki,2016-02-22 This book presents the helical wormlike chain model a general model for both flexible and semiflexible polymer chains It explains how statistical mechanical hydrodynamic and dynamic theories of their solution properties can be developed on the basis of this model This new second edition has been carefully updated and thoroughly revised It includes a new chapter covering Simulation and More on Excluded Volume Effects as well as the discussion of new experimental data and the application of the theory to ring polymers The authors provide analysis of important recent experimental data by the use of their theories for flexible polymers over a wide range of molecular weights including the oligomer region and for semiflexible polymers including biological macromolecules such as DNA This is all clearly illustrated using a reasonable number of theoretical equations tables figures and computer aided forms which support the understanding of the basic theory and help to facilitate its application to experimental data for the polymer molecular characterization **Engineering News-record** ,1894 *Institutional Innovation and Change in Value Chain Development* Holly A. Ritchie,2016-03-02 George Bernard Shaw once said that reasonable people adapt themselves to the world but unreasonable people adapt the world to themselves In a sense this book explores how these so called unreasonable people may interact to re fashion the world around them in fragile economic development Drawing on empirical research in the volatile and traditional context of Afghanistan the study investigates the challenge of poor women s participation in business and diverse outcomes for local development Institutional Innovation and Change in Value Chain Development takes a unique look at nuanced institutional phenomena through the lens of social institutions with a subtle appreciation of the interaction of structure and agency Drawing on in depth qualitative research in Afghanistan the case studies specifically investigate the transformation of the women s norm of purdah and the subsequent development of new market institutions in three women s enterprises Shedding new light on the opaque process of institutional change the research shows that external actors such as NGOs can both initiate and guide institutional development in fragile environments Yet there may be limitations to their endeavours with strong resistance from local power holders Meanwhile dominant entrepreneurs are shown to play a major role in fostering institutional development pathways This influences the scope of inclusion and exclusion in enterprise and value chains and broader streams of socio economic development **Engineering News** ,1907 **Broken Chain of**
