The Tree Of Knowledge The Biological Roots Of Human Understanding:

Tree of Knowledge Humberto R. Maturana, Francisco J. Varela, 1992 Knowing how we know is the subject of this book. Its authors present a new view of cognition that has important social and ethical implications for they assert the only world we humans can have is the one we create together through the actions of our coexistence. Written for a general audience as well as for students, scholars and scientists and abundantly illustrated with examples from biology, linguistics and new social and cultural phenomena, this revised edition includes a new afterword by Dr. Varela in which he discusses the effect the book has had in the years since its first publication. Integral Theory and Transdisciplinary Action Research in Education Bohac Clarke, Veronika, 2018-12-28 With its growing recognition in education, the importance of Integral Theory is slowly entering mainstream academia through interdisciplinary and transdisciplinary research. Addressing the theory's complexity is important for researchers to learn how to apply it in their classrooms and promote a more inclusive educational environment. Integral Theory and Transdisciplinary Action Research in Education provides emerging research exploring the theoretical and practical aspects of the Integral Theory model and its applications within educational contexts. With a diverse array of research problems approached through an inclusive theory framework and featuring coverage on a broad range of topics such as graduate student research, inclusion, culture and organizational learning processes, this publication is ideally designed for graduate students, educators, academicians, researchers, scholars, educational administrators and policymakers seeking current research on the utility and promise of Integral Theory as a meta framework for methodological pluralism and transdisciplinary research. **Words Made Flesh** Justine Bakker, David Kline, 2025-06-03 The first sustained treatment of religion and religions in the scholarship of a prominent Caribbean thinker, Sylvia Wynter, is a profoundly transdisciplinary scholar whose works span an impressive array of theory, literature, science, anthropology, philosophy and religious studies as well as different forms including essays, plays, a novel and a 935 page unpublished manuscript entitled *Black Metamorphosis: New Natives in a New World*. Whatever the medium, Wynter frequently engages religion as a relevant category of analysis, from reflections on Christianity, Islam and Rastafarianism to the category and role of religion as a universal aspect of human social production. Wynter's writings have received enthusiastic attention by scholars in Black studies, Caribbean theory, critical race theory, literature and philosophy. But until recently, little scholarly writing exists that directly engages the topic of religion in her corpus. *Words Made Flesh* seeks to fill this gap by focusing exclusively on religion, religions and religiosity in her work. Bringing together scholars that provide a wide variety of theoretical perspectives on religion, political theology, social theory and science studies, this book offers an in-depth engagement with one of the most innovative and important thinkers of the last forty years and illustrates how Wynter's writing has significant implications for the study of religion and religion's relationship to colonialism, race, humanism, science and political theology. **Unifying Biology** Vassiliki Betty Smocovitis, 1996-12 *Unifying Biology* offers a historical reconstruction of one of the most important yet elusive episodes in

the history of modern science the evolutionary synthesis of the 1930s and 1940s For more than seventy years after Darwin proposed his theory of evolution it was hotly debated by biological scientists It was not until the 1930s that opposing theories were finally refuted and a unified Darwinian evolutionary theory came to be widely accepted by biologists Using methods gleaned from a variety of disciplines Vassiliki Betty Smocovitis argues that the evolutionary synthesis was part of the larger process of unifying the biological sciences At the same time that scientists were working toward a synthesis between Darwinian selection theory and modern genetics they were according to the author also working together to establish an autonomous community of evolutionists Smocovitis suggests that the drive to unify the sciences of evolution and biology was part of a global philosophical movement toward unifying knowledge In developing her argument she pays close attention to the problems inherent in writing the history of evolutionary science by offering historiographical reflections on the practice of history and the practice of science Drawing from some of the most exciting recent approaches in science studies and cultural studies she argues that science is a culture complete with language rituals texts and practices Unifying Biology offers not only its own new synthesis of the history of modern evolution but also a new way of doing history **Cow Up a**
