chronological sequence of their creation based on a consideration of stratigraphy overlapping layers from neighboring features and the relative degradation of surface features Using this sequence as a way to convey the relative ages of lunar features the author presents various theories concerning the Moon's impact and thermal history e g the available evidence allows for constraints to be placed on the duration of the Late Heavy Bombardment period The relationships between impact dynamics and variations in the gravity field of the Moon are also discussed The new mission data makes possible this renewed conjecture about the history and evolution of the Moon which is presented here with much worthwhile information for amateurs and professionals alike
