Inspiration for the wireless revolution The big Geneva Telecom 99 exhibition will probably go down in history as the moment when Wireless Application Protocol WAP made its debut in the world A slew of vendors launched their first WAP phones and carriers announced their first WAP services And this time it's Europe that's the frontrunner For once I'm not proud to be an American said Larry Ellison the CEO of softwaremaker Oracle in a speech delivered at Telecom 99 Europe is at least 18 months ahead of the United States in deploying WAP The Telecom 99 show could mark the beginning of a bright very bright future for WAP Analysts predict that a significant part of Internet access will be via wireless devices within a few years It's important not to get carried away When the computer industry gets hold of a new concept like WAP it becomes the Next Big Thing Vendors pre-announce products and the mass media prints hype When the revolution fails to materialize during the following months the hype will die soon

But this time it's different. The business case is overwhelming; the numbers are staggering, and it's the cash-loaded telecom industry that is delivering the key products. *Guide to Wireless Network Security* John R. Vacca, 2006-10-16 1

INTRODUCTION With the increasing deployment of wireless networks, 802.11 architecture in enterprise environments, IT enterprises are working to implement security mechanisms that are equivalent to those existing today for wire-based networks. An important aspect of this is the need to provide secure access to the network for valid users. Existing wired network jacks are located inside buildings already secured from unauthorized access through the use of keys, badge access, and so forth. A user must gain physical access to the building in order to plug a client computer into a network jack. In contrast, a wireless access point (AP) may be accessed from off the premises if the signal is detectable—for instance, from a parking lot adjacent to the building. Thus, wireless networks require secure access to the AP and the ability to isolate the AP from the internal private network prior to user authentication into the network domain. Furthermore, as enterprises strive to provide better availability of mission-critical wireless data, they also face the challenge of maintaining that data's security and integrity. While each connection with a client, a supplier, or an enterprise partner can improve responsiveness and efficiency, it also increases the vulnerability of enterprise wireless data to attack. In such an environment, wireless network security is becoming more important every day. Also, with the growing reliance on e-commerce, wireless network-based services, and the Internet, enterprises are faced with an ever-increasing responsibility to protect their systems from attack. **IP in Wireless Networks** Basavaraj Patil, 2003. IP in Wireless Networks is the first network professional's guide to integrating IP in 2G, 2.5G, and 3G wireless networks. It delivers systematic expert implementation guidance for every leading wireless network, including 802.11, Bluetooth, GSM, GPRS, W-CDMA, cdma2000, and i-mode. In-depth coverage encompasses architecture, technical challenges, deployment, and operation strategies, mobility models, routing, and applications. The book presents future evolution of the Wireless IP Networks with emerging applications and the role of standardization bodies. **802.11 Wireless**
