We Forget and How to Remember Better Andrew E. Budson, Elizabeth A. Kensinger, 2023 One of us Elizabeth had the opportunity to conduct research with a gentleman named Henry Molaison better known by his initials H M 1 who had the interior portion of his left and right temporal lobes the part of your brain next to your temples removed in 1953 because of epileptic seizures that were difficult to control From a technical standpoint the surgical procedures went fine But as he recovered the doctors and researchers soon noticed something very troubling he was unable to form any new memories He could read and talk and if you were having a brief conversation with him you would probably not notice anything amiss But family members would visit and although he knew who they were he would have no memory of them coming New doctors would introduce themselves and the next day or even the next hour he did not recall that he had met them It was then that the doctors understood that somehow the removal of those parts of the temporal lobe caused him to become completely amnesic **Rethinking Autism** Lynn H. Waterhouse, Lynn Waterhouse, 2012-09-12 The media scientific researchers and the Diagnostic and Statistical Manual all refer to autism as if it were a single disorder or a single disorder over a spectrum However autism is unlike any single disorder in a variety of ways No single brain deficit is found to cause it no single drug is found to affect it and no single cause or cure has been found despite tremendous research efforts to find same Rethinking Autism reviews the scientific research on causes symptomology course and treatment done to date and draws the potentially shocking conclusion that autism does not exist as a single disorder The conglomeration of symptoms exists but like fever those symptoms aren't a disease in themselves but rather a result of some other cause s Only by ceasing to think of autism as a single disorder can we ever advance research to more accurately parse why these symptoms occur and what the different and varied causes may be Autism is a massive worldwide problem with increasing prevalence rates now thought to be as high as 1 in 38 children Korea and 1 in 100 children CDC US Autism is the 3rd most common developmental disability 400 000 people in the United States alone have autism Autism affects the entire brain including communication social behavior and reasoning and is lifelong There is no known cause and no cure Funding for autism research quadrupled from 1995 to 2000 up to 45 million and the Interagency Autism Coordinating Committee has recommended 1 billion funding from 2010 2015
