Real-World Applications of Evolutionary Computing Stefano Cagnoni,Riccardo Poli,George D. Smith,David Corne,Martin Oates,Emma Hart,Pier L. Lanzi,Egbert J. Willem,Yun Li,Ben Paechter,Terence C. Fogarty,2003-07-31 The increasingly active eld of Evolutionary Computation EC provides val ble tools inspired by the theory of natural selection and genetic inheritance to problem solving machine learning and optimization in many real world app cations Despite some early intuitions about EC that can be dated back to the vention of computers and a better formal de nition of EC made in the 1960s the quest for real world applications of EC only began in the late 1980s The dramatic increase in computer performances in the last decade of the 20th c tury gave rise to a positive feedback process EC techniques became more and more applicable stimulating the growth of interest in their study and allowing in turn new powerful EC paradigms to be devised In parallel with new theoretical results the number of elds to which EC is being applied is increasing day by day along with the complexity of applications and application domains In particular industrially relevant elds such as signal and image processing computer vision pattern recognition industrial control telecommunication scheduling and timetabling and aerospace engineering are employing EC techniques to solve complex real world problems

eIoT Steffi O. Muhanji,Alison E. Flint,Amro M. Farid,2019-02-20 This open access book explores the collision between the sustainable energy transition and the Internet of Things IoT In that regard this book s arrival is timely Not only is the Internet of Things for energy applications herein called the energy Internet of Things eIoT rapidly developing but also the transition towards sustainable energy to abate global climate is very much at the forefront of public discourse It is within the context of these two dynamic thrusts digitization and global climate change that the energy industry sees itself undergoing significant change in how it is operated and managed This book recognizes that they impose five fundamental energy management change drivers 1 the growing demand for electricity 2 the emergence of renewable energy resources 3 the emergence of electrified transportation 4 the deregulation of electric power markets 5 and innovations in smart grid technology Together they challenge many of the assumptions upon which the electric grid was first built The goal of this book is to provide a single integrated picture of how eIoT can come to transform our energy infrastructure This book links the energy management change drivers mentioned above to the need for a technical energy management solution It then describes how eIoT meets many of the criteria required for such a technical solution In that regard the book stresses the ability of eIoT to add sensing

decision making and actuation capabilities to millions or perhaps even billions of interacting smart devices With such a large scale transformation composed of so many independent actions the book also organizes the discussion into a single multi layer energy management control loop structure Consequently much attention is given to not just network enabled physical devices but also communication networks distributed control decision making and finally technical architectures and standards Having gone into the detail of these many simultaneously developing technologies the book returns to how these technologies when integrated form new applications for transactive energy In that regard it highlights several eIoT enabled energy management use cases that fundamentally change the relationship between end users utilities and grid operators Consequently the book discusses some of the emerging applications for utilities industry commerce and residences The book concludes that these eIoT applications will transform today s grid into one that is much more responsive dynamic adaptive and flexible It also concludes that this transformation will bring about new challenges and opportunities for the cyber physical economic performance of the grid and the business models of its increasingly growing number of participants and stakeholders
