Utilisation and Management of Medicinal Plants V. K. Gupta, 2014 **Utilisation and Management of Medicinal Plants** Vijay Kumar Gupta, Anil Kumar Verma, Sushma Koul, Medicinal Plants Utilisation and Conservation Mr. Ajeet Singh, 2018-05-14 Discussing the balance between utilization and conservation this book provides strategies for sustainable harvesting biodiversity protection and policy frameworks to preserve medicinal plant resources for future generations

Utilisation and Management of Medicinal Plants Vol. 3 Gupta Vijay Kumar, 2018 **Plant and Human Health, Volume 1** Munir Ozturk, Khalid Rehman Hakeem, 2018-10-02 Early anthropological evidence for plant use as medicine is 60 000 years old as reported from the Neanderthal grave in Iraq The importance of plants as medicine is further supported by archeological evidence from Asia and the Middle East Today around 1 4 billion people in South Asia alone have no access to modern health care and rely instead on traditional medicine to alleviate various symptoms On a global basis approximately 50 to 80 thousand plant species are used either natively or as pharmaceutical derivatives for life threatening conditions that include diabetes hypertension and cancers As the demand for plant based medicine rises there is an unmet need to investigate the quality safety and efficacy of these herbals by the scientific methods Current research on drug discovery from medicinal plants involves a multifaceted approach combining botanical phytochemical analytical and molecular techniques For instance high throughput robotic screens have been developed by industry it is now possible to carry out 50 000 tests per day in the search for compounds which act on a key enzyme or a subset of receptors This and other bioassays thus offer hope that one may eventually identify compounds for treating a variety of diseases or conditions However drug development from natural products is not without its problems Frequent challenges encountered include the procurement of raw materials the selection and implementation of appropriate high throughput bioassays and the scaling up of preparative procedures Research scientists should therefore arm themselves with the right tools and knowledge in order to harness the vast potentials of plant based therapeutics The main objective of Plant and Human Health is to serve as a comprehensive guide for this endeavor Volume 1 highlights how humans from specific areas or cultures use indigenous plants Despite technological developments herbal drugs still occupy a preferential place in a majority of the population in the third world and have slowly taken roots as alternative medicine in the West The integration of modern science with traditional uses of herbal drugs is important for our understanding of this ethnobotanical relationship Volume 2 deals with the phytochemical and molecular characterization of herbal medicine Specifically it focuess on the secondary metabolic compounds which afford protection against diseases Lastly Volume 3 discusses the physiological mechanisms by which the active ingredients of medicinal plants serve to improve human health Together this three volume collection intends to bridge the gap for herbalists traditional and modern medical practitioners and students and researchers in botany and horticulture

Conservation and Utilization of Medicinal and Aromatic Plants S. Sahoo, 2001 Papers presented at the National

Seminar on Conservation and Utilization of Medicinal and Aromatic Plants held at Bhubaneswar during 4-6 December 2001 in Indian context

Medicinal and Aromatic Plants Tariq Aftab, Khalid Rehman Hakeem, 2021-03-27 Before the concept of history began humans undoubtedly acquired life benefits by discovering medicinal and aromatic plants (MAPs) that were food and medicine. Today a variety of available herbs and spices are used and enjoyed throughout the world and continue to promote good health. The international market is also quite welcoming for MAPs and essential oils. The increasing environment and nature conscious buyers encourage producers to produce high quality essential oils. These consumer choices lead to growing preference for organic and herbal based products in the world market. As the benefits of medicinal and aromatic plants are recognized, these plants will have a special role for humans in the future. Until last century the production of botanicals relies to a large degree on wild collection. However, the increasing commercial collection largely unmonitored trade and habitat loss lead to an incomparably growing pressure on plant populations in the wild. Therefore medicinal and aromatic plants are of high priority for conservation. Given the above we bring forth a comprehensive volume Medicinal and Aromatic Plants: Healthcare and Industrial Applications highlighting the various healthcare, industrial and pharmaceutical applications that are being used on these immensely important MAPs and its future prospects. This collection of chapters from the different areas dealing with MAPs caters to the need of all those who are working or have interest in the above topic.

BIODIVERSITY CONSERVATION AND BIORESOURCE UTILISATION FOR SUSTAINABLE DEVELOPMENT: A HOLISTIC APPROACH Prof. Hemanta Kumar Sahu, Prof. Biswajit Rath, Dr. Basanta Kumar Mohanta, Dr. Ashok Kumar Mallik, Dr. Debasis Nayak, Dr. Rabindra Kumar Mishra, Dr. Subhani Rath, 2025-05-04 The goal of sustainable development is to advance society while tackling existing needs without compromising the capability of upcoming generations to encounter their own. Sustainable development is constantly looking for ways to strike a balance between sociocultural preservation, environmental preservation, economic growth and development, prevention and well-being. Protection, restoration and promotion of sustainable use of terrestrial ecosystems, handling forests sustainably, prevention of desertification, stopping and retreating land degradation and uncertain biodiversity loss are the objectives of Sustainable Development Goal 15 of the 2030 Agenda for Sustainable Development. In this case, ecosystems and biodiversity are key components of many of the Sustainable Development Goals (SDGs) and related objectives. Since biodiversity is at the heart of many economic activities, particularly those involving crop and livestock, agriculture, forestry and fishing, a large portion of the human population is closely depending on their surrounding natural resources for survival and many of them are the utmost helpless people rely solely on biodiversity to meet their daily subsistence needs. The present book Biodiversity Conservation and Bioresource Utilisation for Sustainable Development: A Holistic Approach which includes 21 chapters is an attempt to discuss the present status of the biodiversity conservation and their use for sustainable development which includes exploiting natural resources responsibly, reducing pollution, mitigating climate change, ethnomedicine etc. Plants have

traditionally been used for the treatment of human ailments The article Ethnomedicinal Practices of the Kolha Tribe of Khejuripada Village Mayurbhanj Odisha of Menjoti Naik Basanta Kumar Mohanta Mahasweta Mohanta Manu Naik and Samir Mahrana emphasized the importance of documenting and preserving the traditional healing knowledge regarding ethnomedicinal practices of the Kolha tribe of village Khajuripada of Kusumi block Mayurbhanj Odisha to ensure its preservation for future generations Similarly in their work Akash Minz Prabhasini Sundi Subhani Rath recorded the indigenous and standard practices for human diseases control of the ethnic groups Oraon Kharia Munda etc in Hemgir block Sundargarh Odisha Which showed that traditional medicine mainly involving the use of medicinal plants is playing a significant role in meeting the primary healthcare needs of these local communities of the study area The floral and faunal resources of Similipal Biosphere Reserve are having various types of medicinal and economic values Through their articles on the wild edible mushroom of Similipal Biosphere Reserve when Jiban Jyoti Panda Debasis Nayak and Yugal Kishore Mohanta tried to analyse the Potential Aspects of the Wild Edible Mushroom of Similipal Biosphere Reserve and discussed the Ethnomedicinal Value Nutritional Aspect Bioactive Compounds and Bioactivity Bioactivity Human Diseases Industrially Important Enzymes etc Shubham Pradhan Bijayananda Sahoo Satyabrata Dash and Biswajit Rath aimed to investigate the phytochemical composition and bioactive potential of lichens from Similipal Biosphere Reserve and highlighted the chemical diversity and bioactive potential of corticolous lichens Correspondingly Dibya Ranjan Nayak Shubham Pratik Mohanta Subhani Rath have discussed about the Scientific Importance of Bee Forage Plants Key Floral Characteristics Supporting Bees in Odisha Ecological Significance in Odisha Economic and Agricultural Linkage Agricultural Crops Forest and Wild Flora Horticultural Plants Ecological Importance of Honey Bee Plant Interactions including Pollination Services Biodiversity Conservation Soil and Water Health Economic Significance Apiculture Development Employment and Women Empowerment Organic and Niche Market Potential etc The Current distribution status threats and conservation of Indian Skimmers is a major content of Gatikrishna Behera and Ashok Kumar Mallik article where they explored the current distribution and status of this remarkable bird highlighting its populations in the Mahanadi Ganges and Brahmaputra rivers And highlighted the bird s ecological significance within riverine ecosystems By addressing these challenges we can work towards a brighter future for this remarkable species The fishing industry is a crucial component of global food production and economic growth but it also generates vast amounts of waste including fish scales bones skin and internal organs These by products if discarded improperly contribute to environmental pollution The article rethinking fish waste transforming an environmental challenge into a sustainable opportunity of Gargee Mohanty explores the current scale of fish waste generation innovative solutions for repurposing it and the necessary steps for product development regulatory approvals and commercialization Consistently Bishnupriya Hansdah and A A Singha analysed the In vitro micropropagation of a valuable medicinal plant *Paederia foetida* L using nodal explants In their survey on the major cause and remedies Of Human Sloth Bear Conflicts Nibedita Mohapatra

Bussmann,2023-08-25 Natural resources and associated biological diversity provide the basis of livelihood for humans particularly in rural areas and mountain regions around the world Over centuries indigenous peoples traditional societies and local communities have developed their own specific knowledge regarding plant use management and conservation The history of plant use by humans as food and to treat diverse ailments dates back to ancient civilizations Even though the advent of allopathic medicine has somehow minimized the role of medicinal plants in favor of synthetic drugs a number of modern drug discoveries have been based on medicinal plants used by indigenous peoples Ethnobiology is the burgeoning interdisciplinary scientific field which covers all sorts of interactions between plants and people and Central

Asia is recognized as a plant diversity hot spot. The mountains and valleys of this region are rich in unique medicinal and food plant species. Local communities residing in the mountain regions of Central Asia possess unique knowledge of surrounding resources which is the result of many years of interaction with and selection of the most desirable and pervasive plant species present. In this context, this book provides comprehensive information on cross culture variation in the traditional uses of plants, fungi and animal species as food, medicine and for cultural purposes among the diverse communities of Uzbekistan. The key areas of focus include plant diversity in Uzbekistan, cross cultural variation in traditional uses of plant species, high value medicinal and food plant species and threats and conservation status of plant species and traditional knowledge.

Bioprospecting of Tropical Medicinal Plants Karuppusamy Arunachalam, Xuefei Yang, Sreeja Puthanpura Sasidharan, 2023-08-30. This book focuses on natural products in particular medicinal plants and their derived products as an indispensable source of bioactive molecules that serve as either drug candidates or lead compounds for drug design and discovery. There are several advantages for plant derived therapeutics including wide availability, diverse pharmacological actions and a generally good profile of safety and tolerability. Over the recent years there have been numerous reports from clinical studies testifying the efficacy and safety of medicinal plants and phytochemicals in treating human diseases. A plethora of basic studies has also unraveled molecular mechanisms underlying the health benefits of herbal medicines. Nevertheless, issues such as identification of bioactive ingredients, standardization of the products and drug interactions remain to be systematically documented. **Bioprospecting of Tropical Medicinal Plants** represents a comprehensive analysis of natural products, mainly medicinal plants and phytochemicals. It includes detailed medicinal properties and pharmacological action from in vitro models to clinical trials. The goal is to present the readers a carefully curated collection of plant derived natural products and their underlying molecular mechanisms.

Herbal Medicine Phytochemistry Sylvester Chibueze Izah, Matthew Chidozie Ogwu, Muhammad Akram, 2024-07-09. This book offers a comprehensive perspective of herbal medicine, phytochemistry and explores the application of plant extracts as bioactive compounds in disease prevention and treatment in modern or traditional medicine. The book starts with an introduction to the history and value of herbal medicine followed by 3 parts covering the main phytochemical components and metabolites in herbal medicine, different uses and practices in herbal medicine including a region wise analysis of methods and practices and an overview of regulations and policies for herbal medicinal practitioners and the advances and challenges in quality assessment of herbal medicine. Plants generally have the tendency to bioaccumulate trace metals from the environment and they are easily contaminated by microorganisms from water sources and poor hygiene practices of the herbalist. Quality assessment and assurance is thus a pertinent challenge in herbal medicine practice i.e. in remedy formulation and application and this book offers an authoritative perspective on this topic covering aspects such as quality control strategies, preparation techniques, chemical quantification in phytomedicine and the efficacy and safety of herbal remedies. Moreover, in this book readers will find

valuable insights into the latest trends and developments in the field and a critical review of the application of medicinal plants to treat cardiovascular digestive respiratory neurological and reproductive diseases Particular attention is given to the advances and trends in the field and readers will learn about the latest biotechnological approaches the use of nanotechnology in herbal medicine metabolomic analysis of medicinal plants big data application in herbal medicine and the value of herbal medicine towards sustainability Given its breadth this book is aimed at researchers academics practitioners and professionals working in the fields of natural life health clinical and biomedical sciences and interested in herbal remedies pharmacology pharmacognosy human nutrition and dietetics plant biology and biotechnology microbiology

Medicinal And Aromatic Plants: Utilization And Conservation Techniques Shukla, Gopal, Bidhan Roy, 2020-09-24 Medicinal and aromatic plants MAPs are invaluable natural resources of use to human race without which the survival of human animal race is incredible There is an enormous diversity of plants which are put into medicinal beauty care and culinary purposes Cultivation of commercially important medicinal plants is in high demand as the global community is growing towards a green and herbal oriented approach India as a country has thousands of years old traditional medicinal systems which rely solely on medicinal plants There is a gradual loss of medicinal plants with the increasing demand of plant derived drugs Majority of medicinal plants are still collected from the wild This doesn't meet the demand and thereby pave ways to adulterants The over exploitation and ignorant activities cause biodiversity loss Farm production of MAPs in these days is extremely vulnerable to underlying climate risk Sustainable management of these resources requires urgent action for environmental stability and improvement of livelihood New income generating opportunities are opening up for rural populations and in particular for small scale farmers as well as marginal farmers through MAPs cultivation New generations are not well aware of the various uses of many plants to which it was put before Thus there is an urgent need to spread the knowledge and conserve the wild populations of medicinal plant diversity in various forest areas of India Considering the importance of the MAPs an attempt was taken in this edited book to understand and highlight the role of MAPs in livelihood improvement and income generation through cultivation conservation and utilization Most of the chapters in this book dealt with individual medicinal plants in detail Two chapters have also been included on pests and diseases management of MAPs Nowadays IPR issues are more important One chapter has been included on IPR issues on medicinal plants A chapter also devoted on value addition of the medicinal plant products
