of Pumps and Motors for Photovoltaic Water Pumping Systems David Waddington, F. Ann Herlevich, 1982 Two electric motor driven water pumps were tested in conjunction with a photovoltaic PV array that provided the electrical energy to run the pumps The purpose of the tests was to evaluate the performance of currently available low cost pumping systems powered by PV arrays The performance and cost of these systems were compared with analogous data from similar higher priced pumps and motors currently used with many PV water pumping systems The conclusion drawn from this experiment is that commercially available low cost water pump systems will perform satisfactorily when powered by PV arrays
