Ecoregionalism Jon Marco Church, 2020-05-25 This book provides a comprehensive understanding of environmental regionalism at the international level analyzing the concept and identifying recurring patterns from six in depth case studies While ecoregions or environmental regions are defined on ecological boundaries rather than administrative criteria ecoregionalism is the idea that regional dynamics should cluster around ecoregions while ecoregionalization is the tendency of regional dynamics to cluster around ecoregions Focusing on the international level this book presents six cases of ecoregional processes from around the world and the regional environmental agreements two are terrestrial the Alps and the Andes two are marine the Mediterranean Sea and the Baltic Sea two are related to freshwater ecosystems the Amu Darya in Central Asia and the Great Lakes in North America The book analyzes both ecoregional processes focused on the environment as well as intersectoral ecoregional processes The case studies are analyzed based on the ecoregional governance framework developed by the author for this book Despite the diversity of context the similarity of the governance system of the six cases is striking Several recurring patterns have been identified which may also extend to the subnational level They are not design principles but may be taken into consideration for the design or redesign of current and future regional environmental agreements and processes This book will be of great interest to students and scholars of environmental politics natural resource management spatial planning and international relations

, 2025-01-10 The impacts of population growth climate change and water scarcity and variability on a country's economy or society in addition to the sheer need to harness international rivers for domestic and regional purposes have made the management of transboundary freshwater a subject of great import Over the past several decades research in various disciplines utilizing a variety of methodologies has explored these issues focusing on freshwater's strategic importance as well as conflict cooperation and negotiation over shared water bodies rivers lakes aquifers This multi volume set seeks to contribute to this still burgeoning body of literature by focusing on several key themes that can help explain and recognize successes and failures in transboundary freshwater management In particular the set seeks to bring together original scholarship focusing on international law technology institutions formal and informal and the interplay of domestic and international affairs Each edited volume in the set aims to build on extant research while also fostering new paths of inquiry Overall the set seeks to become a guide for both academics and practitioners hoping to better understand the joint management of this precious natural resource from socio political legal economic and technological perspectives Volume 1 explores international law for shared freshwater resources both surface and subsurface waters from a multidisciplinary

perspective It explains the role of international water law IWL and or specific norms within particular contexts case studies and critically examines that role and its relative success or failure in achieving the intended objectives Volume 2 explores the roles of and limitations of technologies and their applications in the management of transboundary water and wastewater It presents case studies and legal and political analyses that focus on the potential or actual roles and implications of the technologies in transboundary policy and management rather than detailed explications of the technologies themselves Volume 3 contributes to the growing literature seeking to understand how when and if institutions broadly defined impact states abilities to address their joint water disputes The volume presents a combination of single comparative and empirical analyses of cases across the world about the role of institutions in facilitating collaboration over transboundary water resources and mitigating conflict Volume 4 seeks to make sense of the interplay of domestic transnational and international dynamics in explaining conflict and cooperation over water through single or comparative case studies as well as analyses of on the ground transboundary water management experiences arising from these complex political dimensions **Policy**
