Biological Wastewater Treatment C. P. Leslie Grady, Jr., Glen T. Daigger, Nancy G. Love, Carlos D. M. Filipe, 2011-05-09 Following in the footsteps of previous highly successful and useful editions Biological Wastewater Treatment Third Edition presents the theoretical principles and design procedures for biochemical operations used in wastewater treatment processes It reflects important changes and advancements in the field such as a revised treatment of the microbiology and kinetics of nutrient removal and an update of the simulation of biological phosphorous removal with a more contemporary model See what's new in the Third Edition A chapter devoted to the description and simulation of anaerobic bioreactors Coverage of applications of submerged attached growth bioreactors Expanded discussion of modeling attached growth systems Increased information on the fate and effects of trace contaminants as they relate to xenobiotic

organic chemicals A chapter on applying biochemical unit operations to design systems for greater sustainability The book describes named biochemical operations in terms of treatment objectives biochemical environment and reactor configuration introduces the format and notation used throughout the text and presents the basic stoichiometry and kinetics of microbial reactions that are key to quantitative descriptions of biochemical operations It then examines the stoichiometry and kinetics used to investigate the theoretical performance of biological reactors containing microorganisms suspended in the wastewater The authors apply this theory to the operations introduced taking care to highlight the practical constraints that ensure system functionality in the real world The authors focus on further biochemical operations in which microorganisms grow attached to solid surfaces adding complexity to the analysis even though the operations are often simpler in application They conclude with a look to the future introducing the fate and effects of xenobiotic and trace contaminants in wastewater treatment systems and examining how the application of biochemical operations can lead to a more sustainable world

Environmental Dispute Resolution Lawrence S. Bacow, Michael Wheeler, 2013-06-29 This book has its origins in an M I T research project that was funded by the U S Environmental Protection Agency EPA Our immediate objective was to prepare a set of case studies that examined bargaining and negotiation as they occurred between government environmental advocates and regulatees throughout the traditional regulatory process The project was part of a larger effort by the EPA to make environmental regulation more efficient and less litigious The principal investigator for the research effort was Lawrence Susskind of the Department of Urban Studies and Planning Eight case studies were prepared under the joint supervision of Susskind and the authors of this book Studying the negotiating behavior of parties as we worked our way through an environmental dispute proved enlightening We observed missed opportunities for settlement negotiating tactics that backfired and strategies that appeared to be grounded more in intuition than in thoughtful analysis At the same time however we were struck by how often the parties ultimately managed to muddle through People negotiated not out of some idealistic commitment to consensus but because they thought it better served their own interests When some negotiations reached an impasse people improvised mediation These disputants succeeded in spite of legal and institutional barriers even though few of them had a sophisticated understanding of negotiation

Biological Wastewater Treatment, Revised and Expanded Carlos D.M. Filipe, C.P. Leslie Grady, Jr., 1998-10-15 Written by noted experts in the field sharing extensive academic and industrial experience this thoroughly updated Second Edition covers commonly used and new suspended and attached growth reactors The authors discuss combined carbon and ammonia oxidation activated sludge biological nutrient removal aerobic digestion anaerobic processes lagoons trickling filters rotating biological contactors fluidized beds and biologically aerated filters They integrate the principles of biochemical processes with applications in the real world communicating approaches to the conception design operation and optimization of biochemical unit operations in a comprehensive yet lucid manner
