

Work Permit Instructions

Use this permit as a communication tool to inform employees of any known or potential hazards associated with the work to be performed. Preparing the Work Permit ensures that the job site is thoroughly tested and evaluated for fire and explosion hazards and possible sources of employee exposure to hazardous substances and job site conditions.

The MATHRIX Foreman (or H&SE Department) will prepare a Work Permit each day prior to the start of any work. This permit will be used in conjunction with any customer-issued permit ("Dual Permit with Others") or work authorization document. In addition, it may be used as a "Closed-Area Permit" if our Client does not use its own permitting system.

DO NOT BEGIN WORK WITHOUT CUSTOMER AUTHORIZATION.

Any time a Work Permit is cancelled, a new Work Permit must be prepared prior to beginning work.

As the Work Permit is being completed, all areas of the Permit must be considered in preparation for safe work. Contact the Matrix Project Manager or H&SE Department if there are any questions. Consult the Corporate H&SE Manual for additional information.

This permit becomes void when one of the following occurs:

- ☛ End of shift
- ☛ End of job
- ☛ Acceptable conditions cannot be maintained.

Instructions

GENERAL INFORMATION SECTION

The top section of page 1 contains general information (date, job number, client, location, tank number and scope of work). It is important to be as descriptive as possible when completing this section. When listing the scope of work, be sure to give as much detail as possible, especially if multiple tasks will be performed during the work shift.

The remainder of page 1 contains the following sections: Work Preparation, Hazard Awareness, Safety Equipment and Respiratory Protection. Each section contains a checklist of items common to the construction / maintenance / turnaround industry. Page 1 is to be completed for all work performed, whether it is hot Work, Confined Space, or both. Be as thorough as possible when completing these sections. **Note - At least one person with current First Aid & CPR certification must be available at the job site for the duration of each work shift.**

HOT WORK SECTION

Any time work performed by MATHRIX will result in a source of ignition (spark, flame, etc.) this section must be completed. The Hot Work Section is an inspection checklist of items commonly found in the construction / maintenance / turnaround industry. All possible sources of ignition must be considered when completing this section including, but not limited to: welding, grinding, torch-cutting, or electric-powered tools.

HAZARD ASSESSMENT

The Hazard Assessment Section contains a checklist list of common potential hazards that may be encountered when working in industrial plants and facilities. The person completing the Hazard Assessment must sign in space provided.

CONFINED SPACE SECTION

A Confined Space is defined as a space that an employee can enter, has limited access (exit), and is not designed for continuous occupancy. When completing this section you will be asked to classify the type of confined space that is to be entered. Below are descriptions of the classifications of a confined space. Check with the MATHRIX Project Manager or H&SE Department if there is any question regarding proper classification of the confined space.

A Permit Required Confined Space is defined as a Confined Space that contains **any** of the following four hazards: 1) A hazardous atmosphere; 2) Contains a liquid or freely divided solid material that could submerge or engulf an entrant in the space; 3) A internal shape that could cause an entrant to be trapped or asphyxiated; such as, inwardly converging walls or a floor that slopes downward and tapers to a smaller cross section; 4) Any other characteristic or condition that is recognized as a serious safety or health hazard.

A Non-Permit Confined Space is a confined space that does not contain any hazard capable of causing death or serious physical harm to an entrant. In addition, a non-permit confined space must have "two potential" to contain a hazardous atmosphere.

When completing the Confined Space Section of this permit, provide the following information: the names of Authorized Entrants and Authorized Attendants; type of communication system to be used in the event of an emergency and the name and number of the rescue service if work will be performed in a permit-required confined space. The Attendant is expected to record the entry and exit of each employee during the work shift on the Matrix Entrant Tracking Log.

JSA SECTION (refer to the back of this page)

A Job Safety Analysis (JSA) is used to "plan" safety into your work scope before work actually begins. The JSA process is intended to involve employees and sub-contractors in the hazard identification process and to ensure that hazards are reviewed with all concerned. The JSA is designed as a simple checklist to assist the supervisor in determining what may or may not be needed to perform the work safely for routine and non-routine activities; new processes; and changes in operators, products or services. Complete the JSA and then review it with all employees on the project, prior to issuing the Work Permit. Complete the JSA Assessment for PPS for jobs with many hazards and/or complex safety issues. In addition, at the top of the JSA, reference the Matrix Work Permit number found at the top of the work permit.
