Toward A New Climate Agreement Conflict Resolution And Governance:

Toward a New Climate Agreement Todd Cherry, Jon Hovi, David M. McEvoy, 2014-03-05 Climate change is one of the most pressing problems facing the global community. Although most states agree that climate change is occurring and is at least partly the result of humans' reliance on fossil fuels, managing a changing global climate is a formidable challenge. Underlying this challenge is the fact that states are sovereign, governed by their own laws and regulations. Sovereignty requires that states address global problems such as climate change on a voluntary basis by negotiating international agreements. Despite a consensus on the need for global action, many questions remain concerning how a meaningful international climate agreement can be realized. This book brings together leading experts to speak to such questions and to offer promising ideas for the path toward a new climate agreement. Organized in three main parts, it examines the potential for meaningful climate cooperation. Part 1 explores sources of conflict that lead to barriers to an effective climate agreement. Part 2 investigates how different processes influence states' prospects of resolving their differences and of reaching a climate agreement that is more effective than the current Kyoto Protocol. Finally, part 3 focuses on governance issues, including lessons learned from existing institutional structures. The book is unique in that it brings together the voices of experts from many disciplines such as economics, political science, international law, and natural science. The authors are academics, practitioners, consultants, and advisors. Contributions draw on a variety of methods and include both theoretical and empirical studies. The book should be of interest to scholars and graduate students in the fields of economics, political science, environmental law, natural resources, earth sciences, sustainability, and many others. It is directly relevant for policy makers, stakeholders, and climate change negotiators, offering insights into the role of uncertainty, fairness, policy linkage, burden sharing, and alternative institutional designs. Research Handbook on Climate Governance Karin Bäckstrand, Eva Löwbrand, 2015-11-27 The 2009 United Nations climate conference in Copenhagen is often represented as a watershed in global climate politics when the diplomatic efforts to negotiate a successor agreement to the Kyoto Protocol failed and was replaced by a fragmented and decentralized climate governance order. In the post-Copenhagen landscape, the top-down universal approach to climate governance has gradually given way to a more complex hybrid and dispersed political landscape involving multiple actors, arenas, and sites. The Handbook contains contributions from more than 50 internationally leading scholars and explores the latest trends and theoretical developments of the climate governance scholarship.

Sustainability Governance and Hierarchy Philippe Hamman, 2019-06-19 Sustainability Governance and Hierarchy provides a solid theoretically and empirically grounded reflection on the concept of sustainability governance. This idea has been growing in popularity in social science literature as well as among decision makers and governance actors as it brings together two vast fields of study that have sometimes been dismissed as vague or ideologically loaded. In order to link the concepts of sustainability and governance, the book is organized around the exploration of hierarchy issues which often lie in

the background of the existing literature but are not the focus of analysis The chapters reflect ongoing controversies and dialogue between scientists with different theoretical and thematic backgrounds who are all willing to participate in and contribute to a constructive effort to reach a more inclusive and more theoretically relevant stage for sustainability studies being content with merely global analyses The book is an innovative contribution to the hierarchy non hierarchy debate regarding governance arrangements in the field of sustainability and sustainability studies This book will be of interest to advanced students and scholars focusing on governance issues sustainability studies environmental studies as well as on the methodological aspects of the social sciences economy geography law philosophy political science sociology urbanism and planning This book is published with the support of the European Union the European Regional Development Fund ERDF and the Upper Rhine Interreg V programme as part of the Upper Rhine Cluster for Sustainability Research project

Beyond Treaties: Rethinking Legal Mechanisms for International Climate Governance Türkan Gülce Budak, 2025-04-05 This open access book examines the implications of the shift towards minilateralism for international climate law analysing how climate related trade measures and Paris Agreement compatible platforms may enhance global climate governance The landscape of international climate change law is evolving from a traditional consensus based treaty model characterized by comprehensive yet often slow moving agreements toward a more pragmatic approach known as minilateralism In this emerging paradigm smaller groups of countries negotiate and implement trade measures aimed at mitigating climate impacts An exemplary case is the European Green Deal which introduces climate related trade measures as a key instrument for achieving sustainability goals within and beyond Europe Additionally countries are exploring minilateral cooperation platforms within the Paris Agreement framework to further their climate objectives The central questions to be addressed in this book are twofold First how can the design of the minilateral schemes comply with the Paris Agreement s international cooperation common but differentiated responsibilities and respective capacities and market based mechanisms principles Second to what extent does the climate related trade measures conform with the WTO regime particularly with the non discrimination principles of the trade law namely most favoured nation and national treatment

The New Power Politics of Global Climate Governance Maximilian Terhalle, Charlotte Streck, 2018-04-19 This book is based on the assumption that great powers determine global politics and in this instance environmental politics It addresses the approaches of both established and rising powers and their implications for the advancement of international climate negotiations The new introduction looks at the key developments in this realm since 2013 examining the bilateral deals between China and the United States and the results of the UNFCCC s 21st Convention of the Parties COP convening at Paris in 2015 Two key features link the contributions of this volume their underlying assumption that major powers are the central actors in determining global environmental politics and their assessment of and implications of the approaches both of rising and established major powers for global climate norms One key argument of this volume is that today s geopolitics are about who

gets how much in the fiercely competitive race over the available carbon space The book concludes that prudently balancing power in the new century requires a fair sharing of burden among the existing and emerging powers In light of such burden sharing pluralistic domestic politics as well as diverging normative beliefs and worldviews require consideration of different conditions even if historical legacies of the industrialised world have increasingly been put into question as a political argument by the United States This book is based on a special issue of the journal *Climate Policy* *Governing Climate Change* Andrew Jordan,Dave Huitema,Harro van Asselt,Johanna Forster,2018-05-03 Climate change governance is in a state of enormous flux New and more dynamic forms of governing are appearing around the international climate regime centred on the United Nations Framework Convention on Climate Change UNFCCC They appear to be emerging spontaneously from the bottom up producing a more dispersed pattern of governing which Nobel Laureate Elinor Ostrom famously described as polycentric This book brings together contributions from some of the world s foremost experts to provide the first systematic test of the ability of polycentric thinking to explain and enhance societal attempts to govern climate change It is ideal for researchers in public policy international relations environmental science environmental management politics law and public administration It will also be useful on advanced courses in climate policy and governance and for practitioners seeking incisive summaries of developments in particular sub areas and sectors This title is also available as Open Access on Cambridge Core

Climate Change Finance and International Law Alexander Zahar,2016-12-01 Since 2010 a significant quantity of international climate change finance has begun to reach developing countries However the transfer of finance under the international climate change regime the legal and ethical obligations that underpin it the constraints on its use its intended outcomes and its successes failures and future potential constitutes a poorly understood topic *Climate Change Finance and International Law* fills this gap in the legal scholarship The book analyses the legal obligations of developed countries to financially support qualifying developing countries to pursue globally significant mitigation and adaptation outcomes as well as the obligations of the latter under the international regime of financial support Through case studies of climate finance mechanisms and a multitude of other sources this book delivers a rich legal and empirical understanding of the implementation of states climate finance obligations to date The book will be of interest to scholars and students of international law and policy international relations and the maturing field of climate change law *Linking the European Union Emissions Trading System* Charlotte Unger,2021-01-25 This book focuses on the linking of the European Union Emissions Trading System EU ETS with other independent regional ETS While rich practical and academic research has evolved on the economic and technical side of ETS linking political drivers and barriers have so far been underrepresented in this debate Filling this lacuna and based on international relations theory existing research and qualitative fieldwork this book introduces the range of political conditions that influence linking such as political leadership and stakeholder activity Specifically it analyzes which of these aspects have played a role in three different linking activities

of the EU 1 a failed linking attempt EU ETS California Cap and Trade Program 2 a successful linking treaty EU ETS Switzerland Emissions Trading System and 3 an agreed upon but not realized link EU ETS Australia Carbon Pricing Mechanism Through an interrogation of these examples Dr Unger concludes that it is not only the technical challenges or the overall economic benefit but rather domestic interests structural aspects and external international political developments that have jointly dominated linking activities especially those in which the EU takes part This book will be of great interest to scholars and policy makers working in climate policy and EU environmental politics

Formal Modeling in Social Science
Carol Mereshon, Olga Shvetsova, 2019-09-03 A formal model in the social sciences builds explanations when it structures the reasoning underlying a theoretical argument opens venues for controlled experimentation and can lead to hypotheses Yet more importantly models evaluate theory build theory and enhance conjectures Formal Modeling in Social Science addresses the varied helpful roles of formal models and goes further to take up more fundamental considerations of epistemology and methodology The authors integrate the exposition of the epistemology and the methodology of modeling and argue that these two reinforce each other They illustrate the process of designing an original model suited to the puzzle at hand using multiple methods in diverse substantive areas of inquiry The authors also emphasize the crucial though underappreciated role of a narrative in the progression from theory to model Transparency of assumptions and steps in a model means that any analyst will reach equivalent predictions whenever she replicates the argument Hence models enable theoretical replication essential in the accumulation of knowledge Formal Modeling in Social Science speaks to scholars in different career stages and disciplines and with varying expertise in modeling

Emissions Trading Schemes under International Economic Law
James Munro, 2018-08-09 The announcement by China that it will implement a national emissions trading scheme confirms the status of this instrument as the pre eminent policy choice for mitigating climate change China will join the dozens of existing and emerging schemes around the world from the EU to California South Korea to New Zealand that use carbon units otherwise known as emissions permits or carbon credits to trade in greenhouse gas emissions in a multi billion dollar global carbon market However to date there has been no consensus about this pre eminent policy instrument being regulated by international economic law through the World Trade Organization international investment agreements and free trade agreements Munro addresses this issue by evaluating whether carbon units qualify as goods services financial services and investments under international economic law and showing how international economic law applies to emissions trading scheme in diverse and unexpected ways Further by engaging in a comparative assessment of schemes around the world his book illustrates how and why all emissions trading schemes engage in various forms of violations of international economic law which would not in most instances be justified by environmental or other exceptions In doing so he demonstrates how such schemes can be designed or reformed in ways to ensure their future compliance

Architectures of Earth System Governance
Frank Biermann, Rakhyun E. Kim, 2020-05-07 International institutions are prevalent in world politics More than

a thousand multilateral treaties are in place just to protect the environment alone and there are many more And yet it is also clear that these institutions do not operate in a void but are enmeshed in larger highly complex webs of governance arrangements This compelling book conceptualises these broader structures as the architectures of global governance Here over 40 international relations scholars offer an authoritative synthesis of a decade of research on global governance architectures with an empirical focus on protecting the environment and vital earth systems They investigate the structural intricacies of earth system governance and explain how global architectures enable or hinder individual institutions and their overall effectiveness The book offers much needed conceptual clarity about key building blocks and structures of complex governance architectures charts detailed directions for new research and provides analytical groundwork for policy reform This is one of a series of publications associated with the Earth System Governance Project For more publications see www.cambridge.org/earth-system-governance

Economics of International Environmental Agreements M. Özgür Kayalica, Selim Çağatay, Hakan Mıhçı, 2017-02-17 International environmental agreements provide a basis for countries to address ecological problems on a global scale. However, countries are heterogeneous with respect to their economic structures and to the problems relating to the environment that they encounter. Therefore, economic externalities and global environmental conflicts are common and can cause problems in implementation and compliance with international agreements. *Economics of International Environmental Agreements* illuminates those issues and factors that might cause some countries or firms to take different positions on common problems. This book explores why international environmental agreements deal with some problems successfully but fail with others. The chapters address issues that are global in nature, such as transboundary pollution, provision of global public goods, individual preferences, inequality aversion, global cooperation, self-enforcing international environmental agreements, emission standards, abatement costs, environmental quota, technology agreement and adoption, and international institutions. They examine the necessary conditions for the improved performance of international environmental agreements, how cooperation among countries can be improved, and the incentives that can be created for voluntary compliance with international environmental agreements. This text is of great importance to academics, students, and policy makers who are interested in environmental economics, policy, and politics, as well as environmental law.

Governing Sustainable

Energies in China Geoffrey Chun-fung Chen, 2016-06-29 This book examines sustainable energy development in China, a non-liberal state, as a counterexample to conventional wisdom that effective policy outcomes are premised on the basis of decentralized governance. The use of sustainable energies as part of the solution for stabilising global warming has been promoted in industrialised countries for the past three decades. In the last ten years, China has expanded its renewable energy capacity with unprecedented speed and breadth. This phenomenon seems to contradict the principle of orthodox environmental governance in which stakeholder participation is deemed a necessary condition for effective policy outcomes. Based upon policy documents, news reports, and interviews with 32 policy makers, business leaders, and NGO practitioners in selected subnational governments, this book examines the politics of sustainable energy in China. It engages debates over the relationships among democratic prioritisation, environmental protection, and economic empowerment, arguing that China's quasi-corporatist model in the sustainable energy field challenges Western scholars' dominant assumptions about ecopolitics.

Research Handbook on International Law and Peace Cecilia M. Bailliet, 2019 Peace is an elusive concept, especially within the field of international law, varying according to historical era and between contextual applications within different cultures, institutions, societies, and academic traditions. This *Research Handbook* responds to the gap created by the neglect of peace in international law scholarship. Explaining the normative evolution of peace from the principles of peaceful co-existence to the UN declaration on the right to peace, this *Research Handbook* calls for the fortification of international institutions to

facilitate the pursuit of sustainable peace as a public good
