Toxic Bodies Hormone Disruptors And The Legacy Of Des:

Toxic Bodies Nancy Langston, 2010-03-02 In 1941 the Food and Drug Administration approved the use of diethylstilbestrol DES the first synthetic chemical to be marketed as an estrogen and one of the first to be identified as a hormone disruptor a chemical that mimics hormones Although researchers knew that DES caused cancer and disrupted sexual development doctors prescribed it for millions of women initially for menopause and then for miscarriage while farmers gave cattle the hormone to promote rapid weight gain Its residues and those of other chemicals in the American food supply are changing the internal ecosystems of human livestock and wildlife bodies in increasingly troubling ways In this gripping exploration Nancy Langston shows how these chemicals have penetrated into every aspect of our bodies and ecosystems yet the U S government has largely failed to regulate them and has skillfully manipulated scientific uncertainty to delay regulation Personally affected by endocrine disruptors Langston argues that the FDA needs to institute proper regulation of these commonly produced synthetic chemicals

Razing Kids Jeffrey C. Sanders, 2020-12-10 Children are the future Or so we like to tell ourselves In the wake of the Second World War Americans took this notion to heart Confronted by both unprecedented risks and unprecedented opportunities they elevated and perhaps exaggerated the significance of children for the survival of the human race Razing Kids analyzes the relationship between the postwar demographic explosion and the birth of postwar ecology In the American

West especially workers policymakers and reformers interwove hopes for youth environment and the future They linked their anxieties over children to their fears of environmental risk as they debated the architecture of wartime playgrounds planned housing developments and the impact of radioactive particles released from distant hinterlands They obsessed over how riot riddled cities War on Poverty era rural work camps and pesticide laden agricultural valleys would affect children Nervous about the world they were making their hopes and fears reshaped postwar debates about what constituted the social and environmental good

The Postcolonial World Jyotsna G. Singh, David D. Kim, 2016-10-04 The Postcolonial World presents an overview of the field and extends critical debate in exciting new directions It provides an important and timely reappraisal of postcolonialism as an aesthetic political and historical movement and of postcolonial studies as a multidisciplinary transcultural field Essays map the terrain of the postcolonial as a global phenomenon at the intersection of several disciplinary inquiries Framed by an introductory chapter and a concluding essay the eight sections examine Affective Postcolonial Histories Postcolonial Desires Religious Imaginings Postcolonial Geographies and Spatial Practices Human Rights and Postcolonial Conflicts Postcolonial Cultures and Digital Humanities Ecocritical Inquiries in Postcolonial Studies Postcolonialism versus Neoliberalism The Postcolonial World looks afresh at re-emerging conditions of postcoloniality in the twenty first century and draws on a wide range of representational strategies cultural practices material forms and affective affiliations The volume is an essential reading for scholars and students of postcolonialism

The Greening of Everyday Life John M. Meyer, Jens Kersten, 2016 This interdisciplinary volume develops a distinctive new way of talking about environmental concerns in post industrial society

The Lives of Lake Ontario Daniel Macfarlane, 2024-09-15 Lake Ontario has profoundly influenced the historical evolution of North America For centuries it has enabled and enriched the societies that crowded its edges from fertile agricultural landscapes to energy production systems to sprawling cities In The Lives of Lake Ontario Daniel Macfarlane details the lake's relationship with the Indigenous nations settler cultures and modern countries that have occupied its shores He examines the myriad ways Canada and the United States have used and abused this resource through dams and canals drinking water and sewage trash and pollution fish and foreign species industry and manufacturing urbanization and infrastructure population growth and biodiversity loss Serving as both bridge and buffer between the two countries Lake Ontario came to host Canada's largest megalopolis Yet its transborder exploitation exacted a tremendous ecological cost leading people to abandon the lake Innovative regulations in the later twentieth century such as the Great Lakes Water Quality Agreements have partially improved Lake Ontario's health Despite signs that communities are reengaging with Lake Ontario it remains the most degraded of the Great Lakes with new and old problems alike exacerbated by climate change The Lives of Lake Ontario demonstrates that this lake is both remarkably resilient and uniquely vulnerable

Debating New Approaches to History Marek Tamm, Peter Burke, 2018-10-04 With its innovative format Debating New Approaches to History addresses issues currently at the top of the discipline's theoretical and methodological agenda In its

chapters leading historians of both older and younger generations from across the Western world and beyond discuss and debate the main problems and challenges that historians are facing today Each chapter is followed by a critical commentary from another key scholar in the field and the author's response The volume looks at topics such as the importance and consequences of the digital turn in history what will history writing be like in a digital age the challenge of posthumanist theory for history writing how do we write the history of non humans and the possibilities of moving beyond traditional sources in history and establishing a dialogue with genetics and neurosciences what are the perspectives and limits of the so called neurohistory It also revisits older debates in history which remain crucial such as what the gender approach can offer to historical research or how to write history on a global scale *Debating New Approaches to History* does not just provide a useful overview of the new approaches to history it covers but also offers insights into current historical debates and the process of historical method in the making It demonstrates how the discipline of history has responded to challenges in society such as digitalization globalization and environmental concerns as well as in humanities and social sciences such as the material turn visual turn or affective turn This is a key volume for all students of historiography wanting to keep their finger on the pulse of contemporary thinking in historical research *Galileo's Middle Finger* Alice Dreger, 2016-04-05

Galileo's Middle Finger is historian Alice Dreger's eye opening story of life in the trenches of scientific controversy Dreger's chronicle begins with her own research into the treatment of people born intersex once called hermaphrodites Realization of the shocking surgical and ethical abuses conducted in the name of normalizing intersex children's gender identities moved Dreger to become an internationally recognized patient rights activist But even as the intersex rights movement succeeded Dreger began to realize how some fellow activists were using lies and personal attacks to silence scientists whose data revealed uncomfortable truths about humans In researching one case Dreger suddenly became a target of just these kinds of attacks Troubled she decided to try to understand more to travel the country and seek a global view of the nature and costs of these damaging battles *Galileo's Middle Finger* describes Dreger's long and harrowing journeys between the two camps for which she felt equal empathy social justice activists determined to win and researchers determined to put hard truths before comfort What emerges is a lesson about the intertwining of justice and truth and about the importance of responsible scholars and journalists to our fragile democracy *The Defoliation of America* Amy Marie Hay, 2021-12-14

In *The Defoliation of America* Amy M Hay profiles the attitudes understandings and motivations of grassroots activists who rose to fight the use of phenoxy herbicides commonly known as the Agent Orange chemicals in various aspects of American life during the post WWII era First introduced in 1946 these chemicals mimic hormones in broadleaf plants causing them to essentially grow to death while grass grains and other monocots remain unaffected By the 1950s millions of pounds of chemicals were produced annually for use in brush control weed eradication other agricultural applications and forest management The herbicides allowed suburban lawns to take root and become iconic symbols of success in American life The

production and application of phenoxy defoliants continued to skyrocket in subsequent years encouraged by market forces and unimpeded by regulatory oversight By the late 1950s however pockets of skepticism and resistance had begun to appear The trend picked up steam after 1962 when Rachel Carson s *Silent Spring* directed mainstream attention to the harm modern chemicals were causing in the natural world But it wasn t until the Vietnam War when nearly 40 million gallons of Agent Orange and related herbicides were sprayed to clear the canopy and destroy crops in Southeast Asia that the long term damage associated with this group of chemicals began to attract widespread attention and alarm Using a wide array of sources and an interdisciplinary approach *The Defoliation of America* is organized in three parts Part 1 1945 70 examines the development use and responses to the new chemicals used to control weeds and remove jungle growth As the herbicides became militarized critics increasingly expressed concerns about defoliation in protests over US imperialism in Southeast Asia Part 2 1965 85 profiles three different women who influenced by Rachel Carson challenged the uses of the herbicides in the American West affecting US chemical policy and regulations in the process Part 3 1970 95 revisits the impact and legacies of defoliant use after the Vietnam War From countercultural containment and Nixon s declaration of the War on Drugs to the toxic effects on American and Vietnamese veterans civilians and their children it became increasingly obvious that American herbicides damaged far more than forest canopies With sensitivity to the role gender played in these various protests Hay s study of the scientists health and environmental activists and veterans who fought US chemical regulatory policies and practices reveals the mechanisms obligations and constraints of state and scientific authority in midcentury America Hay also shows how these disparate and mostly forgotten citizen groups challenged the political consensus and were able to shift government and industry narratives of chemical safety *All Health Politics Is Local* Merlin

Chowkwanyun,2022-05-09 Health is political It entails fierce battles over the allocation of resources arguments over the imposition of regulations and the mediation of dueling public sentiments all conflicts that are often narrated from a national top down view In *All Health Politics Is Local* Merlin Chowkwanyun shifts our focus taking us to four very different places New York City Los Angeles Cleveland and Central Appalachia to experience a national story through a regional lens He shows how racial uprisings in the 1960s catalyzed the creation of new medical infrastructure for those long denied it what local authorities did to curb air pollution so toxic that it made residents choke and cry how community health activists and bureaucrats fought over who d control facilities long run by insular elites and what a national coal boom did to community ecology and health *All Health Politics Is Local* shatters the notion of a single national health agenda Health is and has always been political shaped both by formal policy at the highest levels and by grassroots community battles far below

Controversies in Science and Technology Daniel Lee Kleinman,Abby J. Kinchy,Jo Handelsman,2014 Discusses the issues surrounding several current scientific debates including food policy ecosystem management chemical health and infrastructure **Vertebrate Endocrinology** David O. Norris,James A. Carr,2013-05-04 *Vertebrate Endocrinology*

represents more than just a treatment of the endocrine system it integrates hormones with other chemical bioregulatory agents not classically included with the endocrine system It provides a complete overview of the endocrine system of vertebrates by first emphasizing the mammalian system as the basis of most terminology and understanding of endocrine mechanisms and then applies that to non mammals The serious reader will gain both an understanding of the intricate relationships among all of the body systems and their regulation by hormones and other bioregulators but also a sense of their development through evolutionary time as well as the roles of hormones at different stages of an animal s life cycle Includes new full color format includes over 450 full color completely redrawn image Features a companion web site hosting all images from the book as PPT slides and jpeg files Presents completely updated and revitalized content with new chapters such as Endocrine Disrupters and Behavioral Endocrinology Offers new clinical correlation vignettes throughout *The Oxford Handbook of Environmental History* Andrew C. Isenberg, 2017 The Oxford Handbook of Environmental History draws on a wealth of new scholarship to offer diverse perspectives on the state of the field **Hazardous Chemicals** Ernst Homburg, Elisabeth Vaupel, 2019-08-01 Although poisonous substances have been a hazard for the whole of human history it is only with the development and large scale production of new chemical substances over the last two centuries that toxic manmade pollutants have become such a varied and widespread danger Covering a host of both notorious and little known chemicals the chapters in this collection investigate the emergence of specific toxic pathogenic carcinogenic and ecologically harmful chemicals as well as the scientific cultural and legislative responses they have prompted Each study situates chemical hazards in a long term and transnational framework and demonstrates the importance of considering both the natural and the social contexts in which their histories have unfolded *Altered Earth* Julia Adeney Thomas, 2022-03-31 This landmark essay collection explains the Anthropocene as a scientific concept and as a human dilemma showing how it limits our future but liberates our imaginations [A Cultural History of Chemistry in the Modern Age](#) Peter J. T. Morris, 2023-12-14 A Cultural History of Chemistry in the Modern Age covers the period from 1914 to the present The impact of chemistry and the chemical industry on science war society and the economy has made this era the Chemical Age Having prospered in the West chemical science spread across the globe and slowly became more diversified in terms of its ethnic and gendered mix After flourishing for sixty years the chemical industry was impacted by the Oil Crisis of the 1970s and became almost invisible in the West While the industry has clearly delivered many benefits to society such as new materials and better drugs it has been excoriated by critics for its impact on the environment The 6 volume set of the Cultural History of Chemistry presents the first comprehensive history from the Bronze Age to today covering all forms and aspects of chemistry and its ever changing social context The themes covered in each volume are theory and concepts practice and experiment laboratories and technology culture and science society and environment trade and industry learning and institutions art and representation Peter J T Morris is Honorary Research Associate at the Science Museum London and at

those desires Albritton Jonsson and Wennerlind argue that this idea was developed by thinkers such as Francis Bacon Samuel Hartlib Alfred Marshall and Paul Samuelson who laid the groundwork for today's hegemonic politics of growth Yet proponents of infinite growth have long faced resistance from agrarian radicals romantic poets revolutionary socialists ecofeminists and others These critics including the likes of Gerrard Winstanley Dorothy Wordsworth Karl Marx and Hannah Arendt embraced conceptions of scarcity in which our desires rather than nature must be mastered to achieve the social good In so doing they dramatically reenvisioned how humans might interact with both nature and the economy Following these conflicts into the twenty first century Albritton Jonsson and Wennerlind insist that we need new sustainable models of economic thinking to address the climate crisis Scarcity is not only a critique of infinite growth but also a timely invitation to imagine alternative ways of flourishing on Earth
