Vocabulary: cutbank, discharge, erosion, flood, floodplain, meander, meandering river, oxbow lake, point bar, river speed, sediments, slope, streambank, streambed, tributary, weathering

Prior Knowledge Questions (Do these BEFORE using the Gizmo.)

1. The image above shows a raging mountain river in full **flood**. What do you think is making the water brown in color? The water is brown because the sediments it is carrying
2. What impact do you think the flooding river will have on the surrounding landscape? The river will deteriorate or erode the riverbanks and deposit the sand over time.

Gizmo Warm-up

If you stand by the bank of a river, it may seem that very little is happening. But over thousands and even millions of years, rivers can have a profound effect on the landscape. In the *River Erosion* Gizmo, you will see how rivers move materials and how they affect landscapes.

To begin, check that **Mountain stream** and **Short-term erosion** are selected. The Gizmo shows a typical stream that is moving through a hilly area.

1. The two movie cameras (**1** and **2**) allow you to observe different parts of the stream up close.
Click on the left movie camera. What do you see? Large rocks on the streambed, pebbles in the water, and a fish ✓
2. **Sediments** are small rock fragments such as sand or pebbles. What evidence do you see that sediments are being transported? Sediments (particles) are flowing left to right with the current (white box) ✓
3. Now select the right movie camera to see the bank of the mountain stream. What is happening to sediments on the bank? The bank is eroding and sediments are falling into the stream ✓

Save and Grow - A technical guide to agricultural practices in Zambia Food and Agriculture Organization of the United Nations, 2021-10-14 This guide has been developed for extension officers in both the public and the private including those interested in agricultural development in Zambia The goal of this manual is to serve as a tool that allows readers to access up to date information about various agricultural practices and their advantages and disadvantages There are many organisations in Zambia that have programs that aim towards sustainable development in the agricultural sector Amongst these programs there are many different approaches to the goal of improving livelihoods Although these various programs have good reasons for promoting their specific methods this manual aims to take an independent stance to portray what all of them offer and why This manual also includes significant information about new approaches and traditional farmer practices or conventional farming methods The central theme in this manual is that there can never be only one way to achieve a goal under such diverse conditions as are found in agriculture Although a certain amount of benefit can be gained by rigid guidelines to agricultural practice for example a specific crop spacing tillage method or fertilizer recommendation the diverse factors that affect peoples decisions relate to economic social and environmental conditions make such guidelines impractical in many cases

Dear GLOBE Teachers: Globe Program, Teacher's Guide, Globe, 1997 Supplement, 1997 Federal Register, 1992 *Advancing the forest and water nexus* Food and Agriculture Organization of the United Nations, 2019-10-18 Forests are intrinsically linked to water forested watersheds provide 75 percent of our accessible freshwater resources Millennium Ecosystem Assessment 2005 and both forest and water resources are relevant to the achievement of all 17 Sustainable Development Goals Despite the important interlinkages the forest water nexus is often unaccounted for in policy and planning For example three quarters of forests are not managed for soil and water conservation which poses a fundamental challenge to achieving sustainable and resilient communities and ecosystems It is paramount to employ an integrated approach to forest and water resources in management and policy that takes into account the complexity and contextual nature of forest water relationships To achieve this we must improve our understanding of

forest water relationships within local contexts and at different scales as well as our ability to design implement and learn from landscape approaches that both rely on these forest water relationships and impact them In this context FAO s Forest and Water Programme has developed a module based capacity development facilitation guide for project and community stakeholders involved in forest water and natural resource management to ensure we apply our knowledge to better manage forests and trees for their multiple benefits including water quantity quality and the associated socio economic benefits that people within and outside forests so heavily depend on
