Fat-Soluble Vitamins: Biochemistry and Clinical Applications Lucy Taylor,2023-09-26 Vitamins are organic molecules and essential micronutrients that are required by organisms in small quantities for appropriate functioning of their metabolism Essential nutrients are usually not synthesized or if at all are synthesized in insufficient quantities in the body of organisms Therefore organisms must obtain vitamins through proper diet The majority of vitamins contain groups of related molecules known as vitamers For instance vitamin E has eight vitamers comprising four tocotrienols and four tocopherols In humans 13 vitamins are found They are vitamins A E C K D B1 B5 B9 B2 B12 B3 B7 and B9 The vitamins are classified as being either fat soluble or water soluble based on their solubility Vitamins A D E and K are fat soluble vitamins whereas all others are water soluble The fat soluble vitamins are absorbed by the body along with the fats They are stored within the liver and the fatty tissue This book explores the biochemistry and clinical applications of vitamins Those in search of information to further their knowledge on fat soluble vitamins will be greatly assisted by it
