Water System Science And Policy Interfacing Water System Science And Policy Interfacing:

Water System Science and Policy Interfacing Philippe Quevauviller, 2009-11-20 Recent discussions among scientists and policy makers have highlighted that knowledge generated by many research and demonstration projects is not reaching policymakers in an efficient way Conversely the consideration of research results by the policy making community is not straightforward and difficulties arise in integrating the latest research developments in legislation The difficulty is enhanced by the fact that the policy making community is not defining its role as client sufficiently well and the dialogue and communication channels are far from ideal to ensure an efficient flow of information An increasing number of experts consider that improvements could be achieved through the development of a science policy interface so that R D results are synthesised in a way to efficiently feed policy implementation and that short medium and long term research needs may be identified This book examines the issue of integrating science into policy with an emphasis on water system knowledge and related policies An important feature of the book is the discussion of science policy interfacing needs illustrated by examples from authors from different countries in relation to water system management This publication is timely in that the science policy interfacing is now identified as a key challenge worldwide with regard to integrated water resource management and therefore the book will be of great interest to scientists water managers and stakeholders Readers will also benefit from a better understanding of the needs benefits and drawbacks of an established transfer mechanism of scientific outputs to policies

Risk-Informed Management of European River Basins Jos Brils, Werner Brack, Dietmar Müller-Grabherr, Philippe Négrel, Jan E. Vermaat, 2013-08-23 The growing impacts of economic activities and climate change on the conditions of rivers throughout the world require a new integrated approach towards river basin management an approach that can also cope with an uncertain future In this volume leading European scientists and representatives of major stakeholder groups present risk informed management as this new approach as developed in the European Commission funded project RISKBASE It aims to improve the ecological quality of river basins and thus to sustain the goods and services they provide for the benefit of society Risk informed management involves the integrated application of three key principles Being well informed Managing adaptively Pursuing a participatory approach The authors explain and underpin these principles in detail offer inspiring examples from practice and connect them to the implementation of the European Water Framework Directive WFD This book is intended for scientists consultants and practitioners concerned about river basins world wide as well as the drafters and implementers of the WFD River Basin Management Plans
