Toxicology Kevin Woodward,Tim Marrs,2024-05-01 Neurotransmitters are usually considered to be endogenous substances that are released from neurons act on receptor sites that are typically present on membranes of postsynaptic cells and produce a functional change in the properties of the target cell They are essential features of the nervous systems of all animals and numerous chemicals can act as neurotransmitters either intentionally e g pesticides or unintentionally neurotoxins The most common forms of neurotoxicity are the death of neurons degeneration of axons damage to glial cells and interference with the axonal membrane or neurotransmission Important neurotoxins are found among pesticides metals solvents natural substances and industrial chemicals Environmental chemicals may also contribute to the pathology of neurodevelopmental neuropsychiatric and neurodegenerative disorders Neurotransmitters and Toxicology will be particularly appealing to toxicologists interested in neurotoxicology in various sub disciplines as well as neuro chemists interested in pathology and disease mechanisms associated with neurotoxicants Regulatory Toxicology in the European

Union Tim Marrs,Kevin Woodward,2018-02-21 Consumer and environmental protection depend on the careful regulation of all classes of chemicals Toxicology is the key science used to evaluate safety and so underpins regulatory decisions on chemicals With the growing body of EU legislation involved in chemical regulation there is a concomitant need to understand the toxicological principles underlying safety assessments Regulatory Toxicology in the European Union is the first book to cover regulatory toxicology specifically in Europe It addresses the need for a wider understanding of the principles of regulatory toxicology and their application and presents the relationship between toxicology and legislative processes in regulating chemical commodities across Europe This title has a broad scope covering historical and current chemical regulation in Europe the role of European agencies and institutions and also the use of toxicology data for important classes of chemicals including human and veterinary medicines animal feed and food additives biocides pesticides and nanomaterials This book is therefore extremely pertinent and timely in the toxicology field at present This book is an essential reference for regulatory authorities industrialists academics undergraduates and postgraduates working within safety and hazards toxicology the biological sciences and the medicinal and pharmaceutical sciences across the European Union

Ecotoxicology and Genotoxicology Marcelo L Larramendy,2017-07-05 The potential impact of anthropogenic pollutants such as agrochemicals on the environment is of global concern Increasing use of certain compounds can result in contamination of food water and atmospheric systems and in order to combat this pollution it is important to be able to accurately monitor the short and long term effects This book describes the latest aquatic species models used as indicators of the toxic effects of environmental pollutants including models that have not routinely been used The book enables

understanding of the effects of pollutants in non target species and therefore enables analysis of the effects on ecosystems This book will be of interest to anyone interested in developing new biomarker species with high degrees of ecological relevance It will serve as a useful resource for regulatory and research toxicologists particularly those studying freshwater marine water and sediment environments Toxicogenomics in Predictive Carcinogenicity Michael D.
