Training Manual For A M109a6:

Abbreviated Assessment of Embedded Training for the Howitzer Improvement Program M109A6 Howitzer

Aaron W. Schopper, 1990, Tactics, Techniques, and Procedures for M109A6 Howitzer (Paladin) Operations (FM 3-09.70) Department Army, 2012-12-01 Field manual FM 3 09 70 6 70 is focused on Paladin unique battalion battery platoon and section operations. It sets forth the doctrine pertaining to organization equipment command and control C2 operations and tactics techniques and procedures TTP for Paladin units. It establishes the duties and responsibilities of key Paladin battery personnel for field operations. FM 3 09 70 is written for the Paladin battery and platoon as well as for the battalion commander and staff. It is designed to be used in conjunction with the appropriate FM 6 series FM 71 3 equipment technical manuals TMs Army training and evaluation program ARTEP mission training plans MTPs and soldiers manuals. This FM supplements doctrine and TTP outlined in FM 6 50 TTP for the Field Artillery Cannon Battery and FM 6 20 1 TTP for the Field Artillery Battalion. As applicable, those TTPs for Paladin operations which do not differ significantly from those described in FM 6 50 or FM 6 20 1 are not repeated in this manual. FM 3 09 70 ties the doctrinal approach with the training strategies outlined in the associated ARTEP 6 037 30 MTP Mission Training Plan for the Consolidated Cannon Battery M102 M119 M198 M109A5 M109A6. Refer to ARTEP 6 037 30 MTP for specific time standards regarding Paladin operations and fire missions. Crusader Battle Lab Warfighting Experiment (BLWE) 1: Assessing Tactics, Techniques, and Procedures (TTPs) for Crusader Units Within a Synthetic Environment, 1998. The U S Army Research Laboratory and the Depth and Simultaneous Attack Battle Lab have performed the first Battle Lab Warfighting Experiment that evaluated operational concepts for the Crusader system. The experiment was conducted during June and July of 1996 in the Janus Battle Simulation Center at Ft Sill Oklahoma. The research addressed critical operation issues focused on the employment of the Crusader system on the 21st century digitized battlefield. Command and control and ammunition logistics and resupply systems used by a direct support field artillery battalion when employing the simulated Crusader system were evaluated to identify innovative tactics techniques and procedures that could be introduced in conjunction with the fielding of the Crusader system. This research was conducted using a synthetic battlefield environment that placed field artillerymen into distributed interactive simulation technologies where they used actual tactical data processing equipment to perform fire support functions. There were four major outcomes of this research: 1. A preliminary set of tactics techniques and procedures that addressed command and control functions, situation awareness, fire order consistency and sustainment was identified. This information will be evaluated further by the system developer and field artillery community and will be considered for additional testing during later experiments or closed loop studies. 2. Major findings were: a. The Crusader system as currently specified will deliver effective fires to defeat the projected threat and provide timely support to maneuver forces. b. The pooled resupply concept was successfully demonstrated and shown to be a robust technique in the face of losses of individual
