Tourism Mobilities Development Sparsely Populated:

Tourism, Mobilities, and Development in Sparsely Populated Areas Doris Carson, Dean Carson, Linda Lundmark, 2017-10-02 Tourism mobilities are not restricted to the movement of tourists between places of origin and destinations. Particularly in more peripheral remote or sparsely populated destinations workers and residents are also likely to be frequently moving between locations. Such destinations attract seasonal or temporary residents sometimes with only loose ties to the tourism industry. These flows of mobile populations are accompanied by flows of other resources money knowledge ideas and innovations which can be used to help the economic and social development of the destination. This book examines key aspects of the human mobilities associated with tourism in sparsely populated areas and investigates how new mobility patterns inspired by technological economic political and social change provide both opportunities and risks for those areas. Examples are drawn from the northern peripheries of Europe and the north of Australia and the book provides a framework for continuing research into the role that tourism and new mobilities can play in regional development in these locations. This book was originally published as a special issue of the Scandinavian Journal of Hospitality and Tourism.

Handbook on Tourism and Rural Community Development Heather Mair, 2023-01-20 This Handbook brings together experts from around the world to reflect critically on the relationship between tourism and rural community development. Tourism Destination Evolution Patrick Brouder, Salvador Anton Clavé, Alison Gill, Dimitri Ioannides, 2016-07-15 Outlining the need for fresh perspectives on change in tourism this book offers a theoretical overview and empirical examples of the potential synergies of applying evolutionary economic geography EEG concepts in tourism research. EEG has proven to be a powerful explanatory paradigm in other sectors and tourism studies has a track record of embracing adapting and enhancing frameworks from cognate fields. EEG approaches to tourism studies complement and further develop studies of established themes such as path dependence and the Tourism Area Life Cycle. The individual chapters draw from a broad geographical framework and address distinct conceptual elements of EEG using a diverse set of tourism case studies from Europe North America and Australia. Developing the theoretical cohesion of tourism and EEG this volume also gives non specialist tourism scholars a window into the possibilities of using these concepts in their own research. Given the timing of this publication it has great potential value to the wider tourism community in advancing theory and leading to more effective empirical research.
