Chapter 5

Highway Safety

5.1

Explain the difference between short-term and long-term driver expectancy, and provide an example of each.

Expectancy is the ability of drivers to rely on past experience to assist with control, guidance, or navigation tasks. When driver expectancy is taking into consideration in the design of roadways, the negative effect of the driver's limitations in processing information is reduced because drivers only need to process new information.

Examples of long-term expectancies are:

- Freeway exists are located on the right-hand side of the road
- At an intersection of a major and minor road controlled by a stop sign, the stop sign is on the approaches of the road that appears to be the minor road
- At an intersection approach, a driver wishing to turn left will be in the left lane or on a through lane that allows left-turns

Examples of short-term expectancies:

- A long section of roadway with gently winding characteristics is contiguous with a roadway section that has gentle curves
- A long section of roadway that allows for high speed driving is contiguous with a roadway sections that also allows for high speed driving
- Driving at a consistent speed along a well coordinated system of traffic signals on an arterial should not suddenly lead to an isolated intersection with a significantly different cycle length

5.2

Briefly explain the steps in the roadway safety management process as outlined in the *Highway Safety Manual*.

Department of Transport Systems and Traffic Engineering at the Faculty of Transport of the Silesian University of Technology The conference was held on 16-18 September 2019 in Katowice Poland *Fundamentals of Traffic Engineering* Ricardo G. Sigua, 2008 The book covers basic concepts that a senior civil engineering student is expected to understand thoroughly It is also written as a handy self-contained reference or easy guide for practicing traffic and transportation engineers Only through a firm grasp and systematic application of basic knowledge and theories could we truly come up with credible and effective solutions to our transport problems and traffic woes There is nothing more gratifying than having the field of traffic engineering help build communities characterized by efficiency order and safety **Manual of Transportation Engineering Studies** H. Douglas Robertson, Institute of Transportation Engineers, 1994 The primary focus of the manual is on how to conduct transportation engineering studies in the field Each chapter introduces the type of study and describes the methods of data collection the types of equipment used the personnel and level of training needed the amount of data required the procedures to follow and the techniques available to reduce and analyze the data Applications of the collected data or information are discussed only briefly The focus is on planning the study preparing for field data collection executing the data collection plan and reducing and analyzing of the data Guidelines for both oral and written presentation of study results are offered **Civil Engineering** Donald G. Newnan, 2004 This volume is a study guide for the civil engineer taking the PE exam Solved problems throughout each chapter reinforce the concepts discussed in the text

Distribution Methods and Transition Designs James A. Bonneson, 1964 **Risk, Reliability and Safety: Innovating Theory and Practice** Lesley Walls, Matthew Revie, Tim Bedford, 2016-11-25

The safe and reliable performance of many systems with which we interact daily has been achieved through the analysis and management of risk. From complex infrastructures to consumer durables, from engineering systems and technologies used in transportation, health, energy, chemical, oil, gas, aerospace, maritime, defence and other sectors, the management of risk during design, manufacture, operation and decommissioning is vital. Methods and models to support risk informed decision making are well established but are continually challenged by technology innovations, increasing interdependencies and changes in societal expectations. Risk, Reliability and Safety contains papers describing innovations in theory and practice contributed to the scientific programme of the European Safety and Reliability conference ESREL 2016 held at the University of Strathclyde in Glasgow, Scotland, 25-29 September 2016. Authors include scientists, academics, practitioners, regulators and other key individuals with expertise and experience relevant to specific areas. Papers include domain specific applications as well as general modelling methods. Papers cover evaluation of contemporary solutions, exploration of future challenges and exposition of concepts, methods and processes. Topics include human factors, occupational health and safety, dynamic and systems reliability modelling, maintenance optimisation, uncertainty analysis, resilience assessment, risk and crisis management.
