Titan II A History Of A Cold War Missile Program:

Titan II David Stumpf, 2000-01-01 The Titan II ICBM intercontinental ballistic missile program was developed by the United States military to bolster the size strength and speed of the nation's strategic weapons arsenal in the 1950s and 1960s Each missile carried a single warhead the largest in U S inventory used liquid fuel propellants and was stored and launched from hardened underground silos The missiles were deployed at basing facilities in Arkansas Arizona and Kansas and remained in active service for over twenty years Since military deactivation in the early 1980s the Titan II has served as a reliable satellite launch vehicle This is the richly detailed story of the Titan II missile and the men and women who developed and operated the system David K Stumpf uses a wide range of sources drawing upon interviews with and memoirs by engineers and airmen as well as recently declassified government documents and other public materials Over 170 drawings and photographs most of which have never been published enhance the narrative The three major accidents of the program are described in detail for the first time using authoritative sources Titan II will be welcomed by librarians for its prodigious reference detail by technology history professionals and laymen and by the many civilian and Air Force personnel who were involved in the program a deterrent weapons system that proved to be successful in defending America from nuclear attack

To Reach the High Frontier Roger D. Launius, Dennis R. Jenkins, 2014-07-11 Access no single word better describes the primary concern of the exploration and development of space Every participant in space activities civil military scientific or commercial needs affordable reliable frequent and flexible access to space To Reach the High Frontier details the histories of the various space access vehicles developed in the United States since the birth of the space age in 1957 Each case study has been written by a specialist knowledgeable about the vehicle described and places each system in the larger context of the history of spaceflight The technical challenge of reaching space with chemical rockets the high costs associated with space launch the long lead times necessary for scheduling flights and the poor reliability of the rockets themselves show launch vehicles to be the space program's most difficult challenge

The Development of Propulsion Technology for U.S. Space-Launch Vehicles, 1926-1991 J. D. Hunley, 2013-03-15 In this definitive study J D Hunley traces the program's development from Goddard's early rockets and the German V 2 missile through the Titan IVA and the Space Shuttle with a focus on space launch vehicles Since these rockets often evolved from early missiles he pays considerable attention to missile technology not as an end in itself but as a contributor to launch vehicle technology Focusing especially on the engineering culture of the program Hunley communicates this very human side of technological development by means of anecdotes character sketches and case studies of problems faced by rocket engineers He shows how such a highly adaptive approach enabled the evolution of a hugely complicated technology that was impressive but decidedly not rocket science Unique in its single volume coverage of the evolution of launch vehicle technology from 1926 to 1991 this meticulously researched work will inform scholars and engineers interested in the history of technology and

innovation as well as those specializing in the history of space flight **High frontier fall 04** , *Command and Control*
Eric Schlosser, 2013-09-17 The Oscar shortlisted documentary *Command and Control* directed by Robert Kenner finds its origins in Eric Schlosser's book and continues to explore the little known history of the management and safety concerns of America's nuclear arsenal A devastatingly lucid and detailed new history of nuclear weapons in the U S Fascinating Lev Grossman TIME Magazine Perilous and gripping Schlosser skillfully weaves together an engrossing account of both the science and the politics of nuclear weapons safety San Francisco Chronicle A myth shattering exposé of America's nuclear weapons Famed investigative journalist Eric Schlosser digs deep to uncover secrets about the management of America's nuclear arsenal A groundbreaking account of accidents near misses extraordinary heroism and technological breakthroughs *Command and Control* explores the dilemma that has existed since the dawn of the nuclear age How do you deploy weapons of mass destruction without being destroyed by them That question has never been resolved and Schlosser reveals how the combination of human fallibility and technological complexity still poses a grave risk to mankind While the harms of global warming increasingly dominate the news the equally dangerous yet more immediate threat of nuclear weapons has been largely forgotten Written with the vibrancy of a first rate thriller *Command and Control* interweaves the minute by minute story of an accident at a nuclear missile silo in rural Arkansas with a historical narrative that spans more than fifty years It depicts the urgent effort by American scientists policy makers and military officers to ensure that nuclear weapons can't be stolen sabotaged used without permission or detonated inadvertently Schlosser also looks at the Cold War from a new perspective offering history from the ground up telling the stories of bomber pilots missile commanders maintenance crews and other ordinary servicemen who risked their lives to avert a nuclear holocaust At the heart of the book lies the struggle amid the rolling hills and small farms of Damascus Arkansas to prevent the explosion of a ballistic missile carrying the most powerful nuclear warhead ever built by the United States Drawing on recently declassified documents and interviews with people who designed and routinely handled nuclear weapons *Command and Control* takes readers into a terrifying but fascinating world that until now has been largely hidden from view Through the details of a single accident Schlosser illustrates how an unlikely event can become unavoidable how small risks can have terrible consequences and how the most brilliant minds in the nation can only provide us with an illusion of control Audacious gripping and unforgettable *Command and Control* is a tour de force of investigative journalism an eye opening look at the dangers of America's nuclear age

Minuteman David K. Stumpf, 2021-02-26 In *Minuteman A Technical History of the Missile That Defined American Nuclear Warfare* David K Stumpf demystifies the intercontinental ballistic missile program that was conceived at the end of the Eisenhower administration as a key component of the US nuclear strategy of massive retaliation Although its nuclear warhead may have lacked power relative to that of the Titan II the Minuteman more than made up for this in terms of numbers and readiness to launch making it the ultimate ICBM *Minuteman* offers a fascinating look at the technological

breakthroughs necessary to field this weapon system that has served as a powerful component of the strategic nuclear triad for more than half a century With exacting detail Stumpf examines the construction of launch and launch control facilities innovations in solid propellant lightweight inertial guidance systems and lightweight reentry vehicle development and key flight tests and operational flight programs all while situating the Minuteman program in the context of world events In doing so the author reveals how the historic missile has adapted to changing defense strategies from counterforce to mutually assured destruction to sufficiency *The Journal of Military History*, 2001 *History of Rocketry and Astronautics* Otfried G. Liepack, 2009 *DEFCON-2* Norman Polmar, John D. Gresham, 2006-01-17 Presents a detailed description of the events issues and personalities involved in the lead up to the Cuban Missile Crisis and the fateful thirteen days in October offering an incisive analysis of one of the pivotal events of the Cold War **Cold War** Wayne Cocroft, Roger J. C. Thomas, 2003 In the early 1950s the historian Professor William Hoskins in his pioneering work *The making of the English landscape* lamented what he saw as the devastation of the countryside by scientists the military and politicians He saw his world as dominated by the obscene shape of the atom bomber laying a trail like a filthy slug upon Constable's and Gainsborough's sky England of the Nissen hut the pre fab and the electric fence of the high barbed wire around some unmentionable devilment A generation later this book reveals what lay behind the fence and how the sites are now in dereliction a new aspect of the complex landscape history of Britain **To Defend and Deter** John Clayton Lonnquest, 1996 **Weapons of Mass Destruction [2 volumes]** Eric A. Croddy, James J. Wirtz, Jeffrey A. Larsen, 2004-12-22 The first accessible reference to cover the history context current issues and key concepts surrounding biological chemical and nuclear weapons **On Alert** David N. Spires, 2012 **Preludes to U.S. Space-launch Vehicle Technology** J. D. Hunley, 2008 *Preludes to U S Space Launch Vehicle Technology* is devoted primarily to military hardware and traces the evolution of missile technology from the 1920s through the 1970s when the Minuteman III became operational Hunley discusses individual innovations technology transfer management systems and the organizations that were involved in the research and development of a wide range of rockets and missiles including the German V 2 Redstone Atlas Thor Jupiter Titan I and II and Polaris He also humanizes the subject through numerous anecdotes and sketches of such fascinating individuals as Robert H Goddard Werner von Braun Bernard Schriever and Red Raborn among others **BOOK JACKET Encyclopedia of Flight: Guidance systems - Sputnik** Tracy Irons-Georges, 2002 *The Encyclopedia of Flight* bridges the gap between theoretical concepts and practical applications between scientific information and historical issues This three volume work provides information about animal and human made flight in a way that is accessible to high school and undergraduate students general readers and aviation enthusiasts It examines a wide range of topics from birds and balloons to jets and spacecraft **America, History and Life**, 2002 Provides historical coverage of the United States and Canada from prehistory to the present Includes information abstracted from over 2 000 journals published worldwide **U.S. Space-launch Vehicle Technology** J. D. Hunley, 2008 For nearly

fifty years a wide range of missiles and rockets has propelled U S satellites and spacecraft into the sky J D Hunley s two volume work traces the evolution of this technology from Robert Goddard s research in the 1920s through the development of the Titan missiles and launch vehicles in the 1960s to the refinement of the space shuttle in the 1980s With the first book devoted primarily to military hardware and the second to launch vehicle hardware Hunley offers a sweeping overview of these impressive engineering innovations as well as insights into the dynamic personalities responsible for them Together the two volumes offer a unique invaluable history of rocketry that should appeal to a wide range of scholars and space buffs

American Book Publishing Record ,2000-07 *How NASA Learned to Fly in Space* David Michael Harland,2004 The social context in which NASA learned to fly in space with an explicit mandate to reach the moon set against a tight deadline is described in this historical analysis The Last Thirty Seconds David K. Stumpf,2024-09-09 In March 1983 as the world s superpowers continued aggressively stockpiling nuclear weapons President Ronald Reagan described his vision for a world no longer confronted with the concept of mutually assured destruction A year later the Strategic Defense Initiative was established followed soon after by the creation of the Strategic Defense Initiative Organization SDIO The SDIO was tasked with the development and coordination of missile technologies designed for the strategic defense against civilization s most dangerous invention one that carried with it the threat of nuclear destruction intercontinental ballistic missiles In *The Last Thirty Seconds A Brief History of the Evolution of Hit to Kill Technology* David K Stumpf details the development of one of many possible solutions for ballistic missile defense commonly known as hit to kill Hit to kill is a nonnuclear technique using kinetic energy rather than explosives to destroy reentry vehicles carrying chemical biological or nuclear warheads It is the centerpiece of the United States current ballistic missile defense systems and has proven invaluable in the conflict between Ukraine and Russia as well as in the ongoing conflict with the Houthi rebels in the Red Sea While much of the subject remains classified this detailed study will be welcomed for its substantial references and the inclusion of newly declassified material
