

The background of the book cover is a composite image. The upper portion features a vibrant, swirling nebula in shades of blue, purple, and white against a dark cosmic background. The lower portion shows a perspective view of a two-lane asphalt road with a white dashed center line, receding into the distance under a hazy, orange-tinted sky.

Taylor, 2008-02-20 Para Inquiry represents the next generation of postmodern studies Focusing on cultural studies religion and literature Victor E Taylor provides us with a fresh look at the history and main themes of postmodernism both in style and content Central to the book is the status of the sacred in postmodern times Taylor explores the sacred images in art

culture and literature We see that the concept of the sacred is uniquely singular and resistant to an easy assimilation into artistic cultural or narrative forms Anyone wishing to gain a new and exciting understanding of postmodernism will read this book with great pleasure **Stochastic Interacting Systems in Life and Social Sciences** Nicolas Lanchier,2024-07-01

This volume provides an overview of two of the most important examples of interacting particle systems the contact process and the voter model as well as their many variants introduced in the past 50 years These stochastic processes are organized by domains of application epidemiology population dynamics ecology genetics sociology econophysics game theory along with a flavor of the mathematical techniques developed for their analysis **Chaos in Discrete Dynamical Systems** Ralph Abraham,Laura Gardini,Christian Mira,2013-06-29 Chaos Theory is a synonym for dynamical systems theory a branch of mathematics Dynamical systems come in three flavors flows continuous dynamical systems cascades discrete reversible dynamical systems and semi cascades discrete irreversible dynamical systems Flows and semi cascades are the classical systems introduced by Poincare a century ago and are the subject of the extensively illustrated book Dynamics The Geometry of Behavior Addison Wesley 1992 authored by Ralph Abraham and Shaw Semi cascades also known as iterated function systems are a recent innovation and have been well studied only in one dimension the simplest case since about 1950 The two dimensional case is the current frontier of research And from the computer graphics of the leading researcher come astonishing views of the new landscape such as the Julia and Mandelbrot sets in the beautiful books by Heinz Otto Peigen and his co workers Now the new theory of critical curves developed by Mira and his students and Toulouse provide a unique opportunity to explain the basic concepts of the theory of chaos and bifurcations for discrete dynamical systems in two dimensions The materials in the book and on the accompanying disc are not solely developed only with the researcher and professional in mind but also with consideration for the student The book is replete with some 100 computer graphics to illustrate the material and the CD ROM contains full color animations that are tied directly into the subject matter of the book itself In addition much of this material has also been class tested by the authors The cross platform CD also contains a software program called ENDO which enables users to create their own 2 D imagery with X Windows Maple scripts are provided which give the reader the option of working directly with the code from which the graphics in the book were

The Encyclopaedia Britannica: Fra to Har, 1910 Sense of Emptiness Pernilla Hallonsten, Marina Shchepetunina, Junichi Toyota, 2011-12-08 Human perception is often believed to function holistically especially in the tradition of Gestalt psychology involving a focused item and its surrounding This holistic approach can allow us to explain something that is not directly experienced in our perception meaning that the absence as well as the presence of something can have a significant impact on how we perceive the world The way we perceive the presence is more or less the same cross culturally but the prominence of the absence or what is termed emptiness in this volume varies considerably from one culture to another The aim of this volume is to identify what emptiness is like and how different cultures incorporate this concept

from various perspectives It turns out that emptiness plays a key role in identifying socio cultural diversity in a broader sense including arts and languages This volume consists of contributions from different fields covering a wide range of topics such as history literary studies mythology film studies architecture linguistics social anthropology ethnology and cognitive science Due to the range covered in this volume studies presented here are highly interdisciplinary but all chapters deal with the sense of emptiness which suggest that the underlying idea of the significance of emptiness is pervasive Yet this topic has not previously been systematically compared across different disciplines It is hoped that this volume will offer a first overview of the pervasiveness and integration of disciplines concerning the sense of emptiness
