Toxicity Testing In The 21st Century A Vision And A Strategy:

Toxicity Testing in the 21st Century National Research Council, Division on Earth and Life Studies, Institute for Laboratory Animal Research, Board on Environmental Studies and Toxicology, Committee on Toxicity Testing and Assessment of Environmental Agents, 2007-11-05 Advances in molecular biology and toxicology are paving the way for major improvements in the evaluation of the hazards posed by the large number of chemicals found at low levels in the environment The National Research Council was asked by the U S Environmental Protection Agency to review the state of the science and create a far reaching vision for the future of toxicity testing The book finds that developing improving and validating new laboratory tools based on recent scientific advances could significantly improve our ability to understand the hazards and risks posed by chemicals This new knowledge would lead to much more informed environmental regulations and dramatically reduce the need for animal testing because the new tests would be based on human cells and cell components Substantial scientific efforts and resources will be required to leverage these new technologies to realize the vision but the result will be a more efficient informative and less costly system for assessing the hazards posed by industrial chemicals and pesticides

Medicine, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Endocrine-Related Low-Dose Toxicity, 2017-07-14 To safeguard public health the US Environmental Protection Agency EPA must keep abreast of new scientific information and emerging technologies so that it can apply them to regulatory decision making For decades the agency has dealt with questions about what animal testing data to use to make predictions about human health hazards how to perform dose response extrapolations how to identify and protect susceptible subpopulations and how to address uncertainties As alternatives to traditional toxicity testing have emerged the agency has been faced with additional questions about how to incorporate data from such tests into its chemical assessments and whether such tests can replace some traditional testing methods Endocrine active chemicals EACs have raised concerns that traditional toxicity testing protocols might be inadequate to identify all potential hazards to human health because they have the ability to modulate normal hormone function and small alterations in hormone concentrations particularly during sensitive life stages can have lasting and significant effects To address concerns about potential human health effects from EACs at low doses this report develops a strategy to evaluate the evidence for such low dose effects **Information Resources in**

A Systems Biology Approach to Advancing Adverse Outcome Pathways for Risk Assessment Natàlia Garcia-Reyero, Cheryl A. Murphy, 2018-02-24

Social pressure to minimize the use of animal testing the ever increasing concern on animal welfare and the need for more human relevant and more predictive toxicity tests are some of the drivers for new approaches to chemical screening This book focuses on The Adverse Outcome Pathway an analytical construct that describes a sequential chain of causally linked events at different levels of biological organization that lead to an adverse health or ecotoxicological effect While past efforts have focused on toxicological pathway based vision for human and

ecological health assessment relying on in vitro systems and predictive models The Adverse Outcome Pathway framework provides a simplified and structured way to organize toxicological information Within the book a systems biology approach supplies the tools to infer link and quantify the molecular initiating events and the key events and key event relationships leading to adverse outcomes The advancement of these tools is crucial for the successful implementation of AOPs for regulatory purposes
