Donald E. Knuth, 2022-10-11 The Art of Computer Programming is Knuth's multivolume analysis of algorithms. With the addition of this new volume it continues to be the definitive description of classical computer science. Volume 4B, the sequel to Volume 4A, extends Knuth's exploration of combinatorial algorithms. These algorithms are of keen interest to software designers because a single good idea can save years or even centuries of computer time. The book begins with coverage of Backtrack Programming together with a set of data structures whose links perform delightful dances and are ideally suited to this domain. New techniques for important applications such as optimum partitioning and layout are thereby developed. Knuth's writing is playful and he includes dozens of puzzles to illustrate the algorithms and techniques ranging from popular classics like edge matching to more recent crazes like sudoku. Recreational mathematicians and computer scientists will not be disappointed. In the second half of the book Knuth addresses Satisfiability, one of the most fundamental problems in all of computer science. Innovative techniques developed at the beginning of the twenty-first century have led to game-changing applications for such things as optimum scheduling, circuit design, and hardware verification. Thanks to these tools, computers are able to solve practical problems involving millions of variables that only a few years ago were regarded as hopeless. The Mathematical Preliminaries Redux section of the book is a special treat which presents basic techniques of probability theory that have become prominent since the original preliminaries were discussed in Volume 1. As in every volume of this remarkable series, the book includes hundreds of exercises that employ Knuth's ingenious rating system, making it easy for readers of varying degrees of mathematical training to find challenges suitable to them. Detailed answers are provided to facilitate self-study. Professor Donald E. Knuth has always loved to solve problems. In Volume 4B he now promotes two brand new and practical general problem solvers: namely 0, the Dancing Links Backtracking, and 1, the SAT Solver. To use them, a problem is defined declaratively: 0 as a set of options or 1 in Boolean formulae. Today's laptop computers, heavily armoured with very high-speed processors and ultra-large amounts of memory, are able to run either solver for problems having big input data. Each section of Volume 4B contains a multitudinous number of tough exercises which help make understanding surer. Happy reading. Eiiti Wada, an elder computer scientist, UTokyo. Donald Knuth may very well be a great master of the analysis of algorithms, but more than that, he is an incredible and tireless storyteller who always strikes the perfect balance between theory, practice, and fun. Volume 4B: Combinatorial Algorithms, Part 2, dives deep into the fascinating exploration of search spaces, which is quite like looking for a needle in a haystack or even harder: to prove the absence of a needle in a haystack where actions performed while moving forward must be meticulously undone when backtracking. It introduces us to the beauty of dancing links for removing and restoring the cells of a matrix in a dance which is both simple to implement and very efficient.
