The Informed Brain in a Digital World National Academies Keck Future Initiative,2013-05-06 Digital media provide humans with more access to information than ever before a computer tablet or smartphone can all be used to access data online and users frequently have more than one device However as humans continue to venture into the digital frontier it remains to be known whether access to seemingly unlimited information is actually helping us learn and solve complex problems or ultimately creating more difficulty and confusion for individuals and societies by offering content overload that is not always meaningful Throughout history technology has changed the way humans interact with the world Improvements in tools language industrial machines and now digital information technology have shaped our minds and societies There has always been access to more information than humans can handle but the difference now lies in the ubiquity of the Internet and digital technology and the incredible speed with which anyone with a computer can access and participate in seemingly infinite information exchange Humans now live in a world where mobile digital technology is everywhere from the classroom and the doctor s office to public transportation and even the dinner table

This paradigm shift in technology comes with tremendous benefits and risks Interdisciplinary Research IDR Teams at the 2012 National Academies Keck Futures Initiative Conference on The Informed Brain in the Digital World explored common rewards and dangers to Humans among various fields that are being greatly impacted by the Internet and the rapid evolution of digital technology Keynote speaker Clifford Nass of Stanford University opened the dialogue by offering insight into what we already know about how the information overload of the digital world may be affecting our brains Nass presented the idea of the media budget which states that when a new media emerges it takes time away from other media in a daily time budget When additional media appear and there is no time left in a person's daily media budget people begin to double book media time Personal computers tablets and smartphones make it easy to use several media simultaneously and according to Nass this double booking of media can result in chronic multitasking which affects how people store and manage memory Although current fast paced work and learning environments often encourage multitasking research shows that such multitasking is inefficient decreases productivity and may hinder cognitive function National Academies Keck Future Initiative The Informed Brain in a Digital World summarizes the happenings of this conference

Neurotechnology James Giordano, 2012-04-26 New technologies that allow us to investigate mechanisms and functions of the brain have shown considerable promise in treating brain disease and injury These emerging technologies also provide a means to assess and manipulate human consciousness cognitions emotions and behaviors bringing with them the potential to transform society

Artificial General Intelligence 2008 P. Wang, B. Goertzel, S. Franklin, 2008-02-18 The field of Artificial Intelligence AI was initially directly aimed at the construction of thinking machines that is computer systems with human like general intelligence But this task proved more difficult than expected As the years passed AI researchers gradually shifted focus to producing AI systems that intelligently approached specific tasks in relatively narrow domains In recent years however more and more AI researchers have recognized the necessity and the feasibility of returning to the original goal of the field Increasingly there is a call to focus less on highly specialized narrow AI problem solving systems and more on confronting the difficult issues involved in creating human level intelligence and ultimately general intelligence that goes beyond the human level in various ways Artificial General Intelligence AGI as this renewed focus has come to be called attempts to study and reproduce intelligence as a whole in a domain independent way Encouraged by the recent success of several smaller scale AGI related meetings and special tracks at conferences the initiative to organize the very first international conference on AGI was taken with the goal to give researchers in the field an opportunity to present relevant research results and to exchange ideas on topics of common interest In this collection you will find the conference papers full length papers short position statements and also the papers presented in the post conference workshop on the sociocultural ethical and futurological implications of AGI
