Toxoplasma Gondii The Model Apicomplexan Perspectives And Methods:

Toxoplasma Gondii Louis M. Weiss, Kami Kim, 2011-04-28 Toxoplasmosis is caused by a one celled protozoan parasite known as *Toxoplasma gondii*. In the United States it is estimated that approximately 30% of cats the primary carriers have been infected by *T. gondii*. Most humans contract toxoplasmosis by eating cyst contaminated raw or undercooked meat vegetables or milk products or when they come into contact with the *T. gondii* eggs from cat feces while cleaning a cat's litterbox, gardening or playing in a sandbox. Approx 1 in 4 more than 60 million people in the USA are infected with the parasite and in the UK between 0.5 and 1% of individuals become infected each year. By the age of 50 40% of people test positive for the parasite. The predilection of this parasite is for the central nervous system (CNS) causing behavioral and personality alterations as well as fatal necrotizing encephalitis and is especially dangerous for HIV infected patients. Though there have been tremendous strides in our understanding of the biology of *Toxoplasma gondii* in the last decade there has been no systemic review of all of the information that has accumulated. *Toxoplasma gondii* provides the first comprehensive summary of literature on this organism by leading experts in the field who were responsible for organising the 7th International Congress on Toxoplasmosis in May 2003. It offers systematic reviews of the biology of this pathogen as well as descriptions of the methods and resources used. Within the next year the *T. gondii* genome will be completed making this an indispensable research resource for biologists, physicians, parasitologists and for all those contemplating experiments using *T. gondii*. Serves as a model for understanding invasion of host cells by parasites, immune response, motility, differentiation, phylogenetics, evolution and organelle acquisition. Discusses the protocols related to genetic manipulation, cell biology and animal models while also providing reference material on available resources for working with this organism.

Toxoplasma Gondii Louis M. Weiss, 2013-08-10 This 2e of *Toxoplasma gondii* reflects the significant advances in the field in the last 5 years including new information on the genomics, epigenomics and proteomics of *T. gondii* as well as a new understanding of the population biology and genetic diversity of this organism. *T. gondii* remains the best model system for studying the entire Apicomplexa group of protozoans which includes Malaria, making this new edition essential for a broad group of researchers and scientists. Toxoplasmosis is caused by a one celled protozoan parasite known as *T. gondii*. The infection produces a wide range of clinical syndromes in humans, land and sea mammals and various bird species. Most humans contract toxoplasmosis by eating contaminated raw or undercooked meat, particularly pork, vegetables or milk products by coming into contact with the *T. gondii* eggs from cat feces or by drinking contaminated water. The parasite damages the ocular and central nervous systems causing behavioral and personality alterations as well as fatal necrotizing encephalitis. It is especially dangerous for the fetus of an infected pregnant woman and for individuals with compromised immune systems such as HIV infected patients. Completely updated the 2e presents recent advances driven by new information on the genetics and genomics of the pathogen. Provides the latest information concerning the epidemiology

diagnosis treatment and prevention of toxoplasmosis Offers a single source reference for a wide range of scientists and physicians working with this pathogen including parasitologists cell and molecular biologists veterinarians neuroscientists physicians and food scientists **Molecular Detection of Human Parasitic Pathogens** Dongyou Liu,2012-07-05

Traditionally laboratory identification of parasites has relied upon various phenotypic procedures that detect their morphological biological and immunological features Because these procedures tend to be time consuming and technically demanding molecular methods based on nucleic acid amplification technologies have been increasingly utilized
